

The Curling Club, New Jackson , Manchester

Sustainability Policy 2025-6

This policy helps The Curling Club to:

- Consider the resource impacts of our activities
- Consider the integration of sustainability into the services we offer our clients and guests
- Consider how we support and participate in the communities in which we operate
- Consider our obligations to secure the well-being of future generations

Our sustainability policy is based upon the following 10 principles:

- Encouraging our waste handlers, both internal and external, towards a 'zero to landfill' aspiration.
- Compliance with applicable legislation and adoption of appropriate codes of practice.
- Integrating sustainability concepts and opportunities into our everyday business decisions.
- Making key suppliers aware of our Sustainability Policy and encouraging them to adopt sustainable management practices.
- Ensuring that all staff are aware of our Sustainability Policy and embrace its principles.
- Regularly reviewing this policy as the business evolves, ensuring it continues to be in line with current best practice.

Our Sustainability Strategy: Practical Steps

To put policy principles into practice, we will strive towards the following actions:

1. Nominate at least one Member of staff for sustainability and environmental matters/issues, who can be a first point of contact for sustainability/environmental issues and provide guidance/assistance for using company property, equipment and assets to the maximum efficiency.
2. Use collaborative technologies such as video conferencing or teleconferencing wherever possible to reduce business travel.
3. Encourage greater use of public transport for staff and customers

4. Reduce the energy consumption of office equipment by investing in energy-efficient equipment.
5. Minimise our use of paper and other office consumables.
6. Recycle all possible waste. Work with cleaning providers / Venue's to establish the full waste stream availability.
7. Carefully evaluate the potential benefits of single-use items as well as robust products with built in longevity.
8. Seek to work with local suppliers and support the local economy whenever possible.
9. Seek to collaborate with partners who can help develop innovative approaches to sustainability.
