Dear, Declan

Good Morning

Please see info below re the waste process at the Nightingale

The Nightingale is an intermediary care unit situated within the grounds of Wythenshawe hospital; an extension of the current unit is being added - is this correct?

They currently have their own secure external satellite waste store that both clinical and general waste are stored in. The hospital's FM provider collects all the waste on a daily basis and transfers it to the main waste compound.

The Waste contractor collects the waste from this central store on the following frequency:

Clinical waste 2x daily 7 days per week.

Domestic general twice per week

Any WEEE or adhoc waste streams on a call off basis.

Currently the waste is collected 5 days a week from the Nightingale, Monday to Friday, will there be any increase in the operational hrs?

The above will continue throughout the development and after completion. There is sufficient capacity to accommodate any increase in both the satellite & main waste compound. / As part of the scheme the size of the satellite waste store will be increased in line with occupancy to ensure that the satellite store has sufficient capacity is that correct, I would also like to check the positioning of the waste store to ensure the driver can access.

Please let me know if there is anything else I can help with.

Thanks Karen
