Box Four Development

Local Employment Outcomes

Apprenticeships

We have worked with external partners to support the use of apprenticeships for the Box Four development. During the development we have recruited 1 Quantity Surveyor apprentice, the apprenticeship is through LSP – Learning Skills Partnership.

Work Placements

We have provided 1 work placement for the Box Four development, the placement has given the individual the opportunity to obtain a basic knowledge of the construction industry and understating of the different roles within a main contractor organisation. McLaren will be looking to support the individual in the form of an apprenticeship later in the year.

School/College Engagement

We have undertaken 1 school engagement visit; this was at Trinity High School in Manchester. The visit focused on providing pupils awareness of the potential career opportunities within the construction industry and career pathways.

Further Employment Opportunities

McLaren Construction continue to engage with the Wythenshawe local market/job centre with the aim to prioritise people who are long term unemployed, hard to reach and groups who are under-represented in the construction industry.

Local Labour

McLaren Construction utilise BioSite to track the travel distance for person days worked by operatives travelling to site. This is broken down in the adjacent table, with over 50% traveling 40miles or less.
