

“Inform us which bins are to be provided (size and number), where the bins will be stored, who will manage and move the bins to a collection point, where is the collection point and which waste collection services will be utilised and how many collections there will be per week. This will be considered by our colleagues in Highways and Environmental Health.”

153 Hamilton Rd - Waste Management Plan

Currently we have

- 2 x 240 litre black bins
- 1 x larger blue bin (480 litre?)
- 1 x 240 litre brown bin
- 1 x larger brown bin (480 litre?)
- 1 x 240 litre green bin

This meets the guidance for 6-10 people (we have 7) for all bins except green food waste / garden waste

As we have no garden our is just for food and this is ample for our needs

As you can see from the picture we have ample space for another bin but it's not needed

The bins are always stored in the front yard

I, John Blaylock or my tenant Jucelene Ramos take responsibility for putting bins out every Thursday night and collecting them every Friday

The collection point is on the stree outside the house

We have collections every fortnight and we utilise all the collection services

At our house we often help out with neighbours bins and pick up excess rubbish from the street as the streets in this neighbourhood are really bad for litter.
