Report Title:	**Xaverian College, New Science Block** **Validation Completion Report**
Report Reference:	**10961G-WML-XX-ZZ RP-G-0003**
Client:	**Seddon Construction Ltd**
Issue Date:	**20th June 2025**
Drafted By:	**T P Booth**
Checked By:	**S C Seddon**
Authorised By:	**S C Seddon**

This document has been prepared for the titled project (or named part thereof) and should not be relied upon or used for any other project without an independent check being carried out as to its suitability and prior written authorization being obtained from WML Consulting. WML accepts no responsibility or liability for the consequences of the use of this document, wholly or in part, for any other purpose than that for which it was commissioned. Any persons so using or relying upon this document for such other purpose do so at their own risk.

This report was prepared for the sole use of the Client and shall not be relied upon or transferred to any other party without the express written authorisation of WML. It may contain material subject to copyright or obtained subject to license; unauthorised copying of this report will be in breach of copyright/license.

The findings and opinions provided in this document are given in good faith and are subject to the limitations imposed by employing site assessment methods and techniques, appropriate to the time of investigation and within the limitations and constraints defined within this document. The findings and opinions are relevant to the dates when the assessment was undertaken, but should not necessarily be relied upon to represent conditions at a substantially later date.

The findings and opinions conveyed in this report are based on information obtained from a variety of sources as detailed and which WML assumes to be reliable, but has not been independently confirmed. Therefore, WML cannot and does not guarantee the authenticity or reliability of third party information it has relied upon.

Where opinions expressed in this report are based on current available guidelines and legislation, no liability can be accepted by WML for the effects of any future changes to such guidelines and legislation.

The limitations of liability of WML for the contents of this document have been agreed with the Client, as set out in the terms and conditions of offer and related contract documentation.

1.0 INTRODUCTION

Appointment

1.1 WML Consulting (WML) has been commissioned by Seddon Construction Ltd to prepare a Validation Report in relation to development of a new Science Block within the existing Xaverian College campus.

Proposed Development

1.2 The project comprises the construction of a new building located on the south western corner of the existing College Campus.

1.3 The new build 3-storeys structure is to provide student science labs and associated accommodation. The building is located on the former Sunbury Building footprint which was demolished as part of these works.

1.4 The new structure and landscaping is outlined on drawing 713-STO-00-00-DR-L-0005 in Appendix 01.

Background

1.5 WML were initially commissioned by AA Projects on behalf of Xaverian College to undertake a Phase 1 Desk Study and Phase 2 Investigation and Assessment. These culminated in the following reports.

- Phase 1 Desk Study and Preliminary Geoenvironmental Assessment, Reference 10961G-WML-00-XX RP-G-0001, dated March 2023.
- Phase 2 Geo-environmental Investigation and Assessment, reference 10961G-WML-XX-ZZ-RP-G-0002-A, dated June 2023.

1.6 The reports have been presented to Manchester City Council Planning Division in support of Planning Application No. 137030/FO/2023.

1.7 Due to the lack of contamination other than a thin layer of ashy made ground no specific Remediation Strategy was required.

1.8 However, this report presents the compilation of the validation information obtained during the redevelopment programme associated with the capping of landscaped areas as identified within the Phase 2 Geo-environmental Investigation and Assessment.

2.0 SUMMARY OF ENVIRONMENTAL CONDITIONS

2.1 The following paragraphs summarise the most relevant findings of the Phase 1 and Phase 2 reports.

2.2 The BGS plans indicate that the site is underlain by the Devensian Glacial Till, indicated to mainly comprise clay locally interbedded with sands and gravels. The drift deposits are indicated to be underlain by the Triassic Chester Peddle Beds Formation, indicated to comprise sandstone.

2.3 The site is not in a Radon Affected Area as defined by the UK Health Security Agency were less than 1% of properties are above the Action Level of exposure. Therefore, no radon protection measures are necessary for new structures as described in publication BR211 by the Building Research Establishment.

2.4 The bedrock underlying the site is classified as a 'Principal Aquifer'. The superficial strata is classified as a 'Secondary Undifferentiated Aquifer'.

2.5 The site is located within an Environment Agency Zone 3 Total Catchment SPZ although no groundwater abstraction licenses are located within 500m of the site. There are no surface watercourses recorded within 250m of the site or surface water abstractions within 500m of the site.

2.6 There are no active landfills located within 500m of the site or historic landfills located within 250m of the site. A petrol filling station is located 243m north-west at 10 Wilmslow Road.

2.7 The earliest map dated 1849 indicates the site to comprise undeveloped land within Rusholme Park. By 1891 the site had been developed as 'Sunbury', with a centrally located detached residential structure surrounded by gardens and glasshouses to the north-east. By 1934 the structure had become part of Xaverian College and has remained roughly unchanged to present day with the exception of a small extension to the northern elevation sometime in the late 1990's or early 2000's.

Ground Conditions

2.8 Ground conditions encountered during the intrusive investigation generally comprised made ground to depths of between 0.70m and 1.10mbgl, underlain by glacial till to maximum proven depth of 4.00mbgl.

2.9 No visual and/or olfactory evidence of significant ground contamination was identified within the exploratory holes during the investigation.

2.10 Groundwater was not encountered during the formation of the exploratory holes, however groundwater monitoring to date has recorded perched groundwater at depths of between 1.04 and 3.61mbgl. Standpipes installed within WS01 and WS03 were noted to be dry during the first visit. True phreatic ground water levels are assumed to be at depths beyond the base of the exploratory holes.

2.11 Chemical analysis indicated localised exceedances of CoC's within the Made Ground, when compared to the current LQM/CIEH Suitable 4 Use Levels (S4ULs) reference values for a commercial end use. These relate to localised concentrations of Benzo[b]fluoranthene (55mg/kg – 72mg/kg compared to the reference value of 44mg/kg), Benzo[a]pyrene (57mg/kg – 67mg/kg compared to the reference value of 35mg/kg) and Dibenzo[a,h]anthracene (5.3mg/kg – 7.3mg/kg compared to the reference value of 3.6mg/kg) within samples of shallow made ground all obtained from 0.20mbgl.

2.12 No asbestos was encountered within any of the samples analysed either before or after demolition had occurred.

2.13 Risks to controlled waters from the site were considered low with no specific environmental remediation considered necessary.

Ground Gas Monitoring

2.14 Ground gas monitoring, primarily for methane and carbon dioxide, with associated flow rates, was undertaken on 6no occasions, between 18th May and 13th September 2023.

2.15 The results indicate the presence of methane concentrations ranging from below the instrument limit of detection of 0.1% by volume in air (v/v), to a maximum peak and steady state of 1.8% v/v. All detectable concentrations of methane were recorded within WS02 during four of the six monitoring rounds. Concentrations of steady state carbon dioxide ranged from 0.7 to 12.9%, with concentrations in excess of 5% all within WS01 and WS02.

2.16 Within WS01 and WS02 peak flow rates of up to 104.7 l/hr were recorded which quickly reduced to steady state flows ranging from below detectable limits of <0.1 to 0.1 l/hr. In consideration of the water levels during the monitoring visits with the peak flows such are considered to represent pumping conditions, where the perched water is at or close to the unslotted section of the standpipe, rather than to reflect the presence of a source of gas generation.

2.17 In consideration of the lack of viable ground gas generation sources, such as mine workings, active or historic landfills, natural or made ground with significant organic / deleterious materials within the site or surrounding areas it was considered that the steady state carbon dioxide concentrations recorded in excess of 5% are considered likely to be the result of biological respiration within the glacial till and therefore are not considered to indicate the presence of a significant source of ground gas. Although concentrations of methane marginally exceeded 1% v/v, during the first three of six visits (and within WS02 only), the low steady state flows and the low concentrations would be unlikely to be exceeded.

2.18 Wilson and Card (GGIS Sheet 1) note that "during biological respiration in the glacial till there may also be trace amounts of methane up to about 3% caused by anaerobic decomposition in small anaerobic hotspots or the reduction of carbon dioxide by methanogens. Oxygen concentrations may be depleted but in this scenario oxygen deficient air is not likely to be emitted quickly from the ground and it does not pose a risk".

2.19 Therefore, on the basis that no evidence of sources of significant gas generation were identified within the site, it was considered that the classification of CS1 – very low risk was applicable to the development. As such no specific gas mitigation measures were required.

3.0 SUMMARY OF REMEDIATION OBJECTIVES

3.1 The following objectives were outlined in the Phase 2 Geo-environmental Investigation and Assessment.

Capping Requirements for Private Gardens

3.2 As the level of contamination in the Made Ground renders it unsuitable for direct use beneath proposed landscaped areas, development will need to include the provision of a clean cover over the Made Ground to break the direct contact pollution linkage as set out below.

3.3 Therefore, new landscaped areas will need to be capped with a nominal 450mm clean cover over the existing Made Ground to break the direct contact pollution linkage. The make-up of the 450mm cover would be expected to consist of:

- 150mm of clean imported Topsoil;
- 300mm of clean imported sub-soil.

3.4 The following were to be provided.

- Results of subsequent chemical analysis of imported Topsoil/sub-soil to confirm compliance with the Site Specific Assessment Criteria.
- Records of the volumes and suitability of all imported fill, Topsoil and sub-soil delivered to site in the form of delivery slips and certificates.
- Photographic evidence of suitable sub-soil/Topsoil cover in landscaped areas.

General

3.5 The following additional information was also to be provided.

- Details of any unexpected ground contamination and the measures undertaken to deal with this, to include records of excavation, the results of chemical analysis resulting from the removal of contaminated soil and / or groundwater.
- Sample waste management records confirming compliance with Duty of Care regulations.
- Confirmation of potable water supply pipe materials.

3.6 On completion of the Remediation Works, a Validation Report including the information as summarised above was to be submitted to the Local Planning Authority for approval.

4.0 VALIDATION

Unforeseen Ground Contamination

4.1 No evidence of contamination, unusual ground conditions, organic materials such as peat, and/or asbestos have been reported to WML during the construction phase of the works.

4.2 Furthermore, no evidence of such was reported by WML during periodic visits to site to inspect the building construction works.

General Groundworks

4.3 Due to the low levels of contamination within the existing topsoil and made ground, together with the limited site area, all site-derived soils were removed from site to an appropriate landfill.

4.4 The waste transfer documents provided by Seddon Construction are presented in Appendix 06.

Imported Topsoil / Subsoil

4.5 No suitable site-won topsoil or subsoil was available for re-use at the site for the capping of proposed garden areas. Therefore, all topsoil required for use as capping soil was imported to site from Marchington Stone Ltd. Delivery tickets indicating the import of 2no loads of topsoil are presented in Appendix 05.

4.6 Chemical analyses of 1no topsoil sample from the source is presented in Appendix 04. Comparison of these results with the Assessment Criteria for 'commercial' as provided within Appendix 07, indicates that the relevant criteria were not exceeded.

4.7 After import of the capping soils, WML attended site on 5th June 2025 in order to obtain samples from the emplaced soil in order to submit them for chemical analyses.

4.8 During the inspection five samples of the imported topsoil (VP01 – 0.10, VP02 – 0.10 and VP03 – 0.30, VP04 – 0.30m & VP05 – 0.20m) were obtained. The samples, were submitted for chemical analyses and the test results are presented in Appendix 04.

4.9 Comparison of these results with the Assessment Criteria for 'commercial' end-use as provided within Appendix 07, indicates that the relevant criteria were not exceeded.

4.10 Therefore, the soil was considered suitable, in terms of contamination levels, for the intended use.

4.11 Delivery tickets indicate approximately 40 tonnes of topsoil were imported to site, equating to around 25m^3 volume. Sampling and testing of the imported topsoil has therefore been undertaken at a ratio of 1 sample per 5m^3.

Capping Thickness

4.12 The capping thicknesses were verified by the formation of hand excavated validation pits in June 2025.

4.13 Selected photographs of the validation pits are provided in Appendix 02 and indicate between 450mm of topsoil in landscaped areas.

4.14 A drawing showing the locations of the validation pits is presented in Appendix 01.

4.15 The imported topsoil generally comprised a dark brown organic sand.

Water Supply Pipes

4.16 In light of the ground conditions encountered, the requirement for specific materials and measures to protect the water supply from ground contamination was not required. As such it is understood that standard PE pipe has been installed.

5.0 CONCLUSIONS

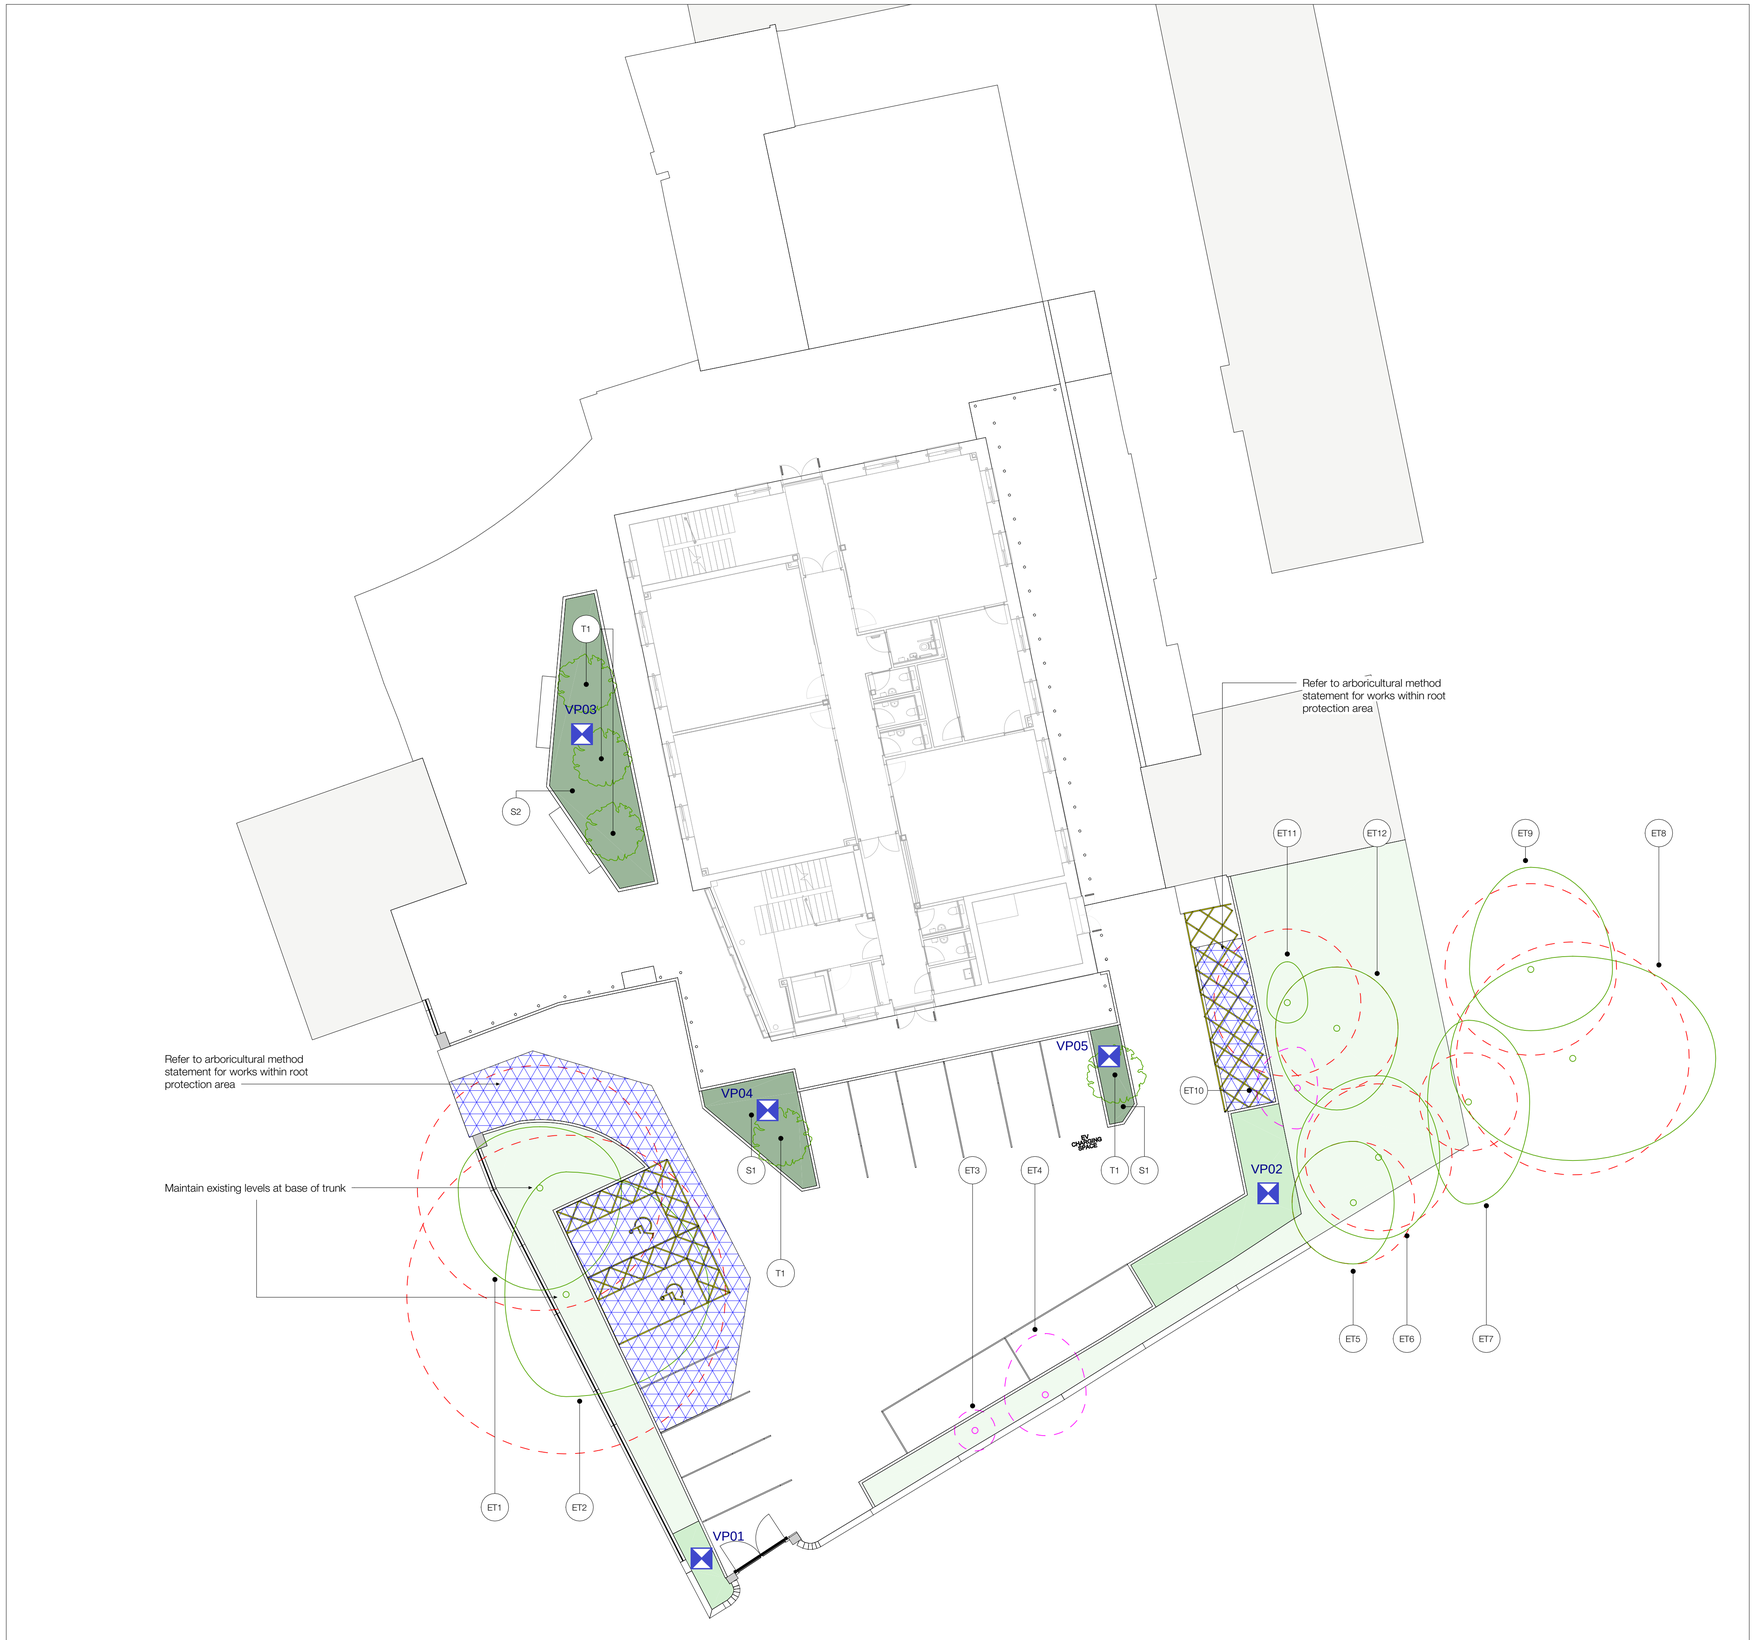

Capping Requirements for Garden / Landscaped Areas

5.1 Clean imported topsoil and subsoil were found to be generally emplaced to depths of at least 450mm. The Topsoil and sub-soil have been confirmed by chemical analysis to generally conform to appropriate site specific assessment criteria.

5.2 Therefore, as far as can be established the pre-occupation works required in relation to the relevant Planning Conditions have been undertaken to a reasonable standard of workmanship and appropriately validated.

Works to existing trees & vegetation

To be read in conjunction with tree survey - Christians Environmental 'Arboricultural impact assessment' 4331-XCSB-BS-AIA-001 Revision A

Works to existing trees and vegetation should be carried out to BS3998:2010 and are to be undertaken only by an Arboricultural Association approved tree surgeon following the appropriate statutory approvals. All works must comply with the Wildlife and Countryside Act (1981) (as amended) and the Conservation of Habitats and Species Regulations (2018) (as amended), which includes the protection of bats and nesting birds.

Code	Species	Common name	Proposed works
ET1	Tilia cordata	-	Retain
ET2	Aesculus hippocastanum	-	Retain
ET3	Chamaecyparis lawsoniana	-	Remove
ET4	Aesculus hippocastanum	-	Remove
ET5	Fraxinus ornus	-	Retain
ET6	Acer pseudoplatanus	-	Retain
ET7	Aesculus hippocastanum	-	Retain
ET8	Betula pubescens	-	Retain
ET9	Betula pendula	-	Retain

DRAWING NOTES

1. Drawing copyright of Stiwdio Owens Limited.
2. All information to be read in conjunction with relevant landscape drawings and specification.
3. Do not scale from this drawing.
4. Only figured dimensions are to be used.
5. All dimensions in metres unless otherwise noted.
6. The Landscape Architect is to be notified of any discrepancies before proceeding.
7. No liability accepted for amendments by others.
8. Utilities - A safe system of work to HSE HSG47 Avoiding danger from underground services to be followed by contractor to plan, detect, identify, mark services and employ safe excavation/ safe digging practices prior to works commencing.
9. Proposed planting locations to be reviewed following detail design of infrastructure requirements including easements for underground or above ground services, overhead power lines, highway safety and visibility splays and other infrastructure provisions, such as substations, refuse stores, lighting, signage and CCTV requirements.
10. Signage - to be provided by others as specified in the Health and Safety (Safety Signs and Signals) Regulations 1996.
11. All parapets, barriers, balustrades and other elements of structure intended to retain, stop or guide people to specialist detail design and to meet the appropriate loading requirements of BS EN 1991-1-1, PD 6688-1-1 and BS 6180.
12. Drawing for the purpose of construction.
13. Maintain and/ or clip back shrubs/ hedges to a maximum height of 600mm and to not impact visibity.

KEY

- Existing grass
- Existing tree canopy (see arboricultural survey)
- Root protection area
- Existing feature to be removed
- Validation pit location

Report Notes

General

•This report shall not be reproduced, except in full, without written approval from Envirolab.
•The client Sample No, Client Sample ID, Depth to top, Depth to Bottom and Date Sampled are all provided by the client and can affect the validity of results.
•The results reported herein relate only to the material supplied to the laboratory.
•The residue of any samples contained within this report, and any received within the same delivery, will be disposed of **four weeks** after the initial scheduling. For samples tested for Asbestos we will retain a portion of the dried sample for a minimum of **six months** after the initial Asbestos testing is completed.
•Analytical results reflect the quality of the sample at the time of analysis only.
•Opinions and Interpretations expressed are outside our scope of accreditation.
•A deviating sample report is appended and will indicate if samples or tests have been found to be deviating. Any test results affected may not be an accurate record of the concentration at the time of sampling and, as a result, may be invalid.
•If a sample is outside of the calibration range or affected by interferences then it may need diluting. This will result in the limit of detection (LOD) being raised.
•Subcontracted Analysis: Please see the appended report for any deviations, current LODs and accreditation status of the test.

Key

Superscript "#"	Accredited to ISO 17025
Superscript "M"	Accredited to MCertS
Superscript "U"	Individual result not accredited
None of the above symbols	Analysis unaccredited
Subscript "A"	Analysis performed on as-received Sample
Subscript "D"	Analysis performed on the dried sample, crushed to pass 2mm sieve.
Subscript "D" on Asbestos	Analysis performed on a dried aliquot of sample provided.
Subscript "^"	Analysis has dependant options against results. Details appear in the comments of your Sample receipt
IS	Insufficient Sample for analysis
US	Unsuitable Sample for analysis
NDP	No Determination Possible
NAD	No Asbestos Detected
Trace	Asbestos found not suitable for Gravimetric Quantification – not enough to accurately weigh.
N/A	Not applicable

Asbestos

Identification: Asbestos in soil analysis is performed on a dried aliquot of the submitted sample and cannot guarantee to identify asbestos if only present in small numbers as discrete fibres/fragments in the original sample.
Stones etc. are not removed from the sample prior to analysis
"Trace Asbestos Identified" will be reported if there is not enough present to verify the type.
Quantification: Generally a 2 stage process including visual identification, hand picking and weighing, and fibre counting. Where ACMs are found a percentage asbestos is assigned to each with reference to 'HSG264, Asbestos: The survey guide' and the calculated asbestos content is expressed as a percentage of the dried soil sample aliquot used. If asbestos is identified as being present but is not in a form that is suitable for analysis by hand picking and weighing (normally if the asbestos is present as free fibres). "TRACE" will be reported as a quantification result.
PLEASE INFORM THE LABORATORY IF YOU WOULD LIKE THE STAGE 3 SEDIMENTATION PROCESS CARRIED OUT. Note this will be subcontracted.

Assigned Matrix Codes

1	SAND	6	CLAY/LOAM	A	Contains Stones
2	LOAM	7	OTHER	B	Contains Construction Rubble
3	CLAY	8	Asbestos Bulk (Only Asbestos ID accredited)	C	Contains visible hydrocarbons
4	LOAM/SAND	9	Incinerator Ash (some Metals accredited)	D	Contains glass / metal
5	SAND/CLAY			E	Contains roots / twigs
Note: 7,8,9 matrices are not covered by our ISO 17025 or MCertS accreditation, unless stated above.					

Soil Chemical Analysis:
All results are reported as dry weight (<40°C).
For samples with Matrix Codes 1 - 6 natural stones, brick and concrete fragments >10mm and any extraneous material (visible glass, metal or twigs) are removed and excluded from the sample prior to analysis and reported results corrected to a whole sample basis. This is reported as '% stones >10mm'.
For samples with Matrix Code 7 the whole sample is dried and crushed prior to analysis and this supersedes any "A" subscripts
All analysis is performed on the sample as received for soil samples which are positive for asbestos or the client has informed asbestos may be present and/or if they are from outside the European Union and this supersedes any "D" subscripts.

TPH by method A-T-007:
For waters, free and visible oils are excluded from the sample used for analysis, so the reported result represents the dissolved phase only.
Results "with Clean up" indicates samples cleaned up with Silica during extraction.

EPH CWG (method A-T-055) from TPH CWG:
EPH CWG results have humics mathematically subtracted through instrument calculation.
Where these humic substances have been identified in any IDs from "TPH CWG with clean up" please note that the concentration is **NOT** included in the quantified results but present in the ID for information.

Electrical Conductivity of water by method A-T-037:
Results greater than 12900µS/cm @ 25^0C / 11550µS/cm @ 20^0C fall outside the calibration range and as such are unaccredited.

Please contact your client manager if you require any further information.

Report Notes

General

•This report shall not be reproduced, except in full, without written approval from Envirolab.
•The client Sample No, Client Sample ID, Depth to top, Depth to Bottom and Date Sampled are all provided by the client and can affect the validity of results.
•The results reported herein relate only to the material supplied to the laboratory.
•The residue of any samples contained within this report, and any received within the same delivery, will be disposed of **four weeks** after the initial scheduling. For samples tested for Asbestos we will retain a portion of the dried sample for a minimum of **six months** after the initial Asbestos testing is completed.
•Analytical results reflect the quality of the sample at the time of analysis only.
•Opinions and Interpretations expressed are outside our scope of accreditation.
•A deviating sample report is appended and will indicate if samples or tests have been found to be deviating. Any test results affected may not be an accurate record of the concentration at the time of sampling and, as a result, may be invalid.
•If a sample is outside of the calibration range or affected by interferences then it may need diluting. This will result in the limit of detection (LOD) being raised.
•Subcontracted Analysis: Please see the appended report for any deviations, current LODs and accreditation status of the test.

Key

Superscript "#"	Accredited to ISO 17025
Superscript "M"	Accredited to MCertS
Superscript "U"	Individual result not accredited
None of the above symbols	Analysis unaccredited
Subscript "A"	Analysis performed on as-received Sample
Subscript "D"	Analysis performed on the dried sample, crushed to pass 2mm sieve.
Subscript "D" on Asbestos	Analysis performed on a dried aliquot of sample provided.
Subscript "^"	Analysis has dependant options against results. Details appear in the comments of your Sample receipt
IS	Insufficient Sample for analysis
US	Unsuitable Sample for analysis
NDP	No Determination Possible
NAD	No Asbestos Detected
Trace	Asbestos found not suitable for Gravimetric Quantification – not enough to accurately weigh.
N/A	Not applicable

Asbestos

Identification: Asbestos in soil analysis is performed on a dried aliquot of the submitted sample and cannot guarantee to identify asbestos if only present in small numbers as discrete fibres/fragments in the original sample.
Stones etc. are not removed from the sample prior to analysis
"Trace Asbestos Identified" will be reported if there is not enough present to verify the type.

Assigned Matrix Codes

1	SAND	6	CLAY/LOAM	A	Contains Stones
2	LOAM	7	OTHER	B	Contains Construction Rubble
3	CLAY	8	Asbestos Bulk (Only Asbestos ID accredited)	C	Contains visible hydrocarbons
4	LOAM/SAND	9	Incinerator Ash (some Metals accredited)	D	Contains glass / metal
5	SAND/CLAY			E	Contains roots / twigs
Note: 7,8,9 matrices are not covered by our ISO 17025 or MCertS accreditation, unless stated above.					

Soil Chemical Analysis:

All results are reported as dry weight (<40°C).
For samples with Matrix Codes 1 - 6 natural stones, brick and concrete fragments >10mm and any extraneous material (visible glass, metal or twigs) are removed and excluded from the sample prior to analysis and reported results corrected to a whole sample basis. This is reported as '% stones >10mm'.
For samples with Matrix Code 7 the whole sample is dried and crushed prior to analysis and this supersedes any "A" subscripts
All analysis is performed on the sample as received for soil samples which are positive for asbestos or the client has informed asbestos may be present and/or if they are from outside the European Union and this supersedes any "D" subscripts.

TPH by method A-T-007:

For waters, free and visible oils are excluded from the sample used for analysis, so the reported result represents the dissolved phase only.
Results "with Clean up" indicates samples cleaned up with Silica during extraction.

EPH CWG (method A-T-055) from TPH CWG:

EPH CWG results have humics mathematically subtracted through instrument calculation.
Where these humic substances have been identified in any IDs from "TPH CWG with clean up" please note that the concentration is **NOT** included in the quantified results but present in the ID for information.

Electrical Conductivity of water by method A-T-037:

Results greater than 12900µS/cm @ 25^0C / 11550µS/cm @ 20^0C fall outside the calibration range and as such are unaccredited.

Please contact your client manager if you require any further information.

APPENDIX 07

Soil Assessment Criteria

Screening Levels for "Commercial" end use assuming a 2.5% SOM for Hydrocarbons.

Contaminant	Screening Levels for Commercial End Use (mg/kg)
Metals	
Arsenic	640
Boron	240,000
Cadmium	190
Chromium III	8,600
Chromium VI	33
Copper	68,000
Lead*	2330
Mercury	58
Nickel	980
Selenium	12,000
Vanadium	9,000
Zinc	730,000
Non Metals	
Phenol	690
Polyaromatic Hydrocarbons (PAHs)	
Benz[a]anthracene	170
Benzo[a]pyrene	35
Benzo[b]fluoranthene	44
Benzo[ghi]perylene	4,000
Benzo[k]fluoranthene	1,200
Chrysene	350
Dibenz[ah]anthracene	3.6
Fluoranthene	23,000
Indeno[123-cd]pyrene	510
Naphthalene	460^{f} $(183)^{sol}$
Pyrene	54,000

Copyright Land Quality Management Limited reproduced with permission; Publication Number S4UL3240. All rights reserved.

* Where not included in the S4UL's criteria for a limited number of contaminants, namely lead, have been derived by DEFRA in their document entitled SP1010: Development of Category 4 Screening Levels for Assessment of Land Affected by Contamination, April 2014.

Contaminant	Screening Levels for Commercial End Use (mg/kg)
Volatile Organic Compounds	
Benzene	47
Ethylbenzene	13,000^{vap} (1220)
Toluene	110,000^{vap} (1920)
M - Xylene	14,000
O - Xylene	15,000
P - Xylene	14,000
Total Petroleum Hydrocarbons	
Aliphatic C5-6	5,900
Aliphatic C6-8	17,000
Aliphatic C8-10	4,800
Aliphatic C10-12	23,000
Aliphatic C12-16	82,000
Aliphatic C16-35	1,700,000
Aliphatic C35 - 44	1,700,000
Aromatic C5 - 7	46,000
Aromatic C7 - 8	110,000
Aromatic C8-10	8,100
Aromatic C10-12	28,000
Aromatic C12-16	37,000
Aromatic C16-21	28,000
Aromatic C21-35	28,000
Aromatic C35 - 44	28,000
