Clean and Protect Services

Nordic Products and Services offer a specialist stone cleaning and protective systems. The unique three-stage deep cleaning, stain removal and protective coating offers a lifespan of up to ten years. Offering comprehensive protection against everyday dirt, oil, grease and even chewing gum, Nordic's three-stage stone cleaning process has been developed to improve aesthetics and reduce the costs associated with public realm cleaning services.

First Stage

Firstly, a hot water wash using Nordic cleaning products to remove every day dirt, grime and grease from the surface.

Secondly, an assessment of the substrate to determine stages 2 and 3 of the process.

Second Stage

Where required, a further treatment of Nordic Restorative Stone Cleaner (RSC) will be applied. This will draw out stubborn stains such as ingrained oils and fats.

Final Stage

The application of Nordic's exclusive, non-toxic, water based Pro-Guard Plus (PGP) protective coating in a single saturated treatment.
