

Roman Gardens Planning Update 08/05/25

Phase one is the instatement of a new pathway east to west. This phase does not encompass street furniture, profile walls or lighting.

It simply removes barriers (fencing) to Bridgewater Street and creates a walkway surface from Stone Street/ Bridgewater Street to the other side which is also Bridgewater Street.

The railing to Bridgewater Street would be removed. As discussed at the meeting with MCC Planning dept today, we would like to **make a non material change to the planning application** which is to add in one or 2 official, MCC removable bollards to stop cars from entering the gardens. This would match the one already in place on the entrance to stone street.

The surface for the path as agreed is Sureset resin in Pearl Jam, this colour has been selected to complement the reddish tones of the gatehouse. The new yorkstone in phase 2 will be flamed as per the agreement (see below) to further compliment the colouration of architecture locally as well as the new path surface.

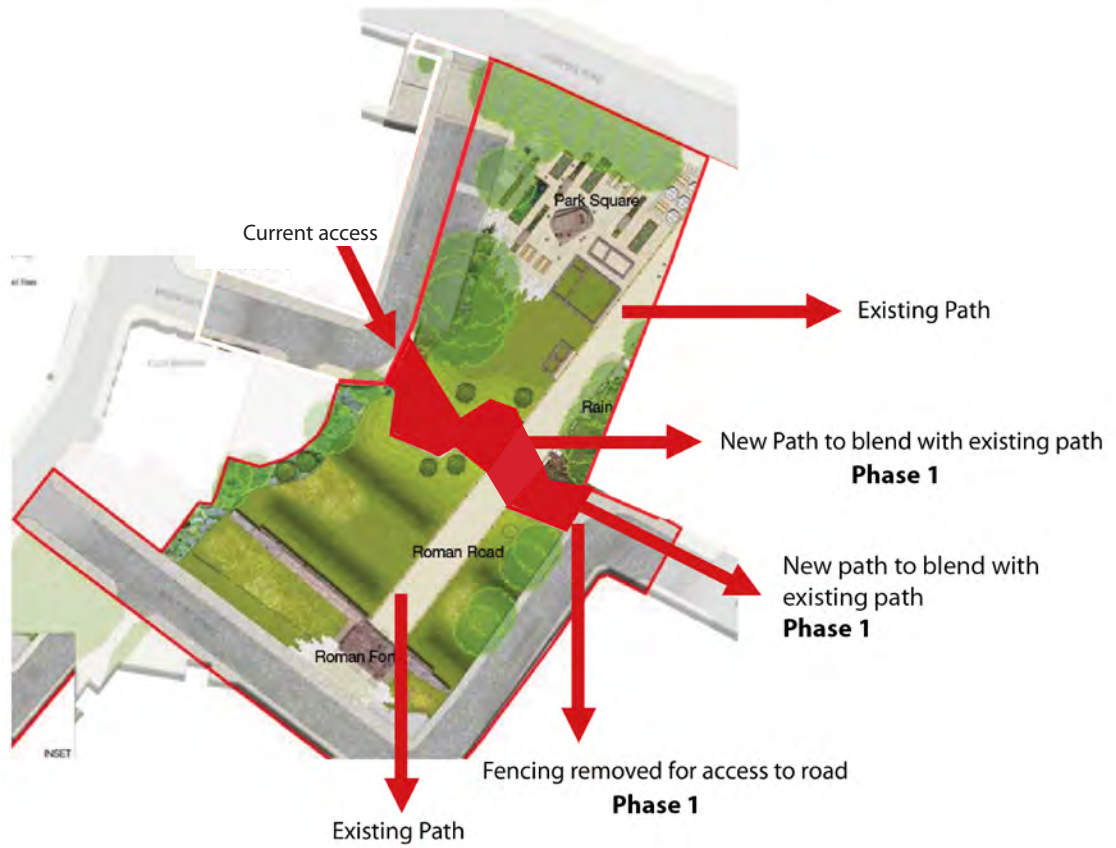

The new pathway will be edged in pressure treated wood to create clean lines and be in keeping with the current edging around the roman ruins.

The wooden boundary will be removed as part of phase 2 when the lighting and all above ground work will be undertaken.

Phase 1- Highlighted in red

Phase 2- Highlighted in red
