

Nest boxes: Sizing and siting

Provide a safe & comfortable home for birds to roost and nest.

Natural nest holes do not come in standard sizes which is why we vary hole size to attract different species.

Siting Guide

- Fix securely between 1.5 m and 5.5 m high.
- Shelter the box from wind, rain and strong sunlight.
- Keep away from bird feeders and other nest boxes as close proximity may promote aggressive behaviour.
- Ensure the box is not easily visible or accessible to predators.

5.5m

1.5m
