

PLANNING STATMENT

March 2025

1. Introduction

- 1.1 This statement has been produced to support an advertisement application submitted by Steve Smith of City Outdoor Media Ltd to introduce a single LED digital advertisement display to replace 1 no backlit 96 sheet advertisement and 2 no backlit 48 sheet advertisements at Aytoun Street, Manchester. The author of this document is planning consultant Susan Jones BA (hons) BPL MEWI, affiliated member of the RIBA. Mrs. Jones has provided planning advice to City Outdoor Media Ltd for well in excess of 10 years and has a career in planning consultancy spanning more than 40 years, including specializing in planning and outdoor advertisement control.
- 1.2 This document considers the visual amenity and transport safety issues associated with the proposal as well as relevant planning policies at local and national level. Consideration is also given to the Town and Country Planning (Control of Advertisements) (England) Regulations 2007 with particular reference to deemed consent opportunities (Class 13 of Schedule 3 Part 1).
- 1.3 This application follows the decision by Manchester City Council on 23rd August 2024 to decline to determine advertisement application 140398/AOH/2024 involving a similar scheme to that now before the council.
- 1.4 This application also follows the refusal of advertisement consent for a proposed materially larger digital advertisement display comprising dimensions 18.6 x 4.65 x 0.265m by Manchester City Council on 14th January 2022 (LPA Ref: 132240/AOH/2021). That proposal, which also included some proposed boundary improvements, was subsequently the subject of appeal reference APP/B4215/Z/22/3294291 which was dismissed by way of a decision letter dated 29th November 2022. That decision notice, which is attached as Appendix A, will be referred to in this statement together with the supporting Transport Issues Statement recently produced by Eddisons and Heritage Reports by Border Archaeology

2. The Proposed Digital Advertising Display

- 2.1 The proposed LED digital display would have the same dimensions as the existing 96 sheet back lit advertisement currently on the site, namely 12.3 x 3.1 x 0.25m. The height above ground level of the proposed advertisement would be the same as the existing display it would replace as shown on submitted drawing 3037 05, be in the same location and have the same orientation. Unlike the existing display which is frameless the proposal would include a frame so that the advertisement display itself would therefore be marginally smaller. Furthermore, an assessment has recently been undertaken by the Applicant's technical adviser concerning how the current level of illumination of the backlit display would compare with the proposed digital display which would automatically adjust to the ambient light level of the surrounding environment during daylight and during the hours of darkness would not exceed 600 cd/m². The assessment document which is submitted in support of this application found that the proposed display would not result in a greater level of illumination than the present situation. The proposed display would operate in exactly the same way, as other similar digital displays the Applicant has introduced within the City Center of Manchester which the council are familiar with.

- 2.2 The supporting Transport Issues Statement sets out at para 2.3.4 how the proposed display would operate involving a seamless change of advertisements no more than every 10 seconds. There would be no moving images and in the event of a problem it would default to a blank screen. There would therefore be no flashing images.
- 2.3 The proposed LED digital display would replace the three existing backlit advertisement displays which are currently located along the boundary of the ECP Car Park adjoining Aytoun Street. The land upon which these displays sit enjoys the benefit of deemed consent under Class 13 of Schedule 3 Part 1 of the aforementioned 2007 advertisement regulations. This deemed consent benefit is a material consideration in the determination of this application and is specifically addressed below.
- 2.4 The technical specification for the proposed display forms Appendix B to this statement. Recently the advertisement displays have been the target of indiscriminate graffiti (see photograph at Appendix C). The Applicant has experience of successfully dealing with unwanted graffiti on his other sites and it is intended that the proposal display will be similarly treated in this case. As part of the proposal which is the subject of this application therefore an anti-graffiti management scheme would be introduced. This would involve the application of a product known as "Stormdry" which can be used on masonry and metal alike and would form a coating. Any graffiti or fly posting which is introduced once the Stormdry coat has been introduced can be removed with ease using a high-pressure washer using cold water. Appendix D includes the specification details of Stormdry. Following the erection of the proposed display, including the application of Stormdry a representative of the Applicant company would visit the site every three months to review the situation and if any graffiti is observed then arrangements would be put in place to have it removed.

3. Deemed Consent

- 3.1 The land upon which the existing advertisement displays sit enjoys the benefit of deemed consent for advertisements by way of Class 13 of Schedule 3 Part 1 of the Town and Country Planning (Control of Advertisements) (England) Regulations 2007. Plate D on page 21 of the supporting Heritage Statement is a photograph of this land and the adjoining car park and its surroundings. At the time the subject land accommodated 2 no 96 sheets and 1 no 48 sheet advertisement displays. The photograph was taken before the extension to the listed City Police Courts was introduced which was in the mid 1990's. Therefore, that photograph was taken at least 30 years ago and therefore well in excess of the last 10-years which must prevail for the land to enjoy deemed consent. The Applicant has knowledge that the land has been used continually for the display of illuminated advertisements with no increase in the extent to which the site has been used for that purpose and also no change in the manner in which it has been used since that time. Furthermore, with respect to previous advertisement applications by the Applicant for this site supporting documents have raised its deemed consent status and the council has never challenged this.

Following the decision by the council to decline to determine previous application 140398/AOH/2024 a Discontinuance Notice was served on the Applicant on 19th November 2024. The Applicant subsequently lodged an appeal against the Discontinuance Notice (PINS reference APP/B4215/G/25/3359189) and a hearing date has now been set for 29th April 2025. The Discontinuance Notice therefore has not come into effect, and should the Appellant's appeal be upheld then the Discontinuance Notice would be quashed. Under these circumstances therefore the continuing use of the land for the display of advertisements should be treated as a material consideration in the determination of this application.

- 3.2 The Inspector in the aforementioned appeal commented at para 9 of the decision letter (Appendix A) the following:

“Far from setting a desirable precedent for the appeal proposal, these pre-existing advertisements carry very limited weight in support of the appeal.”

Mrs. Jones however does not agree with that view. Given that it is the intention of the Applicant to continue to use the subject land for the display of advertisements under deemed consent if this application is unsuccessful then there can be no doubt that it represents a realistic fallback position. A similar set of circumstances prevailed with respect to the proposal which was the subject of appeal APP/B4215/H/14/2222948 (see the decision letter dated 3rd November 2014 at Appendix E) which resulted in the appointed Inspector in that case upholding the appeal on the basis that the existing display which enjoyed deemed consent would remain and what was proposed was not considered materially different to the existing situation. In that case the proposed display was considered in the light of the setting of a Grade II listed railway viaduct and Castlefield Conservation Area with the appointed inspector commenting as follows:

“As the size, scale and location of the advert currently at the appeal site represents the existing situation, I must have regard to it when assessing the appeal scheme before me in relation to the main issue I have referred to above.”

4. Heritage Considerations

- 4.1 This application is accompanied by a comprehensive Heritage Assessment by Border Archaeology dated June 2024. That report assesses the proposed advertisement display in relation to the following heritage assets and concludes the following:

Heritage Impact.

Manchester Crown Court - Grade II*.

Rochdale Boundary Wall to Canal -Grade II

Setting of Whitworth Street Conservation Area.

Assessed Impact

Negligible to Minor

Neutral

Slight/Neutral

The Overall conclusion of the heritage assessment in the light of the proposed advertisement is stated at page 45 as follows:

“It is considered that the overall impact in heritage terms of the proposed replacement of the existing illuminated advertisement with a digital display and

removal of two existing advertisements can be assessed as slight and positive, reflecting its positive effect on the setting of the Grade II Listed Crown Court in terms of opening up hitherto obscured views of the building from Aytoun Street and barely perceptible impact on other nearby heritage assets in the surrounding vicinity."*

4.2 Also accompanying this application is a subsequent Heritage Addendum document produced by Border Archaeology and dated December 2024. That document was issued to address whether the existing displays or the proposed scheme now before the council represents "substantial harm" to the setting of the Grade II* listed building and the Whitworth Street Conservation Area (ie the test with respect to the serving of the aforementioned Discontinuance Notice). The report concluded that none of the scenarios identified would cause substantial harm to the setting of the listed building and nearby conservation area. Furthermore, in connection with the proposed scheme now before the council the view was taken that the setting of the listed building would be enhanced "*particularly in terms of gateway views looking WNW from Piccadilly Station.*"

5. Public Safety

5.1 A Transport Issues Statement has been submitted in support of this application and concludes that there would be no highway safety issues associated with this proposal. Para 4.4.5 states:

"It is therefore considered that the proposals present no greater risk to highway safety than previously consented schemes, which the applicant would address through their acceptance of the standard planning conditions for digital displays..."

Furthermore, at para 14 of the aforementioned 2022 appeal decision (Appendix A) relating to the proposed display which was materially larger than what is now before the council the appointed Inspector stated:

"I acknowledge that the LPA has raised no issues raised in relation to public safety. Whilst I have no reason to depart from this view this is a neutral consideration that does not add weight in favour of the appeal. This application should be determined in the light of the 2007 advertisement regulations which requires that the proposal is considered in the light of public safety."

6. Visual Amenity

6.1 The key issue with respect to this application is the same as that identified by the appointed Inspector at paragraph 5 of the decision letter relating to the earlier proposal (Appendix A) namely:

"...the effect of the proposed digital advertisement on the visual amenity of the surrounding area, with particular regard to the setting of the City Police Courts, a Grade II listed building."*

6.2 Unlike that scheme which comprised a materially larger proposed advertisement than that now proposed the subject advertisement display is now supported by several comprehensive heritage impact assessments. Such assessments consider in detail the visual impact of the proposed advertisement not only on the Grade II* listed Police Courts building but also the Grade II listed Rochdale Boundary Wall to the Rochdale Canal between Chorlton Street and Minshull Street and the Whitworth Street

Conservation Area with the overall conclusion being that the proposed advertisement would have a “*positive effect*”. The author of the Border Archaeology report Stephen Priestley MA MCIFA has extensive experience of compiling heritage impact assessments and prior to joining Border Archaeology he was employed as a researcher for English Heritage and a research consultant for Cadw and British Waterways. His heritage knowledge and experience therefore are

considerable and should be treated as superior to those of Inspector J M Tweedle BSc (Hons) MSc (Dist) MRTPI who dealt with the aforementioned appeal and produced the decision letter which is attached as Appendix A stating at paragraph 15:

“The appellant relies heavily on extracts from a heritage statement prepared in 2016 and submitted as part of a planning application to support the development of a neighbouring site. However, that assessment was made to support a proposal for 478 residential units and commercial space. Therefore, given its age and purpose, it is of little relevance to the appeal before me.”

6.3 The aforementioned appeal decision relating to a similar proposal involving similar issues is also helpful in relation to the consideration of this proposal (Appendix E). For example, the Inspector commented at paragraph 11 as follows:

“Taking into account the existing advert at the site, I consider that the proposal would not lead to an increase in visual clutter as it would not be materially different to the existing situation. This is also because there is already a degree of visual clutter in the area, such as highway signs, that one would expect to find within a busy city environment.”

6.4 In comparison, the Application Site adjoins a busy highway and Metro train lines with associated highway signage. Furthermore, digital advertisement displays have recently been introduced at the corner of Auburn Street and Aytoun Street and another on the east side of Aytoun Street, both of which include moving images (referred to on page 29 of the Heritage Assessment). Furthermore, given that the proposal involves the replacement of the existing display with a digital display of similar size, location, and orientation the author of this document fails to see how a different view to that of the Dawson Street appeal Inspector who considered that it would not represent a material change could be justified.

6.5 As far as relevant planning policies are concerned, with the exception of the SRF document relating to the Aytoun Street Campus site, they are largely the same as those associated with the Dawson Street appeal with the appointed Inspector confirming at paragraph 14 that *“...they have not been a decisive consideration in reaching my decision.”* Turning to the SRF document and the fact that the Application Site falls within the Aytoun Street Campus site Mrs. Jones fails to see how this document can carry any significant weight in the decision-making process now given that it has been drawn up in the context of the HS2 proposals which have now been shelved.

7. Conclusions

7.1 The application proposal would involve the replacement of three existing backlit advertisements which enjoy deemed consent. Close by is a Grade II* listed building, a Grade II listed boundary wall and the setting of the Whitworth Street Conservation Area. The Heritage Assessment which supports this application has confirmed that the overall impact of the proposed advertisement would be slight and positive with a broadly positive effect on the setting of the Grade II* listed building. This is a material consideration in the determination of this application.

- 7.2 The application proposal would involve the replacement of an existing 96 sheet internally illuminated advertisement with a digital display of the same dimensions, height above ground level, siting, and orientation. The Dawson Street appeal referred to (Appendix E) involved very similar circumstances to this and the appointed inspector took the view that the difference between the existing and proposed advertisements was not material. Furthermore, the fact that the existing advertisement benefitted from deemed consent was also identified by the Inspector as a material factor in the decision-making process. There appears to be no reason why the same approach shouldn't be adopted with this application.
- 7.3 The 2022 application/ appeal which was unsuccessful and related to the Application Site involved a materially larger digital screen than that now proposed, and the proposal was not supported by any comprehensive heritage impact assessment specifically relating to the proposal as is now the case. There would therefore appear to be no reasonable planning justification for the same decision to be attributed to the application proposal now before the council.
- 7.4 There are no highway safety issues associated with the proposed advertisement.
- 7.5 It is considered that there are no good planning grounds to resist the proposal and advertisement consent should therefore be forthcoming.

APPEAL DECISION NOTICE

Appeal Ref: APP/B4215/Z/22/3294291

Appeal Decision

Site visit made on 7 October 2022

by J M Tweddle BSc(Hons) MSc(Dist) MRTPI

an Inspector appointed by the Secretary of State Decision date:

29 November 2022

**Appeal Ref: APP/B4215/Z/22/3294291 ECP Car
Park, Aytoun Street, Manchester**

- The appeal is made under Regulation 17 of the Town and Country Planning (Control of Advertisements) (England) Regulations 2007 against a refusal to grant express consent.
- The appeal is made by Mr Stephen Smith of City Outdoor Media Ltd against the decision of Manchester City Council.
- The application Ref 132240/AOH/2021, dated 16 November 2021, was refused by notice dated 14 January 2022.
- The advertisement proposed is 1 no. digital display.

Decision

1. The appeal is dismissed.

Preliminary Matters

2. The description of the proposal varies throughout the appeal documentation.
Therefore, the description of the proposed advertisement set out in the heading above is taken from the original application form. The appellant's submission suggests that the proposal includes alterations to the existing boundary fencing and opportunities for feature paving/public artwork. However, as these works could involve independent acts of development, these elements are beyond the scope of the advertisement consent regime.
3. The Local Planning Authority (LPA) has drawn my attention to the development plan policies it considers to be relevant to this appeal, and I have taken them into account as a material consideration. Nevertheless, powers under the Regulations¹ to control advertisements may be exercised only in the interests of amenity and public safety, taking account of any material factors. In my determination of this appeal the LPA's policies have not therefore, by themselves, been decisive.
4. The LPA's reason for refusal includes reference to the heritage chapter of the National Planning Policy Framework (the Framework). However, the policies in that chapter apply only to the heritage related consent regimes as set out by the Planning (Listed Buildings and Conservation Areas) Act 1990, and therefore are of no relevance to the appeal proposal.

Main Issue

5. The main issue is the effect of the proposed digital advertisement on the visual amenity of the surrounding area, with particular regard to the setting of the City Police Courts, a Grade II* listed building.

Reasons

6. The appeal site is essentially a narrow strip of land along the eastern boundary of a private car park on Aytoun Street, a busy road that forms a main route through

¹ The Town and Country Planning (Control of Advertisements) (England) Regulations 2007

Manchester City centre. The surrounding area is characterised by a mix of modern contemporary high-rise buildings, reflecting recent efforts to regenerate this part of the city, interspersed by a variety of historic buildings.

7. The site's immediate context is dominated by the Grade II* listed City Police Courts, which sits to the northwest of the appeal site. Dating from circa 1868, the building is formed of several tall gables, a Gothic tower and a tall ornate chimney stack. Its exceptional design quality and architectural significance is evident in its highly decorative elevations which utilise redbrick and sandstone dressings executed in an Italian Gothic style. Its historic and architectural significance can be appreciated in public views from the surrounding streets, including in views from Aytoun Street over the appeal site. Therefore, owing to its proximity and positioning in relation to the listed building, the appeal site forms an integral part of the setting of the listed building.
8. The proposal seeks advertisement consent for a digital display measuring 18.6 metres by 4.65 metres by 0.265 metres, facing east over Aytoun Street. The proposed digital display would be internally illuminated with a maximum illumination level of 600cd/m², and would sit 1.3 metres from ground level to the base of the advertisement. It would display static digital images on a 10 second sequential rotation. The display would be set back from the pavement and replace one 96 sheet and two 48 sheet backlit advertisement hoardings along with two car park signs which are currently positioned along the eastern boundary of the car park.
9. Travelling north along Aytoun Street, there are good views of the side elevation of the City Police Courts and its distinctive architectural composition. However, owing to their size and positioning, the existing advertisements within the appeal site already dominate the foreground, harmfully interrupting public views of the listed building. Therefore, I consider that the scale and positioning of the existing advertisements have a detrimental effect on the visual amenity of the area, particularly in relation to the setting of the Grade II* listed City Police Courts. Far from setting a desirable precedent for the appeal proposal, these pre-existing advertisements carry very limited weight in support of the appeal.
10. The removal of the existing advertisements would improve views of the listed building, thereby enabling a greater appreciation of the designated heritage asset. The proposal would also result in a net reduction in the total area of advertising on display at the site. Furthermore, open views of the listed building would remain possible from within the car park. Nevertheless, as a result of its size, positioning and method of illumination, and in the absence of other digital advertisement units of similar scale or appearance, the proposed digital display would result in a highly prominent and visually obtrusive feature.
11. Its digital LED method of illumination, while below recommended standards for brightness and not comprising moving or flashing images, would provide much clearer and vivid visuals compared to the existing static displays. These factors would cause the proposed advertisement to be much more apparent and dominant in the street scene. This impact would be compounded by the intermittent changing of the illuminated display that would significantly draw the eye, further accentuating its visual presence and harmful effect on the amenity of the area. Accordingly, the proposed digital display would appear overly prominent and visually obtrusive in public views of the listed building on the approach along Aytoun Street. This would have a significant adverse visual effect on the setting of the listed building.

12. The appellant is of the view that the setting of the listed building is already compromised to a degree by the introduction of high-rise modern development and the loss of other historic buildings. However, this does not justify further harm to the setting of the listed building.
13. The appellant has indicated that they would accept a condition to provide a hard landscaping scheme to improve the area around the proposed advertisement, including a public art installation. Nevertheless, as referred to in my preliminary matters, these works could amount to development and therefore would go beyond the act of simply displaying an advertisement or facilitating the display of an advertisement. In any case, I am not convinced that such improvements would outweigh the harm I have identified.
14. I acknowledge that the LPA has raised no issues in relation to public safety. Whilst I have no reason to depart from this view, this is a neutral consideration that does not add weight in favour of the appeal. Advertisement consent was granted in 2014² for a similar advertisement, but I understand that this was never implemented, and I do not have the full details of that scheme before me. I am also referred to the approval of a LED digital display at Rochdale Road³ and an appeal decision for a LED display at Corporation Street⁴. However, these cases are of some age and the spatial context in those cases differs considerably from the case before me. Therefore, I have reached my own conclusion on the appeal proposal on the basis of the evidence before me.
15. The appellant relies heavily on extracts from a heritage statement⁵ prepared in 2016 and submitted as part of a planning application⁶ to support the development of a neighbouring site. However, that assessment was made to support a proposal for 478 residential units and commercial space. Therefore, given its age and purpose, it is of little relevance to the appeal before me.
16. Bringing all of these points together, due to its size, positioning and method of illumination, I conclude that the proposed digital advertisement would result in significant harm to the visual amenity of the surrounding area, with particular regard to the setting of the City Police Courts, a Grade II* listed building.
17. Whilst not decisive, the proposal would also be contrary to policies EN1, CC9, EN3, DM1 and SP1 of Manchester's local Development Framework Core Strategy Development Plan Document (2012) and saved policies DC15.1, DC15.2 and DC19.1 of the Unitary Development Plan for the City of Manchester (1995), in so far as these policies collectively seek to protect the amenity of the surrounding area, including the historic environment.

Conclusion

18. I have found the proposal to be harmful to the visual amenity of the surrounding area. For this reason, and having regard to all other matters raised, the appeal is dismissed.

Community Building, Kent – Stormdry AG Coat Protects Public Art from Graffiti

Background

This outdoor pool/lido area in Gillingham, Kent is an important and much-valued part of the local community. One area was used quite heavily for parking, loading/unloading and boat launching. The concrete and blockwork structure alongside this area was starting to look very tired and unappealing.

The council wanted to rejuvenate this area and bring back its visual appeal for the community. They asked Creatabot, a local organisation known for promoting creative community art projects, to redecorate the wall of the structure.

A group of local artists was chosen to redecorate the walls of the structure with an aquatic-themed mural. The mural would make use of the natural colour of the cement rendered portions of the wall to look like the sea bed and the rest would be painted.

The Problem

Creatabot were quick to start work on creating their mural. On previous similar jobs, this kind of artwork had quickly been damaged with graffiti. It was decided that an anti-graffiti coating was required in order to allow the project to go ahead.

A popular anti-graffiti solution was tested but it did not allow for jet-wash cleaning. This meant that cleaning had to be carried out by manually scrubbing the wall using water and detergent. Something that was deemed unacceptable by the council's maintenance contractor due to their time and equipment constraints.

Creatabot needed to find a solution that would not significantly alter the artwork, would be able to be cleaned using a simple jet-washer and would be hard-wearing enough to not require replacement or maintenance for a long time. We were contacted and asked to find an appropriate solution.

The Solution

Stormdry AG-Coat anti-graffiti protection coating was chosen as the ideal solution. It was chosen because it is a clear and permanent silicone-based coating which repels graffiti by forming a tough hydrophobic film on the substrate surface. Once cured, this coating stops paints and adhesives from being able to properly adhere to the surface and enables easy cleaning.

When graffiti is sprayed on the wall it can be easily washed off using a standard pressure washer with cold water and no detergents to remove the graffiti. The hard-wearing Stormdry AG-Coat is able to withstand up to 15 pressure washing cycles before needing a top-up application.

Once the Stormdry AG-Coat was specified, the concrete wall was scrubbed clean with wire brushes to remove old paint and debris. A masonry paint was applied as a backing coat, with various different emulsion paints used to paint the mural over the top. Stormdry AG-Coat was then applied in a single coat over the mural. It was applied by roller to achieve a smooth finish.

Creatabot was happy with the application and aesthetics of Stormdry AG-Coat. It will protect the mural underneath from future graffiti and any graffiti can be quickly removed with a pressure washer.

Interview with Natasha Steer – founder of Creatabot

What building was the mural painted on and why was it painted?

“The wall is on the exterior wall of an outdoor pool/river lido in a local park. This wall, in particular, is right next to a slipway that is regularly used by the local community to mount small boats and jet skis into the River Medway. It was looking very tired and unappealing and, as it is in such a busy area, the council asked me to improve it!

Why did you need to consider using an anti-graffiti coating?

“My friend and fellow artist Wendy Daws had created artwork on a great deal of the other exterior pool walls. Unfortunately, some of this had been quickly damaged with graffiti and the only way to remove it was to scrub it off physically with warm water due to the type of varnish that had been used. This had meant that Wendy had to keep returning to do this herself!

What factors influenced your decision to overcoat the mural with Stormdry AG-Coat?

“I was asked to find a coating that could be jet-washed off. This was a requirement from Medway Council's maintenance contractor, who need to clean surfaces in this way. They are unable to physically scrub off graffiti by hand due to time limitations.

Was the area cleaned up before being painted? If so what did you do?

“The concrete wall had remains of paint on so we scrubbed this off with wire brushes as well as scraped it off with metal scrapers. It was then painted with masonry paint before we created the mural with emulsion paint over the top. Once the paint had dried, we overcoating the entire mural with Stormdry AG-Coat.

What factors influenced your decision to overcoat the mural with Stormdry AG-Coat?

“My friend and fellow artist Wendy Daws had created artwork on a great deal of the other exterior pool walls. Unfortunately, some of this had been quickly damaged with graffiti and the only way to remove it was to scrub it off physically with warm water due to the type of varnish that had been used. This had meant that Wendy had to keep returning to do this herself! I was asked to find a coating that could be jet-washed off. This was a requirement from Medway Council's maintenance contractor, who need to clean surfaces in this way. They are unable to physically scrub off graffiti by hand due to time limitations.

How did you apply the Stormdry AG-Coat?

“It was applied by roller, as the surface was smooth enough to do this with.

What features of Stormdry AG-Coat do you find most useful or noteworthy?

“Artists and local authorities are always worrying about public artwork being damaged and they really need to be able to just jet-wash any graffiti – which isn't possible with most varnishes without causing damage. I think most people trying to damage the work would be able to visibly see it is coated – which we believe acts as a deterrent in itself!

E

DECISION NOTICE
APP/B4215/H/14/2222948

Appeal Decision

Site visit made on 28 October 2014

by Victoria Lucas-Gosnold LLB MCD MRTPI

an Inspector appointed by the Secretary of State for Communities and Local Government

Decision date: 3 November 2014

Appeal Ref: APP/B4215/H/14/2222948

Dawson Street, Hulme, Manchester, M15 4LG

- The appeal is made under Regulation 17 of the Town and Country Planning (Control of Advertisements) (England) Regulations 2007 against a refusal to grant express consent.
 - The appeal is made by Vivid Outdoor Media Ltd against the decision of Manchester City Council.
 - The application Ref 105529/AOH/2014/C1, dated 23 April 2014, was refused by notice dated 20 June 2014.
 - The advertisement proposed is proposed upgrade of 1 x 48-sheet LED advertising display unit with 1 x 48-sheet LED Digital advertising display unit.
-

Decision

1. The appeal is allowed and consent is granted for the upgrade of 1 x 48-sheet LED advertising display unit with 1 x 48-sheet LED Digital advertising display unit as applied for. The consent is for ten years from the date of this decision and is subject to the five standard conditions set out in the Regulations and the following additional conditions:
 - 1) No individual advertisements displayed on the LED panel shall contain moving images, animation, videos or full motion images or any images that resemble road signs or traffic signs.
 - 2) No individual advertisements shall be displayed for a duration of less than 8 seconds.
 - 3) Controls shall be in place to ensure smooth uninterrupted transition of images displayed on the panel.

Main Issue

2. The main issue is the visual impact of the advertisement at the site and within the surrounding area, with particular regard to the Castlefield Conservation Area and the Grade II Listed Railway Viaduct.

Reasons

3. The appeal site comprises a large brick built, supporting column between two wide arches which form part of the Grade II Listed Railway Viaduct. The Viaduct is a substantial structure and visually dominates both the immediate area and more distant views. The appeal site is also within the Castlefield Conservation Area (CA).

4. The site is located immediately next to Dawson Street (the A57) which serves as a main arterial transport route into and out of Manchester city centre. The A57 is a busy, three lane highway which passes under the Viaduct and there are several highway features including directional signs, overhead gantrys and tall street light columns close to the site. Buildings in the area comprise both historic and more recent development but are generally of a large scale, such as the modern apartment blocks on the opposite side of the street and the red brick mill on the other side of the Viaduct from the appeal site. There are some trees located close to the appeal site along Potato Wharf but these are set back from the highway behind a grassed area.
5. The character of the area is therefore defined by that of a busy commercial area, located close to the city centre. This is also true of the Grade II Listed Viaduct in that whilst its large scale visually dominates the area, its setting is also defined by the built fabric of a vibrant, commercial city which continues to evolve around it over time and comprises both historic and modern development.
6. There is an existing poster board advert displayed at the appeal site which I understand has deemed consent. It is located flush with the large brick supporting column of the Viaduct. It is approximately 6 metres wide and 3 metres high and is internally lit. The advert sits relatively centrally between two of the Viaduct's arches. Whilst I accept that the width of the advert does obscure some limited views of the Viaduct's column, the height of the Viaduct is such that the advert is not seen as unduly out of scale when viewed against the substantial backdrop of the Viaduct's overall structure.
7. As the size, scale and location of the advert currently in situ at the appeal site represents the existing situation, I must have regard to it when assessing the appeal scheme before me in relation to the main issue which I have identified above.
8. The submitted plans show that the appeal proposal would be the same length and width as the existing advert. It would also be internally lit, which is also the case with the existing advert.
9. Given that the proposal would be positioned in the same location as the existing advert, the only view that it would partially obstruct would be that of the Viaduct's column and part of the adjacent arch. In this respect, it would be no more poorly placed than the existing advert which, as described above, is largely absorbed into the appearance of the Viaduct as a result of the substantial height and massive scale of that structure. The proposal would therefore preserve the setting of the Listed Viaduct in that there would be little appreciable difference when compared with the existing situation. For the same reasons, the proposal would also preserve the character or appearance of the CA.
10. Although the Council have referred to the proposed advert obstructing views of trees, modern high quality development and other Listed buildings in the area (including the Grade II Listed Worsley Mill and the Grade II* Listed St Georges Church), it is difficult to see how that would be so. This is because the trees are set back from the highway and are not placed in front of the appeal site and, as previously stated, the proposed advert would be situated flush against the brick elevation of the Viaduct. Therefore, the extent to which any views of other buildings in the area are obstructed is as a result of the Viaduct itself rather than the proposed advert. Whilst there may be low level industrial buildings in the area,

they do not form part of the close context of the appeal site, which is defined by the massive scale of the Viaduct.

11. Taking into account the existing advert at the site, I consider that the proposal would not lead to an increase in visual clutter as it would not be materially different to the existing situation. This is also because there is already a degree of visual clutter in the area, such as highway signs, that one would expect to find within a busy city environment.
12. I accept that at the time of the original application, the appellant may not have considered the impact of the proposal on the relevant heritage assets, in line with requirements set out in the National Planning Policy Framework (the 'Framework'). However, paragraph 128 of the Framework also states, among other things, that the level of detail should be proportionate to the assets' importance and no more than is sufficient to understand the potential impact of the proposal on their significance. Given that the proposal sought to replace an existing advert with one of similar proportions in the same location, it would not have been reasonable to expect an extensive heritage appraisal in this regard.
13. Drawing matters together, the proposed advertisement would be seen within the context of the busy commercial environment in which it would be situated. Additionally, taking account of the existing advert, it would not be materially different to the existing situation. For these reasons, I conclude that the advert proposed would not be unduly harmful to the visual amenity of the area, with particular regard to the CA and the Grade II Listed Railway Viaduct.
14. The Regulations require that decisions are made only in the interests of amenity and public safety. Consequently, although I have taken into account the policies and guidance which the Council have referred to, including policies EN1, CC1, C1, CC9, EN3, DM1, SP1 of the Council's Core Strategy (Adopted July 2012); the 'Guide to Development in Manchester' Supplementary Planning Document (paragraphs 2.6 and 11.45; saved policies E3.3, DC15.1, DC15.2, and DC18.1, DC19 of the Council's Unitary Development Plan (Adopted July 1995); and also sections 7 and 12 of the Framework; they have not been a decisive consideration in reaching my decision.

Conditions and Conclusion

15. For the reasons given above, I conclude that the appeal should be allowed.
16. I shall impose the five standard conditions set out in the Regulations. Additionally, I have specified in the formal decision that the period of consent is for ten years as that is the period specified on the original application. The highway authority have requested that conditions are imposed to control images displayed in that they should not resemble road or traffic signs, that no individual advertisement should be displayed for less than 8 seconds and that controls are in place to ensure a smooth uninterrupted transition of images. As the advert would be sited next to a busy three lane arterial transport route, I shall therefore impose the conditions requested in the interests of highway safety.
