GENERAL INFORMATION

Application Site Boundary

Planting Methodology

We have provided detailed plant specifications with regards to their size, specification, density and number. The planting concept is blocks of individual species within beds. The methodology for planting is to not specifically define the location of individual plants. The plants will be laid out according to the Conractor's wishes- with the following parameters to be followed. The intention of the plan is that the planting will have a naturalistic approach.

Mixed Beds

Individual species to be grouped in odd numbers (where possible) of 5, 7 & 9 etc. Distribute groups of species throughout the whole bed.

Plants are to be planted in groups no smaller than the density in which they are specified. i.e Plants with a minimum density of 4m2 are to be planted in groups of no less than 5 (noting parameter 2 - odd numbers)
