Executive Summary

Appointment	In November 2021 Curtins were instructed by Faithful & Gould (Manchester) to undertake a Phase 1 Preliminary Risk Assessment of an area of a site located off Postal Street, Manchester M1 1EE. The site is centred on NGR SJ 84727 98449 and covers an area of approximately 0.16 Ha. It is understood that the proposed site development is a 6-8 storey residential block with 85-100 units.
Current Site Status	The site is located within Manchester City Centre off Postal Street and is currently a hard standing car park to the southeast and a row of single of commercial units adjacent to Newton Street covering the remaining area of the site.
Site History	Earliest mapping (1848-1851) records the site with industrial buildings including a cotton mill and a plate manufactory. 1891 these buildings have been demolished and replaced with two rows of terraced houses. By 1969 the terraced houses within the eastern and southern sections of the site have been demolished with the houses in the northern and western demolished by 1985. Two large buildings have been constructed along the northwestern boundary adjacent to Newton Street with remain to present day with the south of the site adjacent to Dean Street remaining as car parking. Throughout the site's history, its surroundings are generally occupied by residential properties and industrial buildings with most being demolished and reconstructed or redeveloped with commercial buildings and car parking with limited contaminative potential.
Geology	BGS mapping indicates the site is underlain by Glacial Till superficial deposits and Chester Formation bedrock. The BGS records three boreholes within 50m of the site to depths of 5.00-6.50m bgl. Made Ground was noted to between 1.20-2.90m bgl and no bedrock encountered within these boreholes. The site is located in a low probability radon area where <1% of homes are estimated to be at or above the radon Action Level.
Hydrogeology	The site is underlain by a Principal Aquifer associated with the bedrock formation. The superficial deposits are designated as a Secondary Undifferentiated Aquifer. The site is not located within a Source Protection Zone (SPZ). There are no potable groundwater abstraction point located within 1km of the site.
Hydrology	The nearest surface water feature is the Rochdale Canal 125m southeast of the site. There are no surface water abstractions within 900m. There are no discharge consents within 400m of the site. Two pollution incidents have been recorded within 250m of the site. Both dated 1996 and noted as minor incidents located 226m south and 250m east.
Unexploded Ordnance Risk	The risk from UXO associated with WWII bombing to construction workers is considered to be Low.
Initial Ground Contamination Assessment	The risk from Made Ground posed to the site's end-users and groundwater is considered to be Moderate due to the likely contamination in the Made Ground. The risk posed to surface water is considered to be Low due to the distance to the nearest surface water feature. The risk posed to site end-users from ground generating gases arising from organic / putrescible soils and infilled land (water) near the site is considered to be Moderate.
Recommendations	The following recommendations are made with regards to further works at the site: 1. Undertake an intrusive ground investigation; 2. Undertake a GQRA as part of the ground investigation; and 3. Undertake Ground Gas Monitoring over a period of two-three months for methane, carbon dioxide, oxygen, hydrogen sulphide, gas flow in l/hr, weather conditions and barometric pressure (with confirmation if falling, steady or rising). It is further recommended that this work is completed in advance of any development works taking place.

1.0 Introduction

1.1 Project Background

In November 2021 Curtins were instructed by Faithful & Gould (Manchester) to undertake a Phase 1 Preliminary Risk Assessment of an area of land located south of Postal Street, Manchester, M1 1EE.

The location and extent of the site is shown in *Figure 2.1* on the following page. It is understood that the proposed site development is a 6-8 storey residential block with 85-100 units. A proposed site plan is included in *Appendix A*.

1.2 Scope of Services

The Phase 1 PRA is intended to provide an overview of the geo-environmental and geotechnical setting of the site, prior to the proposed development of the site.

Proposed development drawings for the site are included in *Appendix A*.

Through this overview, the Phase 1 PRA aims to develop both a working conceptual and ground model for the site, as well as present an initial assessment of any risks that could be presented to the development including its intended end users and the wider environment.

Specifically, the Phase 1 PRA provides an initial assessment of the site regarding:

- a) Potential on and offsite contamination from historical and/or current uses, including potential ground gas generating sources;
- b) The potential impact on the wider environment by historical and or current use of the site of interest;
- c) The potential impact from surrounding land uses and other environmental factors;
- d) Potential problems associated with geological features such as faulting, mineral extraction, mining and land instability; and
- e) The location of apparent sub-surface structures that may affect the proposed redevelopment.

Consideration of detailed flood risk, ecology and archaeological issues are outside of the scope of this report.

2.0 Current Site and Surrounding Area Details

2.1 Site Location and Current Details

Site use, location and description are shown below in *Table 2.1* and *Figure 2.1*.

Table 2.1 – Site Details

Site Address	Postal Street, Manchester, M1 1EE
NGR	SJ 84727 98449
Area of Site	Approximately 0.16 Ha.
Current Site Use and Description	The site is located within Manchester City Centre off Postal Street and is currently a hard standing car park to the southeast and a row of single of commercial units adjacent to Newton Street covering the remaining area of the site. The topography of the site is level.

Figure 2.1 – Site Location Plan (site boundary shown in pink and 250m buffer in purple).

The following information was established through undertaking an environmental database search (Envirocheck report (Ref. 1) included in *Appendix B*).

Table 2.2 – Surrounding Land Uses

Surrounding Area	NW	Newton Street with commercial buildings beyond.
	NE	Postal Street with commercial buildings and car parking beyond.
	SW	Faraday Street and commercial buildings.
	SE	Dean Street with car parking and commercial buildings beyond.

3.0 Site History

A review of the available historical mapping and other information for the site, as presented within the Envirocheck Report (Ref. 1), has been undertaken and is presented in *Table 3.0* below.

Table 3.0 – Previous Site and Surrounding Area Uses and Potential Sources of Contamination. *Bold text refers to on-site activity.*

Date	Description	Potential Sources of Contamination
1848 – 1891	The earliest available mapping (1848-1851) shows the site as developed by industrial buildings noted to be a cotton mill and 'The Plate Manufactory'. Part of Newton Street Mill and Timber Yard encroach the north of the site. The surrounding area is mostly industrial land use with residential roads with terraced housing to the north, east and south of the site. Newton Street Mills is located 20m north, iron works and warehouses are located within 50m south, several other metal foundries and machine factories are located within 200m south of the site. Wharfs surrounding basins of the Rochdale Canal are present within 200m southeast of the site.	• Potential for uncontrolled deposition of Made Ground during on-site and surrounding construction. • Potential contamination from the industrial works on site, cotton mill and Plate Manufactory. • Potential contamination from industrial works within 100m surrounding the site.
1891 - 1933	By 1891, the site has been re-developed following demolition of the industrial buildings with two rows of terraced residential properties. Minimal change is recorded in the surrounding area of the site within 250m, there is noted re-developed to residential land use to the south, west and north. By 1922, New Street Mills 20m north of the site has been re-developed with a post office. Industrial land use of wharfs around the basins of the Rochdale Canal are still present.	• Potential for uncontrolled deposition of Made Ground during on-site and surrounding demolition and construction.
1933 – 1956	The site remains as terraced houses, with some small buildings being developed on site by the 1950s. By 1948, a furniture warehouse, printing works, paintworks and machine tool works are noted within 60m south southeast of the site. The canal basin that was located 100m southeast of the site has been infilled and Hills Service Garage is recorded to occupy this site. The surrounding area to the south, north and west is re-developed from industrial land use with hotels, pubs, and local services such as police station and school. Industrial land use is still recorded by Rochdale Canal 200m south and east of the site.	• Potential for uncontrolled deposition of Made Ground during surrounding construction and demolition works. • Potential for ground gas generation from infilled basin within 100m of the site. • Potential contamination from industrial land use within 60m of the site.
1956 – 1969	No re-development on the site. Mapping of the northern surroundings of the site show from 1965, the area within 100m north of the site has been subject to demolition and one small building is noted in this area but is marked otherwise as unoccupied land. Industrial land use as unspecified works is noted over 200m northeast of the site and occasional works noted 150m northwest of the site, surrounded mainly by residential and commercial properties.	• Potential for uncontrolled deposition of Made Ground during on-site and surrounding construction and demolition works.
1969 – 1985	By 1969, the site is subject to demolition of residential properties on the eastern and southern boundaries, properties remain on the northern and western boundaries.	• Potential for uncontrolled deposition of Made Ground associated with the redevelopment of the site.

Date	Description	Potential Sources of Contamination
	The land within 50m north of the site, north of Postal Street is marked by 1971 as Government Offices. No redevelopment is noted in the area immediately surrounding the site, except for a garage noted approximately 40m northeast of the site. In the wider vicinity, by 1969 one of the basins of Rochdale Canal, approximately 120m southeast of the site has been cut off from the canal, and by 1971 is noted to be occupied by a builders yard. By 1971, Dale Street Wharf approximately 200m south of the site is noted as re-developed from canal warehouses and wharf buildings to a large carpark area north of Dale Street Basin.	• Potential contamination from oils/hydrocarbons relating to the garage 40m from the site and from hardstanding car parking on site.
1990 – 1996	By 1985, all buildings on the southern and eastern boundary are demolished. Two large buildings (Arabesque House) are present on the western boundary. By 1985, the post office within 25m north of the site is re-developed as a sorting office occupying land to north of the original post office. The Rochdale Canal approximately 150m east of the site is marked disused. The area in the immediate vicinity of the site otherwise remains unchanged to 1996.	• Potential for uncontrolled deposition of Made Ground associated with the demolition on the site and construction off site. • Potential contamination from oils/hydrocarbons relating to the garage 40m from the site and from hardstanding car parking on site.
1996 - Present	Buildings on the site is noted as a large building with smaller units along the western boundary. The eastern boundary of the site remains unchanged with no buildings and covered by hardstanding used for car parking similar to present day. Up to present day, demolition has taken place of works to the southeast of the site within 250m to be replaced with car parking areas and large buildings and also re-development of site along the canal for office buildings and commercial buildings.	• Potential for uncontrolled deposition of Made Ground associated with the construction on the site. • Potential contamination from oils/hydrocarbons relating to the garage 40m from the site and from hardstanding car parking on site.

Potential sources of onsite contamination are further discussed in *Section 6.0*.

4.0 Geology, Hydrogeology and Hydrology

4.1 Geology and Hydrogeology

A study of the Envirocheck (Ref. 1) Report and the British Geological Survey (BGS) 1:50,000 mapping records (Bedrock and Superficial Editions) for Manchester (Sheet 085) (Ref. 2) indicates the following geological and hydrogeological succession underlying the site:

Table 4.1 – Geological/Hydrogeological Succession

Geology	Associated Hydrogeological Classification
BGS Records do not indicate the presence of Made Ground on site, however the site's historical use as industrial buildings and terraced properties suggests that there is potential for Made Ground deposits.	N/A
Glacial Till Deposits, Devensian ¹	Secondary Undifferentiated Aquifer ²
Chester Formation ³	Principal Aquifer ⁴

Notes:

1. A heterogeneous mixture of clay, sand, gravel, and boulders varying widely in size and shape.
2. Aquifers where it is not possible to apply either a Secondary A or B definition because of the variable characteristics of the rock type.
3. The formation comprises conglomerates and reddish brown, cross-bedded, pebbly sandstones with subordinate beds of red-brown mudstone. The conglomerates have a reddish-brown sandy matrix and consist mainly of pebbles of brown or purple quartzite. Gravel is composed of well-rounded pebbles, cobbles and boulders in a coarse to fine granulestone and silty sandstone matrix.
4. These are layers of rock or drift deposits that have high intergranular and/or fracture permeability – meaning they usually provide a high level of water storage. They may support water supply and/or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifers.

There are 3 BGS recorded boreholes located within 50m of the site boundary (Ref. 3), these are detailed and presented within *Table 4.2* below:

Table 4.2 – BGS Borehole Records

Record Reference	Location (NGR)	Details (bottom to top of strata/details/thickness of strata)	
SJ89NW377 9	19m Northwest (384700,398460)	0.00m to 0.10m bgl 0.10m to 0.45m bgl 0.45m to 0.70m bgl 0.70m to 2.90m bgl 2.90m to 5.00m bgl <i>5.00m bgl</i>	Bituminous Surfacing (0.10m) Reinforced Concrete (0.35m) Made Ground of clay, ashes and brick (0.25m) Made Ground of soft brown clay with stone and brick inclusions (2.20m) Stiff/very stiff brown silty and sandy CLAY with grey fissures, stone and coal inclusions (2.10m) <i>Borehole terminated</i>
SJ89NW398 6	28m East (384774,398429)	0.00m to 0.05m bgl 0.05m to 0.25m bgl 0.25m to 0.35m bgl 0.35m to 1.70m bgl	Bituminous Surfacing (0.05m) Setts (0.20m) Made Ground of ashes, cinders and stones (0.10m) Made Ground of clayey ashes, cinders and brick pieces (0.35m)

Record Reference	Location (NGR)	Details (bottom to top of strata/details/thickness of strata)	
		1.70m to 5.30m bgl	Stiff brown silty and sandy CLAY with grey fissures, stone and coal inclusions with very stiff zones (3.60m)
		5.30m	Borehole terminated
SJ89NW398 5	44m Southwest (384692,398379)	0.00m to 0.05m bgl	Bituminous Surfacing (0.05m)
		0.05m to 0.25m bgl	Setts (0.20m)
		0.25m to 0.55m bgl	Ashes (0.30m)
		0.55m to 1.20m bgl	Made Ground of stiff brown clay, ashes and brick pieces (0.35m)
		1.20m to 4.50m bgl	Very stiff brown silty and sandy CLAY with grey fissures, stone and coal inclusions (3.30m)
		4.50m to 6.50m bgl	Firm/stiff silty and sandy laminated CLAY with grey fissures, stone and coal inclusions (2.00m)
		6.50m	Borehole terminated

There are no BGS recorded faults on site, the nearest fault is located 145m southeast of the site aligned northwest to southeast.

The site is not situated within a Source Protection Zone (SPZ). There are no groundwater abstraction point within 700m of the site.

4.1.1 Mining

A review of the Coal Authority interactive mapping (Ref. 4) for the area indicates that the site is located within a coal mining reporting area however is not within a high-risk area and the nearest coal mining features (shafts, outcrops, etc) are located over 1km southeast. Therefore, the risk to development from historic coal mining is considered to be **Low** and has not been considered further.

There are no recorded BGS mineral sites within 1km of the site.

4.1.2 Other Ground Stability Issues

The Envirocheck Report (Ref. 1) confirms that there is a no hazard to very low risk from the following ground stability hazards on the site; collapsible ground, compressible ground, ground dissolution, landslide ground, running sands and shrinking or swelling clay.

4.1.3 Ground Gas

There are no recorded landfill sites within 700m of the site.

Historical maps show the presence of a wharf and basin approximately 49m southeast of the site until 1923.

The Envirocheck Report (Ref. 1) identifies one potentially infilled land (water) within 50m of the site which was infilled with unknown material in 1923 located 49m southeast which is assumed to be the historic basin and wharf.

The Envirocheck report (Ref. 1) and UK Maps of Radon (Ref. 5) confirm the site is situated in a lower probability radon area where <1% of homes are above the radon action level. On this basis radon protection measures are not considered necessary in the construction of new dwellings or extensions.

Where the new development incorporates a basement the advice of a specialist Radon assessor must be obtained.

4.2 Hydrology

The nearest surface water feature is the Rochdale Canal, located approximately 125m southeast. River Quality is noted as Grade B.

There are two pollution incidents to controlled waters recorded within 250m of the site. Recorded 226m south and 250m east both dated 1996 and noted as Category 3 – minor incident.

There are no surface water abstractions within 900m and no active discharge consents recorded within 400m of the site.

5.0 Unexploded Ordnance Risk Assessment

Military activities including those conducted as part of both the First and Second World Wars have resulted in a legacy of unexploded ordnance (UXO) being present within the shallow soils of the UK.

UXO result from various sources including both allied (military training) and German (bombing raids) with a guide figure of approximately 10% of all munitions failing to function as designed.

The likelihood of UXO being encountered on a development site is influenced by several factors including; the proximity to strategic targets, the nature of the development works being undertaken and evidence of local damage in the post-war periods amongst others. To determine the likelihood of UXO being present on a site, a step-wise risk assessment process is followed. This process is outlined within CIRIA C681 Unexploded Ordnance: A Guide for the Construction Industry (Ref. 6) with the following commentary considered to represent a Preliminary Risk Assessment intended to guide if and where there is a requirement for a Detailed Risk Assessment.

5.1 Preliminary UXO Assessment

Risk mapping (Ref. 7) for UXO's has placed the site in a **Moderate** risk area. Moderate-risk regions are those that show a bomb density of between 11 and 50 bombs per 1000 acres and that may contain potential WWII targets. Action to mitigate the risk is considered essential, albeit more likely that a reduced scope of work is required compared with that needed for high-risk regions.

A review of the available historic mapping does not show any evidence of bomb damage to the site. The risk mapping indicates that there are Luftwaffe targets approximately 700m north of the site.

Analysis of historical bomb mapping from the University of Manchester (*Figure 5.1*) shows that less than 74m west from the site a fire bomb (red circle) had hit and damaged a building in June 1941 (Ref. 8).

Figure 6.1: Site boundary shown in red.

Considering the above, and lack of evidence of damage onsite, the risk of encountering potential UXO as part of future intrusive works is considered **Moderate to Low**. Therefore a Detailed UXO Risk Assessment Report is not required.

If unexploded ordnance is discovered during any works, stop immediately, prevent access to the area, and inform the police. If the site boundary or location changes then the UXO risk should be reassessed.

6.0 Conceptual Site Model & Qualitative Risk Assessment

The conceptual site model (CSM) and Qualitative Risk Assessment (QRA) are presented in the table within this section.

The CSM details the source-pathway-receptor linkages or potential pollutant linkages (PPL) that have been identified for the site. The QRA details the associated level of risk relating to these potential pollutant linkages.

The CSM and QRA concern risk to human health and water environment with additional, more specific risk assessment protocols contained within the main body of this reporting, as detailed in *Section 6.1* below.

The QRA follows the framework outlined within CIRIA C552 (Ref. 9) which is summarised within *Appendix C*.

The 'risk rating' within the QRA refers to the risk that the source, pathway, receptor linkage or PPL is complete. Unless specifically stated it does not necessarily refer to an immediate risk and is intended to be used as a tool to assess the necessity for further assessment/investigation.

6.1 Additional Risk Assessments

The following risk assessments, listed below, are not included within the main CSM and QRA but nonetheless can be of critical importance to the onward development of the site:

- The risk presented by Mining is discussed and assessed in *Section 4.1.1*.
- The risk presented by Radon is discussed and assessed in *Section 4.1.3*.
- The risk presented by Unexploded Ordnance is discussed and assessed in *Section 5.0*.

Under current health and safety legislation, employers are required to carry out their own appropriate risk assessments and mitigation to protect themselves and their employees, other human receptors and the environment from potential contamination. Such risks must be adequately mitigated by law, specifically the Construction Design Management (CDM) Regulations, 2015 (Ref. 10) which require that potential risks to human health and the environment from construction activities are appropriately identified and all necessary steps taken to eliminate / manage that risk. It has been assumed that any future construction works on site will be undertaken in compliance with these requirements.

Qualitative Risk Assessment
Generic Quantitative Risk Assessment
Detailed Quantitative Risk Assessment or; Remedial Action

- The table below represents the first stage in the land quality risk assessment process: The Qualitative Risk Assessment.
- For a development site to be deemed 'suitable for use', the level of risk needs to be brought down to acceptable levels, i.e. low to very low risk. The purpose of each stage of risk assessment is ultimately to establish, if there is a requirement for additional levels of assessment to be made to have sufficient confidence to support a risk characterisation or management decision, e.g. remedial action.
- In the absence of specific site data, a Generic Quantitative Risk Assessment is invariably recommended.

Conceptual Site Model			Qualitative Risk Assessment			Recommended Actions
Source	Pathway(s)	Receptor(s)	Consequence	Likelihood of Occurrence	Risk Rating	
Significant sources of on-site contamination: • Made Ground of unknown composition from uncontrolled deposition of materials onsite during the construction and demolition of industrial buildings and terraced houses on site. • Potential contamination from oils/hydrocarbons relating to the hardstanding car parking on site. Significant sources of off-site contamination: • Uncontrolled deposition of Made Ground during the construction of roads and structures and demolition near and adjacent to the site's boundaries. • Potential contamination from industrial works within 100m surrounding the site. • Potential contamination from oils/hydrocarbons relating to the garage 40m from the site and from hardstanding car parking on site.	Direct contact, ingestion, inhalation (dust and vapours)	End-user of site (High rise residential) & Construction Workers	Medium Chronic health risk	Likely Based on the site's development history and historical industrial use, the likelihood of encountering significant contamination within the Made Ground is considered to be likely. There is potential for localised contamination related to the demolition of ACM-containing structures considering demolition of the terraced properties on site. Likelihood of construction workers coming into contact with contamination on site can be reduced by appropriate PPE.	Moderate	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.
	Vertical migration through the superficial deposits (soils) May occur due to existing service corridors and physical processes including; capillary action and downwards into the natural deposits through infiltration.	Controlled Waters (Groundwater) Principal Aquifer (Bedrock), overlain by Glacial Till Deposits (Secondary Undifferentiated Aquifer). There are no potable groundwater abstraction points within 1km. The site is not located within an Source Protection Zone.	Medium Pollution of sensitive water resources	Low Likelihood While there is the potential for localised contamination to migrate vertically through the superficial deposits to the bedrock principal aquifer, there is a low likelihood of significant contamination being present in the Made Ground due to lack of historical industrial land use.	Moderate / Low	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.
	Horizontal migration over and through the superficial deposits (soils)	Controlled Waters (Surface Water) Nearest surface water feature is the Rochdale canal located over 125m southeast. No surface water abstraction points within 900m.	Medium Pollution of sensitive water resources	Unlikely Considering the distance from the site to the nearest surface water receptor and the expected low levels of contamination within the Made Ground, this pathway is considered unlikely.	Low	No further action required
Significant sources of ground gas: • Historic basin and wharf located 49m to the southern boundary of the site infilled with unknown material that has the potential to contain organic / putrescible material. • Localised organically rich deposits present within the natural soils.	Vertical and horizontal migration through existing service corridors and the underlying superficial deposits	End-user of site (High rise residential)	Medium Human health risk	Likely There is potential for gas generation from the infilled river along the site boundary and from any localised organically rich deposits present in the Made Ground.	Moderate	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.

7.0 Conclusion and Recommendations

The qualitative risk assessment (QRA) determined a varied level of level of risk associated with the proposed development.

The QRA concluded by recommending that generic quantitative risk assessments (GQRA) were conducted to confirm the assessment of risk ascribed to each of the respective potential pollutant linkages (PPLs). It is recommended that the GQRA is conducted as part of a ground investigation in support of the engineering design of the proposed development.

In summary, the following recommendations are made:

- Undertake an intrusive ground investigation;
- Undertake a GQRA as part of the ground investigation; and
- Undertake ground gas monitoring over a period of two-three months for potential hazardous gases; and

It is further recommended that the site investigation works are completed in advance of any development works taking place.

7.1 Contaminants of Concern

Potential contaminants of concern associated with the sources identified within the Conceptual Site Model in *Section 6.0* of this reporting include but are not limited to: broad range aliphatic and aromatic hydrocarbons present within any fuel oils; polycyclic aromatic hydrocarbons (PAHs); inorganic compounds including heavy metals; SVOCs, VOC's and asbestos present in discarded building materials.

Potential contaminants associated with the airborne dust/particulates include but are not limited to: polycyclic aromatic hydrocarbons and inorganic compounds including toxic metals that are also accounted for by potential onsite contaminants of concern.

7.2 Other Considerations

The requirement for additional surveys, e.g. arboricultural and ecological surveys, should be confirmed through advice from a suitably qualified and experienced professional.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Natural England Copyright Notice

Site of Special Scientific Interest, National Nature Reserve, Ramsar, Special Protection Area, Special Conservation Area, Marine Nature Reserve data (derived from Ordnance Survey 1:10000 raster) is provided by, and used with the permission of, Natural England who retain the copyright and Intellectual Property Rights for the data.

Scottish Natural Heritage Copyright

Contains SNH information licensed under the Open Government Licence v3.0.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England.

Natural Resources Wales Copyright Notice

Contains Natural Resources Wales information © Natural Resources Wales and Database Right. All rights Reserved. Contains Ordnance Survey Data. Ordnance Survey Licence number 100019741. Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Published 1909

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Manchester
Published 1975
Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Lancashire And Furness

Published 1922 - 1933

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Map Name(s) and Date(s)

104_06 1933 1:2,500	104_07 1922 1:2,500
104_10 1932 1:2,500	104_11 1932 1:2,500

Supply of Unpublished Survey Information

Published 1974

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Appendix C Qualitative Risk Assessment Rationale

The site-specific risk assessment, presented in this report, follows the principle of establishing whether there is a viable linkage between a contaminant source to a potential receptor, via an exposure pathway.

The risk assessment corresponds with the total site area and incorporates both descriptive (qualitative) and, where available, numerical (quantitative) lines of evidence.

Risk assessment is the process of collating known information on a hazard or set of hazards to estimate actual or potential risk to receptors. The receptor may be humans, a water resource, a sensitive local ecosystem or future construction materials. Receptors can be connected to the source by one or several exposure pathways such as direct contact for example. Risks are generally managed by isolating the receptor or intercepting the exposure pathway or by isolating or removing the hazard.

Without the three essential components of a source, pathway and receptor there can be no risk. Therefore, the presence of contaminant source on a site does not necessarily mean there is a risk.

The risk assessment considers the likelihood of an event taking place (accounting for the presence of the source and receptor and the viability of the exposure pathway) in conjunction with the severity of the potential consequence (accounting for the potential severity of the hazard and the sensitivity of the receptor).

In the risk assessment, the consequence of the hazard has been classified as severe or medium or mild or minor and the probability (likelihood) of the circumstances occurring classified as high likelihood or likely or low likelihood or unlikely.

The consequences and probabilities are subsequently cross-correlated to give a qualitative estimation of the risk using Department of the Environment risk classifications as detailed in the table below and as referenced in CIRIA C552.

		Consequence			
		Severe	Medium	Mild	Minor
Probability (Likelihood)	High Likelihood	Very High Risk	High Risk	Moderate Risk	Moderate/Low Risk
	Likely	High Risk	Moderate Risk	Moderate/Low Risk	Low Risk
	Low Likelihood	Moderate Risk	Moderate/Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate/Low Risk	Low Risk	Very Low Risk	Very Low Risk

In accordance with DoE guidance, the following categorisation of **consequence** has been developed.

Classification	Definition	Examples
Severe	Short-term (acute) risk to human health likely to result in "significant harm" as defined by the Environment Protection Act 1990, Part IIA. Short-term risk of pollution of sensitive water resource. Catastrophic damage to buildings/property. A short-term risk to an ecosystem or organisation forming part of such ecosystem.	High concentrations of cyanide on the surface of an informal recreation area. Major spillage of contaminants from site into controlled water. Explosion, causing building collapse (can also equate to a short-term human health risk if buildings are occupied).
Medium	Chronic damage to Human Health. Pollution of sensitive water resources. A significant change in an ecosystem or organism forming part of such ecosystem.	Concentration of a contaminant from site exceeds the generic or site-specific assessment criteria. Leaching of contaminants from a site to a Principal or Secondary A aquifer. Death of a species within a designated nature reserve. Lesser toxic and asphyxiate effects
Mild	Pollution of non-sensitive water resources. Significant damage to crops, buildings, structures and services. Damage to sensitive buildings/structures/services or the environment.	Pollution of non-classified groundwater (inc. Secondary B aquifers). Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability).
Minor	Harm, although not necessarily significant harm, which may result in a financial loss or expenditure to resolve. Non-permanent health effects to human health (easily prevented by means such as personal protective clothing, etc). Easily repairable effects of damage to buildings, structures and services.	The presence of contaminants at such concentrations that protective equipment is required during site works. The loss of plants in a landscaping scheme. Discoloration of concrete.

In accordance with DoE guidance, the following categorisation of **probability** has been developed.

Classification	Definition
High Likelihood	There is a pollution linkage and an event that either appears very likely in the short term and almost inevitable over the long term or there is evidence at the receptor of harm or pollution.
Likely	There is a pollution linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.
Low Likelihood	There is a pollution linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place and is less likely in the shorter term.
Unlikely	There is a pollution linkage, but circumstances are such that it is improbable that an event would occur even in the very long term.

In accordance with DoE guidance, the following categorisation of **risk** has been developed.

Classification	Definition
Very High Risk	There is a <i>high probability</i> that <i>severe harm</i> could arise to a designated receptor from an identified hazard at the site without appropriate further action.
High Risk	<i>Harm is likely to arise</i> to a designated receptor from an identified hazard at the site without appropriate further action.
Moderate Risk	<i>It is possible</i> that without appropriate further action <i>harm could arise</i> to a designated receptor. It is relatively <i>unlikely</i> that any such harm would be <i>severe</i> , and if any harm were to occur it is <i>more likely</i> that such harm would be <i>relatively mild</i> .
Low Risk	<i>It is possible</i> that <i>harm could arise</i> to a designated receptor from an identified hazard. It is <i>likely</i> that, at worst, if any harm was realised any effects would be <i>mild</i> .
Very Low Risk	The presence of an identified hazard does not give rise to the potential to cause harm to a designated receptor.

The term 'risk' in this instance refers to the risk that the source, pathway, receptor linkage for a given source of contamination is complete. It does not refer to immediate risk to individuals or features present on the site from potential contaminants and is intended to be used as a tool to assess the necessity of further investigation.

Our Locations

Birmingham

2 The Wharf
Bridge Street
Birmingham
B1 2JS
T. 0121 643 4694
birmingham@curtins.com

Bristol

Quayside
40-58 Hotwell Road
Bristol
BS8 4UQ
T. 0117 302 7560
bristol@curtins.com

Cambridge

50 Cambridge Place
Cambridge
CB2 1NS
T. 01223 631 799
cambridge@curtins.com

Cardiff

3 Cwrt-y-Parc
Earlswood Road
Cardiff
CF14 5GH
T. 029 2068 0900
cardiff@curtins.com

Douglas

Varley House
29-31 Duke Street
Douglas
Isle of Man
IM1 2AZ
T. 01624 624 585
douglas@curtins.com

Dublin

11 Pembroke Lane
Dublin 2
D02 CX82
T. 00353 1 507 9447
dublin@curtins.com

Edinburgh

1a Belford Road
