Project Reference:	7164
Project Description:	UoM Stopford 2 nd floor
Client:	University of Manchester Stopford Building, Oxford Road, Manchester, M13 9PL
Date:	September 2024
Revision	-

The 2nd floor windows to which this application relates are obscured by trees

The first 3 windows to the left elevation are unaffected by the works. The 4th and 5th can just be seen behind the tree and are affected by the works.

An interior shot of the room in question. Whilst the vertical slot windows externally are continuous, the interior shows that the radiator is fixed to a solid partition, and the window above the ceiling cannot be seen. This is synonymous of all spaces within the Stopford building, usually with solid panels glazed into the windows. In this instance a beige panel has been introduced behind the glass, more easily seen on the previous photo.

The Stopford Building Grafton Street elevation does not relate to the application but shows the black panel window infills mentioned above.

Nearby University of Manchester Kilburn building has similar black panel window infills (albeit with black frames rather than white), but also has glazed in louvres where required.
