| T1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 1        | Lime    | Road frontage |  |
| <p>Mature lime tree dominating the front of the property, the trees width and crown density is a result of several basal suckers that have been allowed to grow into substantial stems.</p> <p>We seek to remove the suckers, cutting them to hedge height (1.5m) whilst retaining the main tree with 3m of clear stem (it is envisaged that without the sucker shoots and low minor laterals will be unsupported and better removed).</p> <p>This will reduce the leaf area of the tree but no check to it is likely as the sucker shoots will be largely independent of the main tree, vigorous re-sprouting of suckers or main stem is expected and can be sensibly maintained by annual trimming.</p> |          |         |               |  |
| Spath Road Trees (Didsbury) Interim Preservation Order 1948                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |         |               |  |
