

Aluminium Roller Shutter

89mm Aluminium

An aesthetically pleasing solution that can provide security and protect against vandalism, whilst still offering light and vision to commercial and retail properties.

By using a combination of Punched and Solid Lath, our aluminium vision shutters offer an ideal solution to meet your security needs and provide a high level of vision and light. Ideal for securing large span openings, these shutters can be used internally, or externally with polycarbonate glazing.

Smaller openings and window applications utilise a single wall lath in solid or punched form, whilst very large openings can be secured using the twin walled version of the aluminium lath profile to provide an optimal blend of strength and vision.

Widely used in retail applications, the Vision Shutter is great asset to your estate, offering effective security without the oppressive appearance of solid shutter design.

Specification

- Manufactured from 89.5mm lath section in extruded aluminium alloy.
- Single wall or twin wall lath dependent upon application.
- Vision sections exclusively single wall lath.
- Vision sections supplied in a brick bond or in line punching pattern.
- Manufactured from 89.5mm deep lath section with reverse or normal roll facility, providing a visibly flat surface.
- Single wall lath section can be combined with clear polycarbonate glazing to exterior.
- Assembled incorporating nylon end locks for ease of operation.
