

existing fascia to be painted, repaired and made good where required

9mm gap between fascia and new signage to allow surface water run-off

new metal signage

metal fixings in colour to match fascia behind

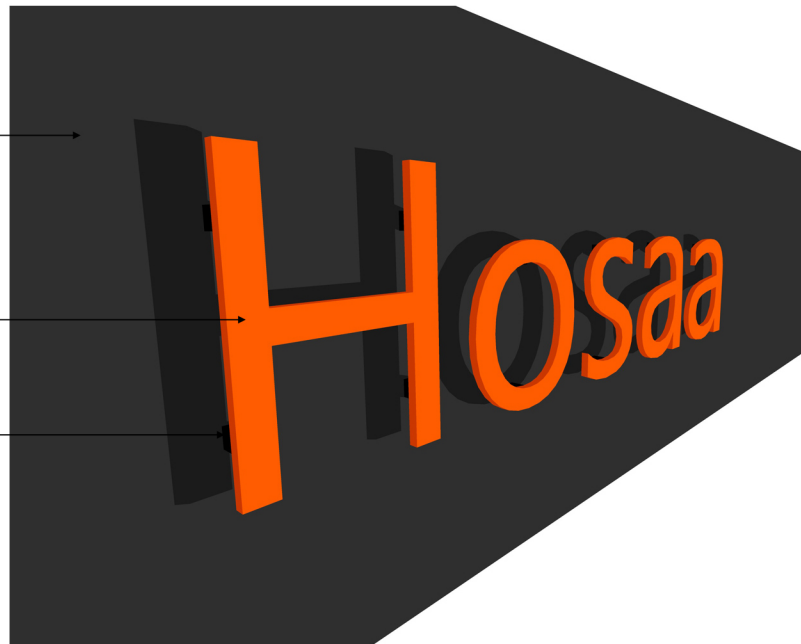

1:10 section through fascia

painted timber backboard in grey tone, which will sit pleasantly with the textured red brick above. The smooth finish will contrast, highlighting the different functions of the building.

Metal lettering in orange tone set forward from the backboard, giving depth with shadowing on sunny days as illustrated,

stainless steel fittings prevent issues with surface water

Visual illustrating signage

definitive line created between the new and old, giving hierarchy to the existing building above

orange signage proposed to hint at the vibrant interior styling, yet maintaining a timeless aesthetic externally when matched with the grey

sliding doors proposed as they have thinner frames than bifolds, which will grant better views into restaurant / bar. Changes proposed within Full Planning Application

sliding doors to retract back to cover this fixed glazed pane. This will offer protection to the and allow for better integration between the internal and external seating on the roadside. Changes proposed within Full Planning Application

proposed front elevation scale 1:100
(Including proposed changes to front elevation within Full Planning Application)

retractable canopy will give the elevation variance from day to day, creating interest and energy. Changes proposed within Full Planning Application.

building number in smaller font size on opposite side to restaurant name, giving balance and symmetry

minimal aesthetic to flat's entrance door, creating a cleaner front elevation

simple yet elegant design to door's manifestation. Reading "Hosaa" in the same colour and font as the proposed signage
