EXECUTIVE SUMMARY

SITE INFORMATION	**Client**	**Ancoats Manchester Ltd**
	Site Details and Current Land Use	The site currently comprises an irregular shaped plot of disused land, located off Great Ancoats Street in central Manchester. The site covers an area of approximately 0.04ha, with the centre of the site situated at approximate National Grid Reference 385040 398310. The nearest postcode is M1 2JP
	Proposed Development	It is understood that the proposed development is to comprise the construction of a 20 storey hotel building with a basement.
BACKGROUND INFORMATION	**Geology**	*Superficial Deposits: Till* Available geological mapping records the underlying superficial geology as Devensian Till. *Solid Geology: Chester Formation* Available geological mapping records the underlying solid geology as the Chester Formation described by the BGS as conglomerates and reddish brown, cross-bedded, pebbly sandstones with subordinate beds of red-brown mudstone.
	Hydrogeology	The Chester Formation is recorded as a low vulnerability Principal Aquifer and the Superficial Till deposits are recorded as a low vulnerability Secondary (Undifferentiated) Aquifer. The site is not recorded to lie within 1km of an Environment Agency groundwater Source Protection Zone. 6No. groundwater abstractions are recorded within 1km (nearest ~780m south) and 5No. discharge consents to groundwater are recorded within 1km of site (nearest ~920m southwest).
	Hydrology	The nearest surface water feature to site is approximately 140m northwest of site, identified as the Rochdale Canal, with a River Quality (GQA Grade) B. 5no. licensed discharge consents are recorded within 500m of site. No surface water abstractions are recorded within 500m of site.
	Site History	Earliest historical mapping (1848) recorded the northern part of the site to be occupied by part of a series of buildings that run along Lees Street (later renamed as Laystall Street), with an additional building present along the western perimeter of site. By 1891, the site is occupied by the 'White House' Public House and associated structures. A chimney was recorded between 1951 to 1999, located in between the public house and adjacent building to the west. By 2009 to the present no buildings are recorded on site.
	Environmental Sensitivity	1no. sensitive land use is recorded within 500m to the site – The River Irk (Moston Brook to River Irwell) located approximately 430m north of site is recorded as a Nitrate Vulnerable Zone.
	Unexploded Ordnance	A Stage 1 Preliminary Risk Assessment was completed for the site and concluded a Stage 2 Detailed Risk Assessment is not considered necessary prior to works commencing. However, as the cause of the clearance on Site cannot be precisely ascertained at a preliminary stage (it is thought to be a result of slum clearance), the possibility of shallow buried UXO remaining on Site cannot be completely ruled out. Therefore, a UXO Safety Awareness Briefing to all personnel conducting ground works would be considered prudent.
	Coal Mining	It is reported that the site is located within an area which may be affected by coal mining activity and a Coal Authority Consultant's report has been obtained for the site. This concludes that the site could have been affected by past underground coal mining, with a total of five seams known to have been historically worked to the east and northeast. The seams dip at between 13.3˚ and 19˚ to the south-west, with total thickness extracted recorded as varying between 120cm and 180cm. The final depths of these mines are reported between 412m and 1088mbgl at the time of their closure and as a result are not considered to adversely affect the development. The Coal Authority is not aware of any damage in the area due to geological faults or other lines of weakness that have been affected by coal mining and has no record of a mine gas emission requiring action. In addition, the property is not within a surface area that could be affected by present underground mining.

RECOMMENDED FURTHER WORKS	**Land Contamination**	Based upon our current conceptual understanding of the site and the prosed end use, the main Significant Pollutant Linkages identified are considered as follows: • Human Health (current and future site users and construction workers) – exposure to contaminants associated with potential made ground and potentially contaminative land uses on and in proximity to site through the ingestion, inhalation, and dermal contact pathways. • Controlled Waters (Principal Aquifer and Secondary (Undifferentiated) Aquifer) – risk to controlled waters from potential onsite contaminants of potential concern (CoPC) and subsequent migration to identified groundwater receptors. • Human Health (Future site end users and on site structures) – migration, ingress and inhalation of ground gas from nearby potentially infilled land. Given the assessment presented within this report additional works would be recommended to fully define the geoenvironmental issues associated with the site in relation to the proposed development. This phase of assessment would involve refinement of the site conceptual model developed as part of the preliminary risk assessment based on the findings of an exploratory ground investigation.
	Ground Engineering	Typical literature values are presented for the Boulder Clays and a tentative strength profile based on the nearby borehole data and the literature search is given. As a result of the height of the proposed building, a piled foundation is considered likely and it should be noted that the proximity of adjacent structures will need to be carefully considered when choosing the most appropriate pile type and methodology. Based on the available limited data, it is anticipated that a bored pile system would be appropriate for the site. Tentatively, based on the limited available data a 750mm bored pile installed to 25mbgl may provide a resistance in the region of 1800kN while a 900mm pile to this depth may provide around 2225kN. Extending the piles to 35m (ie 32m below the basement) gives resistances in the order of 2600kn and 3150kN, respectively. Given the scale of the proposed development, the potential presence of made ground and the anticipated ground conditions, a suitable geotechnical intrusive investigation would be recommended to confirm the engineering conditions and the constraints associated with the site and to ascertain foundation design parameters for the proposed development.

1 INTRODUCTION

1.1 Terms of Reference

1.1.1 TEC has been appointed by Shear Design Ltd on behalf of Ancoats Manchester Ltd to undertake a preliminary land contamination and geotechnical assessment of Great Ancoats Street, Manchester. All works were undertaken in accordance with our proposal letter dated 12th September 2022 and referenced RE.2104003.001_002C

1.2 Background

1.2.1 The site currently comprises an irregular shaped plot of disused land, located off Great Ancoats Street in central Manchester (Figure 1). The site covers an area of approximately 0.04ha, with the centre of the site situated at approximate National Grid Reference 385040 398310. The nearest postcode is M1 2JP.

1.2.2 It is understood that the proposed development is to comprise the construction of a 20 storey hotel building with a basement within the area shown in Figure 2.

1.2.3 The aim of these works is to provide preliminary information on land contamination risk and the ground engineering conditions and constraints associated with the site (Figure 2) with regard to the proposed development.

1.3 Scope of Works

1.3.1 The scope of work undertaken as part of this report is presented below:

- **Preliminary Risk Assessment:** this phase of assessment involves development of an initial site conceptual model, based on desk study research and a site reconnaissance survey, in order to establish whether or not there are potentially unacceptable risks.
- **Preliminary Geotechnical Assessment:** This phase of assessment comprises a review of publicly available ground engineering and geological information for the site to determine likely preliminary geotechnical parameters.

1.3.2 The above scope of work has been undertaken in accordance with current guidance such as LCRM - *Land contamination: risk management* (Environment Agency, 2020), BS10175+A2 (2017), BS5930:2015+A1:2020 and, where appropriate, Eurocode 7 and NHBC/ LABC.

2 PRELIMINARY RISK ASSESSMENT

2.1 Introduction

2.1.1 Information for this preliminary risk assessment (PRA) has been obtained from a site reconnaissance survey and a review of an Envirocheck® report obtained for the site (Appendix B and Appendix C) together with published available information where relevant.

2.2 Site Setting

2.2.1 A site reconnaissance survey was undertaken on 29th September 2022. A summary of the observations is presented in Table 2.1. Photographs taken during the site reconnaissance survey are presented in Appendix A.

Table 2.1: Site Details

Feature	Description	
Current Site Use	The site comprises a disused plot of land laid to gravelly hardstanding and enclosed with heras fencing. The area is currently occupied by numerous skips of building waste and piles of construction materials; noted to include metal, wood and rolls of insulation, likely due to construction/demolition works being carried out on the adjacent brick-built building. Immediately to the southeast of the site, and adjacent to Lomax Street, an area of slightly overgrown scrub vegetation is also surrounded by heras fencing.	
Site Context	The site is located with a predominantly commercial area in Manchester City Centre.	
Site Boundary Features	North	Laystall Street with commercial businesses housed within 'Urban Exchange' building beyond.
	East	Great Ancoats Street with disused commercial business park beyond
	South	Overgrown soft landscaping/scrub land; with Lomax Street and areas of car parking and several small commercial units beyond.
	West	Disused former apartment/hotel building
Site Topography	A topographical survey undertaken by Advanced Site Engineering Surveys in March 2021 and provided to TEC by the Client, reports that the site very gently slopes from 47.0m above ordnance datum (AOD) along the northern perimeter, to 46.6m AOD in the southern most corner.	
Hard and Soft Landscaping	The site is entirely covered by gravelly hardstanding. It is noted that an area of overgrown soft landscaping/scrub land was observed immediately adjacent to the southeastern site boundary.	
Trees and Vegetation	There are no trees on or nearby the site, with the only overgrown scrub vegetation present immediately adjacent to the southeast.	
Fuel, Hazardous Chemicals and Waste Materials Storage	No evidence of fuel storage or wate material storage was observed on site at the time of inspection.	
Asbestos Containing Materials	No potential asbestos containing materials were observed on the ground surface during the site reconnaissance.	
Site Drainage	No formalised drainage was observed on site, however several manhole covers and drainage covers were observed on the pavement that runs along the northern and eastern perimeter.	
Evidence of Potential Contamination	No visual or olfactory evidence of potential contamination was noted on the ground surface during the site reconnaissance.	
Ground Stability Hazards	No visual evidence of ground subsidence/ movement was observed.	

2.3 Site History

2.3.1 Details of the history of the site and surrounding area, relevant to this preliminary risk assessment, have been obtained through the review of historical Ordnance Survey (OS) mapping. A summary of potentially

significant features is recorded in Table 2.2, which should be read in conjunction with the full map extracts contained within Appendix B.

Table 2.2: Historical Features Summary

On Site Features			OS Dates
The northern part of site is occupied by part of a series of buildings that run along Lees Street (later renamed as Laystall Street), whilst an additional building is also present along the western perimeter of site.			1848 - 1891
The previous layout appears to have been demolished and replaced, with the eastern half of site now occupied by the 'White House' Public House (No. 122 Great Ancoats Street). It is noted that several smaller buildings are present immediately adjacent to site, to the south east along Great Ancoats Street.			1891 – 2009
Chimney listed between the public house and the adjacent building to the west of site.			1928 - 1999
No buildings recorded on site or immediately adjacent to the southeast.			2009 - 2022
Surrounding Features	**Distance**	**Direction**	**OS Dates**
Tank	~20m	West	1891 - 1922
	~95m	West	1951 - 1958
	~200m	Northwest	1951 - 1958
Canal	~140m	Northwest	1891 - 2022
	~180m	Southeast/ southwest	1891 – 2022
Disused Foundry (clothing factory and iron & steel warehouse from 1908. Clothing Factory demolished and iron/steel warehouse replaced with 'works' and warehouse by 1958, Chemical warehouse by 1962)	~50m	South	1891 – 2016
Saw Mill	~100m	Northwest	1891 – 1908
	~135m	West	1891 – 1951
	~140m	West	1891 – 1908
	~130m	North	1891 – 1951
	~150m	Northwest	1891 – 1908
	~60m	West	1908 – 1922
	~180m	West	1922 – 1958
	~90m	East	1951 – 1958
Whittles Croft Wharf	~180m	Southwest	1891 – 1951
5No. Wharfs (and 1No. tank)	~190m	South	1891 – 1958
5No. Wharfs	~210m	Northwest	1891 – 1951
Wharf	~20m	North	1891 – 1951
	~90m	North	1891 – 1951
	~130m	Northwest	1891 – 1951
Tin Works	~235m	Southwest	1891 – 1908
	~130m	East	1908 – 1951
Phoenix Works (Brass & Iron Works) (Crusader works No2 from 1951)	~240m	South	1891 – 1922
Paper Warehouse (1928), later textiles factory (1962), later works (1988)	Adjacent	West	1928 - 1992
Cabinet Factory	Adjacent	South	1928
Garage	~200m	Southwest	1951 – 1992
	~230m	Northwest	1951 – 1992
	~110m	Northwest	1958 – 1999
	~200m	Northwest	1958 – 1992
	~15m	South	1992 – 1999
Copper Works	~160m	Southeast	1891 – 1908
John Street Coal Wharf (Saw mill from 1908, unnamed works from 1958)	~170m	Northeast	1891 – 1991
Cotton Mill	~180m	North	1891 – 1958
	~205m	Southwest	1891 – 1908
	~220m	North	1891 – 1958
Engineering Works	~150m	North	1951 – 1958

Surrounding Features	Distance	Direction	OS Dates
Works	~45m	West	1951 – 1999
	~110m	North	1958 – 1991
	~120m	Northeast	1958 – 1991
	~145m	Northeast	1958 – 1991
	~15m	West	1968 – 1999
	~15m	South	1968 – 1992
	~70m	South	1968 – 2016
Builders Yard	~180m	Northwest	1958 – 1999
	~220m	Northwest	1958 – 1999

2.4 Geology

2.4.1 A summary of available geological information for the area is provided in Table 2.3.

Table 2.3: Geological Setting

BGS Geological Mapping (Ref. Solid and Drift 1:50,000 map – Manchester, Sheet 85)			
Geological Unit		**Thickness**	**BGS Description**
Made Ground		Unknown	Not recorded on geological mapping but may be present on site
Superficial Deposits: Till		Unknown	-
Solid Geology: Chester Formation		Typically, up to 220m	The formation typically comprises conglomerates and reddish brown, cross-bedded, pebbly sandstones with subordinate beds of red-brown mudstone. The conglomerates have a reddish brown sandy matrix and consist mainly of pebbles of brown or purple quartzite, with quartz conglomerate and vein quartz. In this area, the formation generally fines upwards, from dominantly conglomerates at the base, to interbedded conglomerates and sandstones, with sandstone and pebbly sandstone predominant in the upper part, and rare mudstones.
BGS Borehole Records			
BGS Reference	**Distance/ Direction**	**Depth**	**Recorded Strata**
SJ89NE86	~50m East	0.53m 1.22m 4.88m 11.2m 13.41m 17.68m 23.16m	Made ground Yellow clay Brown silty clay Brown clay Loamy sand Boulder clay Loamy sand

Gravel if siltstone Firm dark greyish brown mottled black slightly sandy clay (fill?) Stiff blueish grey mottled light brown locally closely fissured clay Stiff brown mottled blueish grey clay

BGS Estimated Soil Chemistry	
Element	**Estimated Concentration**
Arsenic	15 – 25 mg/kg
Cadmium	<1.8 mg/kg
Chromium	60 - 90 mg/kg
Lead	100 – 200 mg/kg
Nickel	30 – 45 mg/kg
Radon	
Radon Potential	**Radon Protection Requirement**
Lower Probability Radon Area (less than 1% of homes are estimated to be at or above the Action Level)	None reported to be required

2.5 Hydrogeology

2.5.1 The Envirocheck® report and Environment Agency information records the following hydrogeological setting of the site.

Table 2.4: Hydrogeological Setting

Aquifer Status			
Geological Unit	**Groundwater Vulnerability/ Aquifer Designation**	**Environment Agency Aquifer Classification**	**Potential Hydraulic Gradient Direction**
Chester Formation	Low Vulnerability / Principal Aquifer	Layers of rock or drift deposits that have high intergranular and/or fracture permeability - meaning they usually provide a high level of water storage. They may support water supply and/or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifers.	-
Geological Unit	**Groundwater Vulnerability/ Aquifer Designation**	**Environment Agency Aquifer Classification**	**Potential Hydraulic Gradient Direction**
Superficial Till Deposits	Low Vulnerability / Secondary (Undifferentiated) Aquifer	Assigned in cases where it has not been possible to attribute either Category A or B to a rock type. In most cases, this means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type.	-
Source Protection Zones			
None recorded within 1km			
Groundwater Abstractions			
6No. recorded within 1km			
Details	**Abstraction Use**		**Distance/ Direction**
Moseley Rubber Co Ltd	Rubber: General Cooling		~780m south
West Contracting	Other Industrial/Commercial/Public services: Non-Evaporative Cooling		~870m southwest
			~870m southwest
British Waterways	Other Industrial/Commercial/Public services: General Cooling		~970m northeast
	Not supplied		~975m northeast
British Telecommunications Plc	Other Industrial/Commercial/Public services: General Cooling		~980m west

Discharge Consents to Groundwater		
5No. recorded within 1km		
Receiving Water	**Effluent Type**	**Distance/ Direction from Site**
Underground Water	Trade discharges – cooling water	2No. records at ~920m southwest
		3No. records at ~935m southwest
BGS Groundwater Flooding Susceptibility		
On site – Limited potential for groundwater flooding to occur		

2.6 Hydrology

2.6.1 The hydrological setting of the site is summarised in Table 2.5:

Table 2.5: Hydrological Setting

Nearest Surface Water Features		
Feature	**River Quality (GQA Grade)**	**Distance/ Direction from Site**
Rochdale Canal	B	~140m northwest
Surface Water Abstractions		
None recorded within 500m		
Details	**Abstraction Use**	**Distance/ Direction from Site**
Licensed Discharge Consents		
5No. recorded within 500m		
Receiving Water	**Effluent Type**	**Distance/ Direction from Site**
Shooters Brook	United Utilities Water Ltd: Sewage Discharges – Final/Treated Effluent	~130m east
		~160m southeast
River Medlock	United Utilities Water Ltd: Public Sewage: Storm Sewage Overflow	~200m south
Not Supplied		~335m southwest
Manchester & Ashton Canal	Edwin Butterworth & Co: Discharge of Other Matter – Surface Water	~350m east
Pollution Incidents		
9No. recorded within 500m		
Receiving Water	**Pollutant/ Incident**	**Distance/ Direction from Site**
Not Given	Unknown: Category 3 - Minor Incident	~180m north
		~280m north
		~350m east
		~485m northeast
	Miscellaneous – Foam: Category 3 – Minor Incident	~185m north
	Miscellaneous – Unknown: Category 3 – Minor Incident	~455m east
	Chemicals -Paints/Dyes: Category 3 – Minor Incident	~255m southwest
		~320m southeast
	Contaminated Materials – Soils & Sub-soils: Category 3 – Minor Incident	~285m north
Flooding from Rivers or Seas		
On Site Designation	**Off Site Areas of Flooding**	
Flood Zone 1	~635m southeast: Extent of flooding and extreme flooding from rivers or seas without defences	

2.7 Environmental Data

2.7.1 Additional relevant environmental data from the Envirocheck® report for the site is summarised in Table 2.6.

Table 2.6: Additional Environmental Data Summary

Landfill Sites		
No current or historical landfills recorded within 500m		
Potentially Infilled Land (Water)		
19No. Recorded within 500m		
Type	**Distance/ Direction from Site**	**Date on Mapping**
Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	~30m west	1909
	~70m northwest	1923
	~75m northwest	1848
	~155m northwest	1956
	~160m northeast	1909
	~180m southeast	1956
	~180m south	1956
	~185m northeast	1923
	~190m northeast	1894

Local Authority Pollution Prevention and Controls	Presbar Diecastings Ltd – PG2/1 Furnaces for the extraction of non-ferrous metal from scrap	~90m south ~100m south ~390m north
	Presbar Diecastings Ltd – PG2/6 Aluminium and aluminium alloy processing	~115m southeast
	Central Taxi Spares Ltd – PG1/1 Waste oil burners, less than 0.4MW net rated thermal input	~315m south
	Bill Howarth Metals – PG2/1 Furnaces for the extraction of non-ferrous metal from scrap	~460m north
	Express Printers Manchester Ltd – PG6/21 Hide and skin processes	~480m northwest
Local Authority Pollution Prevention and Control Enforcements	Air Pollution Control Enforcement Notice – Failure to update furnace emission records	~335m southwest
	Air Pollution Control Enforcement Notice – Failure to minimise furnace emissions and continuously monitor particulates	~460m north
Sensitive Land Uses		
1No. recorded within 500m		
Category	**Details**	**Distance/ Direction from Site**
Nitrate Vulnerable Zones	River Irk (Moston Brook to River Irwell)	~430m north

2.8 Engineering Considerations

2.8.1 Engineering considerations identified from the Envirocheck® report for the site are summarised in Table 2.7:

Table 2.7: Engineering Considerations

Ground Stability Hazards						
Hazard	**Hazard Potential**					
	No Hazard	**Negligible**	**Very Low**	**Low**	**Moderate**	**High**
Collapsible ground			X			
Compressible ground	X					
Ground dissolution	X					
Landslide			X			
Running sand			X			
Shrink/swell clays			X			
Coal mining		X				
Non-coal mining	X					

BGS Recorded Mineral Sites			
2No. recorded within 1km			
Site Name	**Type/Commodity**	**Status**	**Distance/ Direction from Site**
Holt Town Brick Field	Opencast – Till	Ceased	~965m east
Ardwick Lime Works Pit	Underground – Limestone (Great Mine Limestone)	Ceased	~1000m east

2.9 Unexploded Ordnance (UXO)

2.9.1 A Stage 1 Preliminary UXO Risk Assessment was completed for the site by Brimstone Site Investigation, Report reference PRA-22-1927 (Appendix G).

2.9.2 This assessment identified a small area of clearance in the north of the site footprint, likely due to planned slum clearance, known to have occurred on Great Ancoats Street during the 20th century, however, may be indicative of bomb damage. The assessment concluded a Stage 2 Detailed Risked Assessment is not concluded necessary prior to works commencing, however since the cause of the clearance on site could not be ascertained at a preliminary stage, the possibility of shallow buried UXO remaining on site cannot be completely ruled out. Therefore, a UXO Safety Awareness Briefing to all personnel conducting ground works would be considered prudent.

2.10 Regulatory Consultations

2.10.1 Regulatory consultations were undertaken with the relevant departments at Manchester City Council with respect to possible environmental issues and ground conditions on-site and in the surrounding area. A summary of the response is provided below in Table 2.8. The full response is presented in Appendix D.

Table 2.8: Regulatory Consultations Summary

Contaminated Land Section– Manchester City Council	• No landfill recorded were identified within 250m • The council have not identified the site or surrounding area as being contaminated land as defined under the Environmental Protection Act 1990, Part 2A. The council have not assigned a risk rating to the site and have no current proposals to investigate the site or surrounding area under the Environmental Protection Act 1990, Part 2A. • No Environmental Protection Act 1990 Notices were identified within 100m • No Waste Management Licenses were identified within 250m • No Part A(1) or Part A(2) Permitted Processes were identified within 250m.

2.11 Coal Mining

2.11.1 It is reported that the site is located within an area which may be affected by coal mining activity and a Coal Authority Consultant's report has been obtained for the site. The full report is presented in Appendix F and summarised as follows:

- The site could have been affected by past underground coal mining, with a total of five seams known to have been historically worked east and northeast. The seams dip at between 13.3 and 19 degrees to the south-west, with total thickness extracted recorded as varying between 120 and 180cm. The final depths of these mines are reported between 412m and 1088mbgl at the time of their closures, the latest of which was closed in 1961.
- The property is not within a surface area that could be affected by present underground mining.
- The property is not in an area where a license has been granted to remove or otherwise work coal using underground methods. The property is not in an area likely to be affected from any planned future underground coal mining.
- No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that land is at risk of subsidence.
- The Coal Authority is not aware of any damage due to geological faults or other lines of weakness that have been affected by coal mining.
- The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.
- There are no license requests outstanding to remove coal by opencast methods within 800m of the boundary.
- The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50m of the enquiry boundary, since 31 October 1994. There is no current Stop Notice delaying the start of remedial works or repairs to the property.
- The Coal Authority has no record of a mine gas emission requiring action.
- The property has not been subject to remedial works, by or on behalf of the Coal Authority, under its Emergency Surface Hazard Call Out Procedures.
- The property is not in an area where a notice to withdraw support has been given.
- The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

2.12 Outline Conceptual Model

2.12.1 In accordance with the Environment Agency Land contamination: risk management guidance, potential source-pathway-receptor pollutant linkages identified from the desk study phase are summarised in the following sections.

2.13 Potential Sources

2.13.1 Potential sources of contamination identified on and within the vicinity of the site are summarised below:

On Site Sources

- Made ground of unknown chemical composition;

Off Site Sources

- Current/Historic nearby industrial land uses.
- Nearby potentially Infilled Land.

2.13.2 No landfills are identified within 250m of the site.

2.14 Potential Receptor Pathways

2.14.1 Potential receptors identified as part of this preliminary risk assessment are:

- Current/future site users;
- Construction workers;
- Controlled Waters (Principal and Secondary (undifferentiated) Aquifers)
- Proposed development/ structures.

2.15 Potential Pathways

2.15.1 Potential contaminant pathways relating to the identified receptors and contaminants of concern include:

- Dermal contact – contact with soil, dust or water;
- Ingestion - ingestion of soil, dust or water;
- Inhalation – inhalation of soil, dust or vapours;
- Vertical migration – e.g. seepage of contaminants at the ground surface (i.e. leakage/spillage of hydrocarbons) through cracks in hardstanding and/or leaching of contaminants within the unsaturated zone resulting in vertical contaminant migration; and
- Horizontal migration – e.g. lateral migration of contaminants within the saturated zone and along preferential pathways such as drainage pipe bedding.

2.16 Hazard Assessment and Risk Estimation

2.16.1 Potential pollutant linkages identified as part of this preliminary risk assessment are summarised in the Outline Site Conceptual Model presented in Table 2.9. References to risk estimations are made in accordance with the methodology presented in CIRIA publication C552 (2001) titled *'Contaminated Land Risk Assessment: A Guide to Good Practice'* and summarised in Appendix E.

Table 2.9: Outline Conceptual Model

Potential Hazard/ Source	Potential Receptor	Potential Pathway to Receptors	Potential Consequence of Source-Receptor Linkage	Potential Likelihood for Significant Source-Receptor Linkage	Risk Classification
Made ground and potentially contaminative processes – on site	Current and future site users and construction workers	Exposure to potential contaminants through ingestion, inhalation and dermal contact.	Medium	**Low Likelihood to Likely**: Given the development history recorded on site, and observations made during the site reconnaissance, the presence of made ground of unknown thickness and chemical composition, or shallow contaminants on site cannot be discounted at this stage.	**Moderate/ Low Risk**
	Controlled waters (Principal/ Secondary Aquifers,)	Leaching of potential contaminants from made ground and vertical and lateral migration through the saturated zone to controlled waters.	Medium	**Low Likelihood**: Given the potential presence of made ground of unknown chemical composition and the recorded aquifer status of the underlying strata (Principal, Secondary undifferentiated Aquifer), a potential risk to controlled waters, whilst likely to be low, cannot be fully discounted. Notwithstanding this, the presence of hardstanding across the majority of the proposed development area may limit the potential for infiltration and subsequent contaminant migration.	**Low Risk**
	Current and future site users, construction workers and proposed development	Migration, ingress and accumulation of ground gasses.	Severe	**Low Likelihood**: Made ground, if present, may act as a potential source of ground gas, subject to thickness and chemical composition.	**Moderate/ Low Risk**
Current and historic nearby contaminative processes. –off site	Current and future site users, construction workers, controlled waters and proposed development.	Potential on-site contaminant / ground gas migration from off-site sources. Exposure to potential contaminants through ingestion, inhalation and dermal contact.	Medium to Severe	**Unlikely to Low Likelihood**: Potentially contaminative current and historic processes have been identified in proximity to the site, including nearby historical works factories and warehouses.	**Moderate/ Low Risk**

3 GROUND ENGINEERING

3.1 Proposed Development

3.1.1 It is understood that the proposed development is to comprise the construction of a 20 storey hotel building with a basement within the area shown in Figure 2.

3.2 Potential Geotechnical Hazards

3.2.1 Available geological mapping records the underlying solid geology as the Chester Formation described by the BGS as red-brown, yellow or yellow mottled very fine to coarse grained cross-bedded sandstones that can be locally micaceous, silty or argillaceous, pebbly or conglomeratic.

3.2.2 It is reported that the hazard for Collapsible Ground, Landslide, Running Sand and Shrink/Swell Clay is 'Very Low'. A reported rating of 'No Hazard' is recorded for Compressible Ground and Ground Dissolution. In addition, it is reported that the site is located within an area which may be affected by coal mining activity and a Coal Authority Consultant's report has been obtained for the site.

3.2.3 2no. BGS Mineral Sites are recorded within 1km of site, 1no. is a ceased opencast site for Till and 1no. is a ceased underground site for Limestone (Great Mine Limestone).

3.3 Likely Foundation Requirements

3.3.1 The available literature suggests it likely that the Boulder Clays present at the site to have a typical plasticity index in the range of 10% to 20% and bulk density of between 19.5kN/m^3 and 21.0kN/m^3. The literature also indicates undrained strength in excess of 200kN/m^2 are recorded. However, based on the available limited borehole data, the underlying Boulder Clay is generally describes as being stiff to very stiff in consistency. This being the case, it is considered likely that undrained strengths in excess of 80kN/m^2 may be applicable and the review suggests that to typical depths of around 10mbgl, a general increase in strength appears to be present. Below this depth a tentative undrained strength of 150kN/m^2 would appear to be appropriate. Notwithstanding this, a review of the available literature may suggest that typically undrained strengths greater that 150kN/m^2 are recorded withing these materials.

3.3.2 As a result of the height of the proposed building and the likely loads associated with it, it is considered that a piled foundation may be appropriate. It should be noted that the proximity of adjacent structures will need to be carefully considered when choosing the most appropriate pile type and methodology and it is suggested that a specialist piling contractor should be consulted regarding the piling options and detailed design of the most appropriate option. However, it is anticipated that based on the available limited data, a bored pile system would be appropriate for the site.

3.3.3 Following the recommendation given in Eurocode 7 and when assuming the undrained strengths given above and a basement depth of 3mbgl, a 750mm bored pile installed to 25mbgl is likely to provide a resistance in the region of 1800kN while a 900mm pile to this depth may provide around 2225kN. Extending the piles to 35m (ie 32m below the basement) gives resistances in the order of 2600kn and 3150kN, respectively. Initial pile capacities are summarised below:

Table 3.1: Indicative Pile Bearing Resistances

Pile diameter	Pile Resistance		
	25mbgl	30mbgl	35mbgl
750mm	1800kN (1250kN)	2200kN (1600kN)	2600kN (1900kN)
900mm	2225kN (1525kN)	2700kN (1900kN)	3150kN (2300kN)

Note: Tension design resistance given in brackets

3.4 Preliminary Geotechnical Recommendations

3.4.1 Based upon the findings of this desk study, the scale of the proposed development and the anticipated ground conditions, it is recommended that an appropriate geotechnical investigation be undertaken to ascertain underlying ground conditions and foundation design parameters for the proposed development.

4 RECOMMENDED FURTHER WORKS

4.1.1 Based upon our current conceptual understanding of the site and the prosed end use, the main Significant Pollutant Linkages identified are considered as follows:

- Human Health (current and future site users and construction workers) – exposure to contaminants associated with potential made ground and potentially contaminative land uses on and in proximity to site through the ingestion, inhalation, and dermal contact pathways.
- Controlled Waters (Principal Aquifer and Secondary (Undifferentiated) Aquifer) – risk to controlled waters from potential onsite contaminants of potential concern (CoPC) and subsequent migration to identified groundwater receptors.
- Human Health (Future site end users and on site structures) – migration, ingress and inhalation of ground gas from nearby potentially infilled land.

4.2 Geoenvironmental Risk Management Recommendations

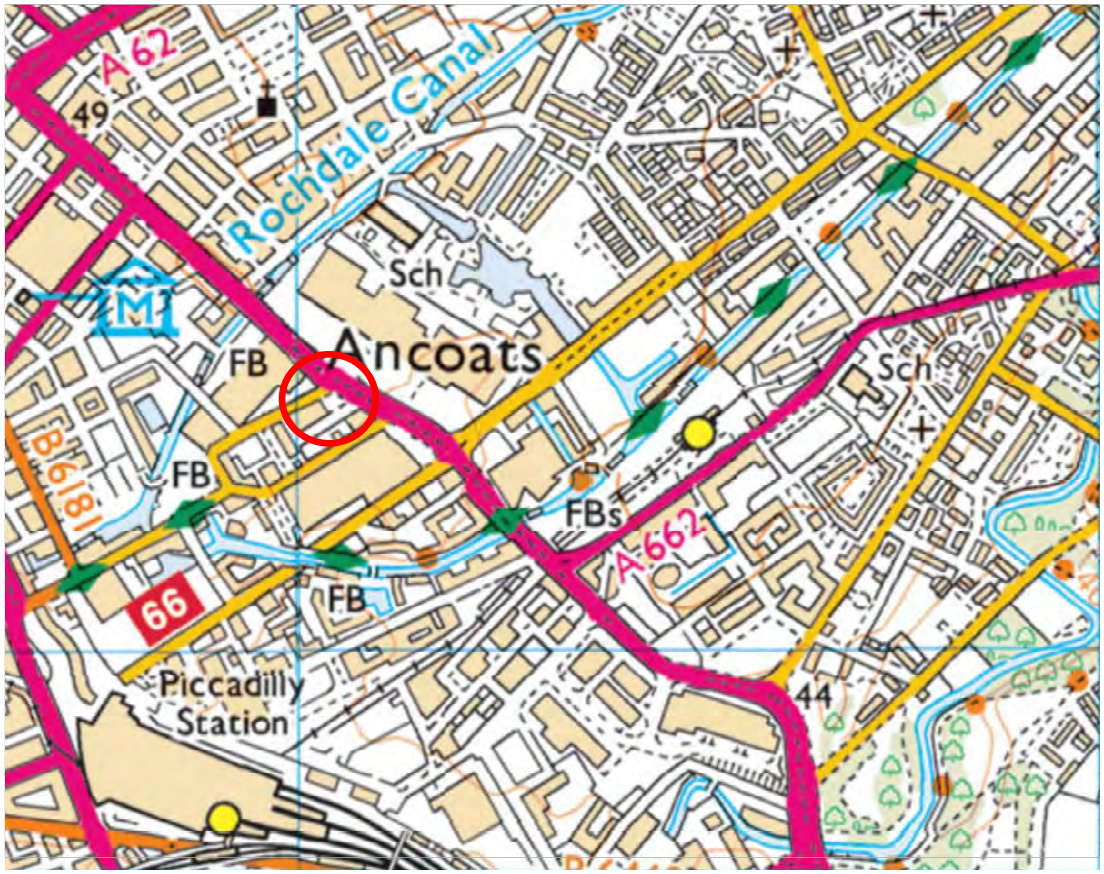

4.2.1 Given the assessment presented within this report additional works would be recommended to fully define the geoenvironmental issues associated with the site in relation to the proposed development. This phase of assessment would involve refinement of the site conceptual model developed as part of the preliminary risk assessment based on the findings of an exploratory ground investigation.

4.3 Geotechnical Risk management Recommendations

4.3.1 Given the scale of the proposed development, the potential presence of made ground and the anticipated ground conditions, a suitable geotechnical intrusive investigation would be recommended to confirm the engineering conditions and the constraints associated with the site and to ascertain foundation design parameters for the proposed development.

Lancashire And Furness

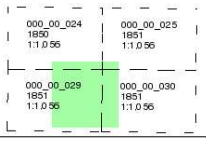

Published 1850 - 1851

Source map scale - 1:1,056

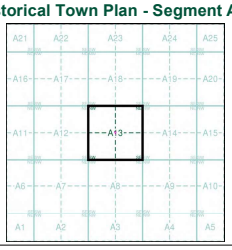

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1891

Source map scale - 1:500

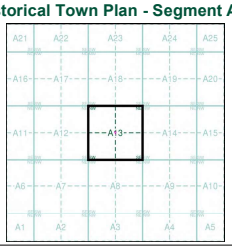

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1893

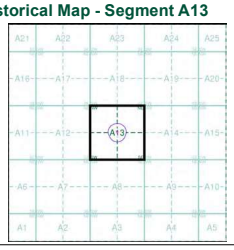

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Ordnance Survey Plan

Published 1953 - 1965

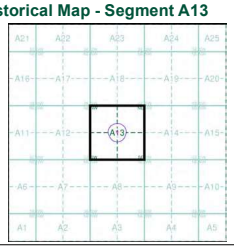

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1974 - 1976

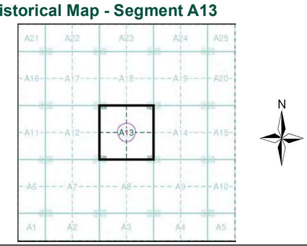

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1992

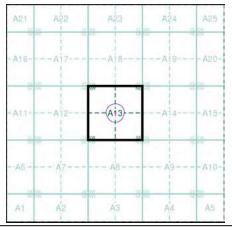

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Lancashire And Furness

Published 1848

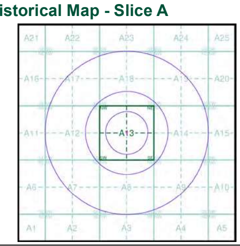

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Lancashire And Furness

Published 1894 - 1896

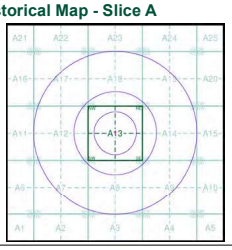

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Manchester

Published 1975

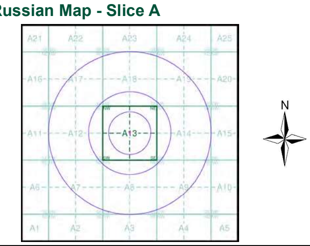

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

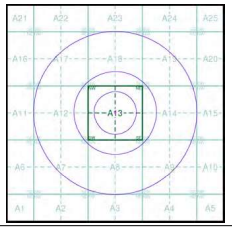

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

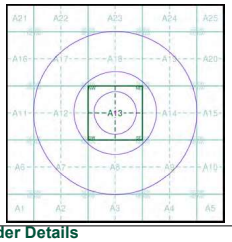

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Waste					
BGS Recorded Landfill Sites					
Historical Landfill Sites	pg 44				1
Integrated Pollution Control Registered Waste Sites					
Licensed Waste Management Facilities (Landfill Boundaries)					
Licensed Waste Management Facilities (Locations)	pg 44				6
Local Authority Landfill Coverage	pg 45	1	n/a	n/a	n/a
Local Authority Recorded Landfill Sites					
Potentially Infilled Land (Non-Water)	pg 45				3
Potentially Infilled Land (Water)	pg 45		14	5	12
Registered Landfill Sites	pg 47				1
Registered Waste Transfer Sites	pg 48				3
Registered Waste Treatment or Disposal Sites	pg 49				2
Hazardous Substances					
Control of Major Accident Hazards Sites (COMAH)					
Explosive Sites					
Notification of Installations Handling Hazardous Substances (NIHHS)					
Planning Hazardous Substance Consents					
Planning Hazardous Substance Enforcements					

Summary

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Geological					
BGS 1:625,000 Solid Geology	pg 50	Yes	n/a	n/a	n/a
BGS Estimated Soil Chemistry	pg 50	Yes	Yes	Yes	Yes
BGS Recorded Mineral Sites	pg 52				2
BGS Urban Soil Chemistry	pg 52			Yes	Yes
BGS Urban Soil Chemistry Averages	pg 55	Yes			
CBSCB Compensation District			n/a	n/a	n/a
Coal Mining Affected Areas	pg 55	Yes	n/a	n/a	n/a
Mining Instability	pg 55	Yes	n/a	n/a	n/a
Man-Made Mining Cavities					
Natural Cavities					
Non Coal Mining Areas of Great Britain				n/a	n/a
Potential for Collapsible Ground Stability Hazards	pg 56	Yes	Yes	n/a	n/a
Potential for Compressible Ground Stability Hazards				n/a	n/a
Potential for Ground Dissolution Stability Hazards				n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 56	Yes	Yes	n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 56	Yes	Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 56	Yes	Yes	n/a	n/a
Radon Potential - Radon Affected Areas			n/a	n/a	n/a
Radon Potential - Radon Protection Measures			n/a	n/a	n/a
Industrial Land Use					
Contemporary Trade Directory Entries	pg 57		57	142	430
Fuel Station Entries	pg 111			1	3
Points of Interest - Commercial Services	pg 111		4	14	74
Points of Interest - Education and Health	pg 119			1	
Points of Interest - Manufacturing and Production	pg 119		10	51	110
Points of Interest - Public Infrastructure	pg 133		2	4	21
Points of Interest - Recreational and Environmental	pg 135				9
Gas Pipelines					
Underground Electrical Cables

Please note that the Environment Agency / Natural Resources Wales / SEPA have a charging policy in place for enquiries.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.
The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

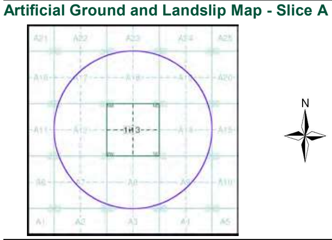

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

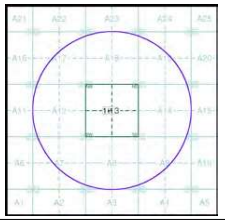

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

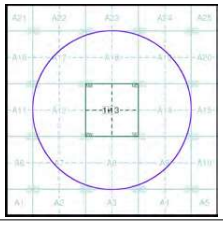

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Risk Methodologies and Evaluation

Risk Evaluation

The qualitative assessment methodology presented in CIRIA publication C552 (2001) titled *'Contaminated Land Risk Assessment: A Guide to Good Practice'* has been used by TEC for the basis of evaluating potential risk.

The method requires an assessment of the:

- magnitude of the probability or likelihood of the risk occurring (Table 1); and
- magnitude of the potential consequence or severity of the risk occurring (Table 2)

Table 1. Classification of Probability

Classification	Definition
High likelihood	There is a pollution linkage and an event that either appears very likely in the short-term and almost inevitable over the long-term, or there is evidence at the receptor of harm or pollution.
Likely	There is a pollution linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short-term and likely over the long-term.
Low likelihood	There is a pollution linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such an event would take place, and is less likely in the short-term.
Unlikely	There is a pollution linkage but circumstances are such that it is improbable that an event would occur even in the very long-term.

Table 2. Classification of Consequence

Classification	Definition	Examples
Severe	Short-term (acute) risk to human health likely to result in "significant harm" as defined by the Environment Protection Act 1990, Part IIA. Short-term risk of pollution of sensitive water resource. (Note: Water Resources Act contains no scope for considering significance of pollution). Catastrophic damage to buildings/property. A short-term risk to a particular ecosystem, or organisation forming part of such ecosystem (note: the definitions of ecological systems within the draft circular on Contaminated Land, DETR, 2000).	High concentrations of cyanide on the surface of an informal recreation area. Major spillage of contaminants from site into controlled water. Explosion, causing building collapse (can also equate to a short-term human health risk if buildings are occupied).
Medium	Chronic damage to human health ("significant harm" as defined in DETR, 2000). Pollution of sensitive water resources. (Note: Water Resources Act contains no scope for considering significance of pollution). A significant change in a particular ecosystem, or organism forming part of such ecosystem, (note: the definitions of ecological systems within draft circular on Contaminated Land, DETR, 2000).	Concentration of a contaminant from site exceeding the generic or site-specific assessment criteria. Leaching of contaminants from a site to a major or minor aquifer. Death of a species within a designated nature reserve.
Mild	Pollution of non-sensitive water resources. Significant damage to crops, buildings, structures and services ("significant harm" as defined in the draft circular on Contaminated Land, DETR, 2000). Damage to sensitive buildings/structures/services or the environment.	Pollution of non-classified groundwater. Damage to building rendering it unsafe to occupy (for example foundation damage resulting in instability).
Minor	Harm, although not necessarily significant harm, which may result in a financial loss, or expenditure to resolve. Non-permanent health effects to human health (easily prevented by means such as personal protective clothing etc), easily repairable effects of damage to buildings, structures and services.	The presence of contaminants at such concentrations that protective equipment is required during site works. The loss of plants in a landscaping scheme. Discolouration of concrete.

The combination of the two factors is determined using Table 3 and the resulting level of risk is described in Table 4. The evaluation can be applied to each of the scenarios identified in the risk model and the overall risk assessed.

Table 3. Combination of Consequence with Probability

		Consequence			
		Severe	Medium	Mild	Minor
Probability	High Likelihood	**Very High Risk**	**High Risk**	**Moderate Risk**	**Moderate/Low Risk**
	Likely	**High Risk**	**Moderate Risk**	**Moderate/Low Risk**	**Low Risk**
	Low Likelihood	**Moderate Risk**	**Moderate/Low Risk**	**Low Risk**	**Very Low Risk**
	Unlikely	**Moderate/Low Risk**	**Low Risk**	**Very Low Risk**	**Very Low Risk**

Table 4. Description of risks and likely action required

Very High Risk	There is a high probability that severe harm could arise to a designated receptor from an identified hazard, or there is evidence that severe harm to a designated receptor is currently happening. This risk, if realised, is likely to result in a substantial liability. Urgent investigation (if not undertaken already) and remediation are likely to be required.
High Risk	Harm is likely to arise to a designated receptor from an identified hazard. Realisation of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short-term and are likely over the longer-term.
Moderate Risk	It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the long-term.
Low Risk	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very Low Risk	There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.

Using the risk model the pollutant linkages are identified and a preliminary estimate of risk undertaken. If there is no pollutant linkage identified, then there is no risk. If the estimate of risk for all the linkages and exposure scenarios is very low at this stage then it is likely that no further assessment will be required.

Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

Site investigations
None recorded within 50 metres of the enquiry boundary.

Remediated sites
None recorded within 50 metres of the enquiry boundary.

Coal mining subsidence
The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas
None recorded within 500 metres of the enquiry boundary.

Mine water treatment schemes
None recorded within 500 metres of the enquiry boundary.

Copyright © 2022 The Coal Authority

Section 3 – Licensing and future mining activity

Future underground mining
None recorded.

Coal mining licensing
None recorded within 200 metres of the enquiry boundary.

Court orders
None recorded.

Section 46 notices
No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

Withdrawal of support notices
The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

Payments to owners of former copyhold land
The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Copyright © 2022 The Coal Authority

Section 4 – Further information

The following potential risks have been identified and as part of your risk assessment should be investigated further.

Development advice

The site is within an area of historical coal mining activity. Should you require advice and/or support on understanding the mining legacy, its risks to your development or what next steps you need to take, please contact us.

For further information on specific site or ground investigations in relation to any issues raised in Section 4, please call us on 0345 762 6848 or email us at groundstability@coal.gov.uk.

Copyright © 2022 The Coal Authority

Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **call us on 0345 762 6848** or **email us at groundstability@coal.gov.uk.**

Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

Copyright © 2022 The Coal Authority

Opencast mines
Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

Coal Authority managed tips
Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

Site investigations
Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

Remediated sites
Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

Coal mining subsidence
Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

Mine gas
Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission.

Copyright © 2022 The Coal Authority

Mine water treatment schemes
Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

Future underground mining
Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

Coal mining licensing
Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

Court orders
Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

Section 46 notices
Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

Withdrawal of support notices
Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

Payment to owners of former copyhold land
Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.

Brimstone Site Investigation
Stage 1 Preliminary UXO Risk Assessment

STAGE 1 PRELIMINARY UXO RISK ASSESSMENT

REPORT REF: PRA-22-1927 | Revision: 0

Client: TEC
Project: Great Ancoats Street, Manchester
Date: 07/10/2022

BRIMSTONE SITE INVESTIGATION
Suite 6, Delta House, Laser Quay,
Culpeper Close, Rochester, ME2 4HU
0207 117 2492
www.brimstoneuxo.com

INTRODUCTION

The Stage 1 Preliminary Risk Assessment is an initial screening assessment designed to highlight any sources of unexploded ordnance (UXO) with the potential to contaminate a given site.

The aim of the Stage 1 assessment is to identify or discount the need for further detailed research - a Stage 2 Detailed UXO Risk Assessment.

This desktop assessment has been researched and written by a dedicated Researcher / Risk Assessor and produced in accordance with the CIRIA C681 Guidelines: 'Unexploded Ordnance, a Guide for the Construction Industry' (published in 2009).

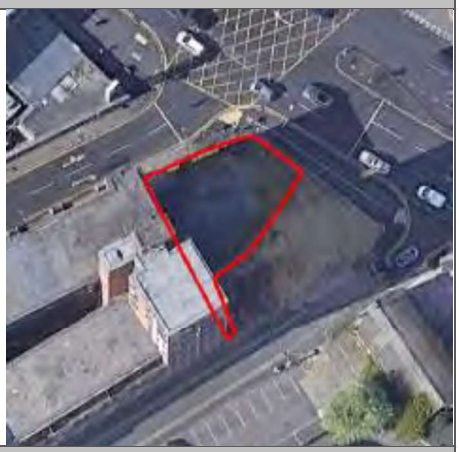

In preparation for this assessment, original wartime records, historic OS mapping and the *Brimstone UXO Sources Database* have been reviewed. The latter incorporates multiple datasets plotting the positions of a variety of domestic military sites and confirmed historic German bombing targets.

The Stage 1 Preliminary Risk Assessment considers the following:

1. The Proposed Works
2. Enemy Action during WWI and WWII
3. British / Allied Military Activity
4. Historic Site Occupancy
5. Risk Mitigating Factors

THE SITE

The Site (approximately centred on the National Grid Ref: SJ 85041 98313) is located in Manchester, approximately 450m north of Manchester Piccadilly railway station. The Site comprises a small area of hard surfaced brownfield land. The structure to the immediate west is not encompassed by the boundary.
The Site is bound to the north by Laystall Street, to the east by Great Ancoats Street, to the south by additional brownfield land and Lomax Street, and to the west by a seven-storey apartment block on Lomax Street.

THE PROPOSED WORKS

A GI is proposed, comprising one rotary borehole to approximately 40m bgl, and 4-5 dynamic sample boreholes to approximately 5m bgl.
The future development on Site will comprise a 19-storey hotel with a basement level.

ENEMY ACTION DURING WWI AND WWII

Potential Source of UXO	Significant?	Details
WWI German Bombing	×/✓	Manchester experienced at least one small scale air raid during WWI. However, there is no evidence to suggest that the Site was affected.

WWII German Bombing	✓	British District Bombing Density Statistics	The Site is located in the WWII-era County Borough of Manchester, which sustained 27 bombs / 1,000 acres, a low-to-moderate bombing density.
		Evidence of bomb strikes / damage	16 bomb strikes are recorded within an approximate 500m radius of the Site, with the closest being approximately 100m north-east. Historic aerial photography indicates numerous structures have been cleared across Lomax Street, approximately 10m south of the Site. A small area in the north of the Site also appears to have been cleared. Light-coloured roofing is visible in two of the structures on Site; this is potentially indicative of repairs due to bomb damage. Evidence has been found to suggest that planned slum clearance periodically occurred on Great Ancoats Street from 1896 onwards. This may have taken place on Site.
		Local Bombing Decoy Sites	None within a significant distance. The closest was located approximately 7.5km south-west.
		Local German Bombing Targets	Manchester Piccadilly railway station, approximately 450m south, was identified as a primary Luftwaffe target. Additional industrial infrastructure in the Site's vicinity, such as a sawmill approximately 50m north, may have been identified as targets of opportunity.
WWII German Cross Channel Artillery Shelling	×	n/a	
BRITISH / ALLIED MILITARY ACTIVITY			
Potential Source of UXO	**Significant?**	**Details**	
WWII Home Guard (HG) activity	×	Soldiers of the 50th Lancashire (Manchester) Ancoats HG Battalion will have been active locally during WWII. However, armed HG troops are highly unlikely to have accessed/utilised the Site due to its developed nature.	
Site requisitioned for wartime military use	×	n/a	
Existing or historic Army or RAF training area / weapons range	×	n/a	
Existing or historic military bases and other installations	×	n/a	
Existing or historic munitions or explosives factories	×	n/a	
Existing or historic military storage depots	×	n/a	
Existing or historic military defensive fortifications	×	n/a	
WWII light and / or heavy anti-aircraft (LAA and HAA) fire	✓	30 permanent HAA batteries were active within range of the Site during WWII. LAA guns likely defended vulnerable points within the area too. Luftwaffe activity in the region was frequent and intense. It is possible that an unexploded AA shell struck the Site and become obscured in debris.	

WWII pipe-mined locations and beach minefields	×	n/a
SITE HISTORY		
What was the Site occupancy historically, especially during WWI and WWII?	During WWII the Site comprised structures of an unknown purpose; anecdotal evidence suggests that on the corner of Laystall Street and Great Ancoats street there was a public house.	
RISK MITIGATING FACTORS		
Post-conflict ground works	By 1999 all but one of the structures on Site had been cleared. This was itself demolished in 2005 and the Site has since remained undeveloped. The clearance and grubbing out of structures likely mitigated the risk to a shallow (1-2m bgl) depth.	
Likelihood of UXO remaining	The risk associated with (any) very shallow (<1m bgl) or shallow buried UXO has likely been partially mitigated. The risk associated with (any) deep (>2m bgl) buried UXO almost certainly remains unmitigated.	

CONCLUSIONS

German UXO:

- Manchester was subject to medium and small-scale air raids during WWII. The wartime figures for the wider borough suggest a low-to-moderate bombing density. However, the Site was positioned in close proximity to the city centre target area and therefore the local bombing density was likely higher than this figure suggests.
- Consequently, 16 bomb strikes are recorded within a 500m radius of the Site, with the closest being located approximately 100m north-east.
- A small area of clearance is visible in the north of the Site footprint. Further areas of clearance are visible within the wider Site area in a comparison of pre- and post-WWII OS mapping, including directly south of the Site across Lomax Street; this may be indicative of bomb damage occurring.
- In addition, light coloured roofing is visible in two of the structures in the east of the Site; this may be indicative of repairs occurring due to bomb damage. However, no bomb strikes could be attributed to the clearance, and the structure itself remained in place until 2005, so likely sustained general blast damage at most.
- Should damage have occurred, the Site may have been cordoned off / abandoned for the remainder of the war. Any subsequent UXB strike could easily have gone unnoticed, its entry hole obscured by the wreckage.
- However, due to the precise nature of the clearance both to the south of the Site and on the Site itself, it is thought that this is instead due to planned slum clearance, which is known to have periodically occurred on Great Ancoats Street throughout the 20th century.
- Had bombs impacted in the areas of visible clearance, the damage would likely not be confined to the structures that were cleared and would have left evidence of their occurrence in neighbouring structures, such as the large factory directly west of the Site. No such evidence is visible in 1946 aerial photography, further indicating that the clearance may not be a result of bomb damage.

British / Allied UXO:

- No evidence of significant military activity specifically on Site has been found and none is likely to have occurred.
- It is possible that an unexploded British AA shell struck the Site during WWII. Whilst any such strike to surviving structures will have left incontrovertible evidence of its existence, should damage have resulted in the clearance in the south, an AA shell could have become obscured in rubble and debris and been overlooked. Any such incident could remain in situ.

RECOMMENDATION(S)	
SI Works	A Stage 2 Detailed Risk Assessment is not considered necessary prior to works commencing. However, as the cause of the clearance on Site cannot be precisely ascertained at a preliminary stage (it is thought to be a result of slum clearance), the possibility of shallow buried UXO remaining on Site cannot be completely ruled out. Therefore, a **UXO Safety Awareness Briefing** to all personnel conducting ground works would be considered prudent.
Development Works
