GROUP

An illustration depicting various environmental and industrial services. In the upper left, a factory with a tall chimney emitting smoke is shown. Below it, a large red building is being inspected by two workers in white protective suits, one on a ladder. To the right, a yellow excavator is working on a hill. In the center, a river flows past a large pipe discharging water, with a vertical scale marker nearby. In the foreground, a woman in a white hard hat and high-visibility vest holds a sample bottle, while another person in a full-body protective suit sprays vegetation. The background features a blue sky with clouds and a body of water.

1 Introduction

1.1 Background

LK Consult Ltd (LKC) has been commissioned by Archstone Properties Ltd to carry out a Phase 1 Preliminary Risk Assessment (PRA) for 58 Richmond Street, Manchester. The report was undertaken in support of a future planning application to redevelop the site for residential end use.

According to guidance set out in CLR11¹ and the National Planning Policy Framework (NPPF)², a PRA with a site reconnaissance is required as a minimum to ascertain if there is a potential contamination risk.

In accordance with current guidance, the PRA will include a site reconnaissance, site history, geology, hydrogeology, hydrology, mineral search and a landfill search. Information gathered from the desk study and site reconnaissance will be used to develop a contamination conceptual model for the site, which will support the identification and assessment of any pollutant linkages.

In addition, the information gathered will be used to identify potential geotechnical constraints associated with the redevelopment of the site.

Based on the findings of this report, an appropriate site investigation can be derived, if required.

1.2 Site Details

A summary of the site details is presented in Table 1-1. Figures 1 and 2 indicate the site location and boundary. Figure 3 indicates the proposed development.

Location	End of Richmond Street, southwest of Abingdon Street, Manchester. Centred at approximate National Grid Reference 384290E, 397800N.
Approximate Area	0.02Ha.
Topography	Approximately 49 metres Above Ordnance Datum (AOD). Site is approximately level.
Current Land Use	<u>Site</u> The site currently comprises a three storey concrete building and a small car parking area to the west of the site. <u>Surrounding Area</u> North East: Car park and commercial buildings. South East: Richmond Street and mixed residential / commercial buildings. South West: Residential properties and Abingdon Street. North West: Commercial buildings.
Proposed Development	Residential apartments. No soft landscaping is indicated in the proposed development.

Table 1-1: Summary of the site details.

2 Site History

2.1 Historical Map Review

In compiling the site history, LKC consulted historical mapping provided by the Landmark Information Group Ltd. Copies of relevant historical plans are provided in Appendix A and are summarised Table 2-1. Notable features within 100m of the site boundary have been presented (distances will be approximate). The exception to this will be potentially significant features within a 250m buffer that could be infilled historically.

Site Features	Location	Map Dates Present	Comments
Unreferenced Buildings	Whole Site	1848-1938	- Row of unreferenced buildings, likely to be residential properties. - No longer annotated by 1948 mapping, potentially demolished.
Unreferenced Building	SE	1948-present	- Annotated as '58 Richmond Street'. - First annotated on 1948 mapping, but additional information suggests that the building was constructed in 1911, replacing two residential properties and was used as textiles workshop and as an office. See section 2.2 below.
Surrounding Area Features	Distance / Location	Map Dates Present	Comments
Unreferenced Buildings	Adj. to NE	1848-1938	- Row of unreferenced buildings, likely to be residential properties. - Buildings immediately adjacent to site no longer annotated by 1948 mapping.
Canal	200m E	1848-present	- Annotated as 'Rochdale Canal'. - With associated lock annotated 40m S.
River Medlock	205m S	1848-present	- Annotated as flowing SW.
Timber Yard	90m S	1851 only	- No longer annotated by 1848 mapping.
2no. Reservoirs	85-90m NW	1851 only	- Only annotated on 1851 mapping, potentially infilled by 1848 mapping.
Eagle Foundry	100m SW	1851-1891	- Iron foundry. - No longer annotated on 1908 mapping.
2no. Wharfs	50-95m SE	1851-1891 only	- Wharf 50m SE annotated as 'Flags Wharf' on 1851 mapping and no longer annotated by 1908 mapping. - Wharf 95m SE annotated as 'Coal Wharf' and only annotated on 1851 mapping.
9no. Glass Houses	45-90m N 75m E 75-205m S 100m W 70m NW	1891-1970	- No glass houses annotated by 1972 mapping.

Table 2-1: Summary of the historical features.

Surrounding Area Features	Distance / Location	Map Dates Present	Comments
Electricity Station / Works	100m SW	1908-present	- Annotated as 'Electricity Station' between 1908-1955 mapping. - Annotated as 'Works' between 1964-1994 mapping. - Unreferenced building between 1995-2013 mapping. - Annotated as 'Electricity Sub Station' on 2018 mapping.
Station	75m N	1965-present	- Annotated as 'Omnibus Station' from 1965 mapping. - Annotated as 'Bus Station with Car Park' from 1985-1990 mapping. - Annotated as 'Coach Station' between 1994-2013 mapping. - Annotated as 'Coach Station and Multi-storey Car Park' on 2018 mapping.
2no. Car Parks	30m N 90m NW	1985-present	

Table 2-1 Continued: Summary of the historical features.

2.2 Additional Information

Additional historical information was obtained from Historic England relating to the building currently present on site.

58 Richmond Street comprises a complete reinforced-concrete warehouse that was constructed in 1911 replacing two residential properties. It was to be used as a textiles workshop with the first tenant being recorded in 1913 (a manufacturer of boot lining textiles). By 1962, the warehouse was being used as an office.

This building is listed (Grade II) under the Planning (Listed Buildings and Conservation Areas) Act 1990 as amended for its special architectural or historic interest.

3 Environmental Setting

In compiling this Section, LKC consulted environmental information provided by the Envirocheck Report (Appendix B), British Geological Survey (BGS) (Appendix C), the Coal Authority, Zetica Ltd UXO Risk Map (Appendix D), Natural England and the Environment Agency. A summary is presented in Table 3-1.

Categories ^(data sources)			Details
Geology	Artificial ¹		- None recorded onsite.
	Superficial ¹		- Made Ground recorded 33m SE of the site.
	Bedrock ^{1,2}		- Till (Devensian).
	BGS Logs ³		- Chester Formation (Sandstone). - Fault (East Manchester Fault) recorded in W of site, orientated NW-SE with a downthrow to the NE.
Hydro-geology	Aquifer Designation	- Bedrock	- Principal Aquifer.
		- Superficial	- Secondary A Aquifer.
	Source Protection Zone (SPZ) ¹		- Site is not within an SPZ.
	Groundwater Abstractions ¹		- 3 within 250m. - Nearest 106m SE: 'West Contracting'. Abstraction for other industrial/commercial/public services (non evaporative cooling).
Hydrology ¹	Nearest Surface Water		- 36m SE, Rochdale Canal.
	Water Quality Data		- 21m SE, Rochdale Canal– River Quality B.
	Flooding		- No risk from rivers or sea recorded onsite. - Risk of flooding from rivers recorded 169m S. - Limited potential for groundwater flooding. - Potential for surface water flooding.
	Surface Water Abstractions		- None recorded within 1km of site.
	Discharge Consents		- 9 within 250m. - Nearest 52m S: 'West Contracting Ltd'. Consent to discharge trade discharges (cooling water) into groundwater.
	Pollution Incidents		- 1 within 250m. - 97m E: 8th ^h November 1996, Category 3 (Minor Incident) involving the release of an unknown pollutant into an unknown receiving water.

Table 3-1: Summary of the environmental setting.

Data Sources:

1 – Envirocheck Report (Appendix B);

2 – BGS Sheet 85 1:50,000;

3 – BGS GeoIndex <http://mapapps2.bgs.ac.uk/geoindex/home.html> (Appendix C);

Categories ^(data sources)		Details
Minerals & Mining	Coal Report	- N/A.
	Coal Mining Development High Risk Area (DHRA) ⁴	- Not located within DHRA.
	Surface Extractions ¹	- No mineral extraction within 1km of the site.
	Cheshire Brine Compensation District ¹ .	- N/A.
	Mining Instability / Non-Coal Mining Area ¹	- Site is within an area that might be affected by coal mining. - Not located within a Non-Coal Mining Area.
Ground Stability (onsite) ¹	Collapsible Ground	- No hazard.
	Compressible Ground	- No hazard.
	Ground Dissolution	- No hazard.
	Landslide	- Very low hazard.
	Running Sand	- Very low hazard.
	Shrinking / Swelling Clay	- Very low hazard.
Landfill Sites ¹	Known / Registered	- None recorded with 1km of site.
	Potential	- 1 within 250m: - Wharf 50m SE, potentially infilled by 1908 mapping.
Radon ¹		- Probability of <1% of homes above Action Level. No further action required.
Designated Sites ¹		- None recorded on site. - Nitrate Vulnerable Zone 586m N.
Contemporary Trade Directory ¹		- 7 within 100m. - Nearest onsite (NE): 'W H Hammond & Co (Manchester) Ltd' – soft furnishing (manufacturers). Currently inactive.
Fuel Station Entries ¹		- None within 100m. - Nearest 522m SW: 'Ormond Street Motors'. Currently obsolete.
Unexploded Bomb Risk (UXO) ⁵		- Moderate risk. - A Zetica Pre-Desk Study Assessment concluded that a further detailed study of the site should be undertaken.

Table 3-1 Continued: Summary of the environmental setting.

4 Site Reconnaissance

A site reconnaissance was carried out on 25th July 2018. Hand dug trial holes were not undertaken as the site is covered by concrete and tarmac. The building was locked at the time of the site reconnaissance and could not be accessed.

An annotated plan with photographs is provided in Appendix E.

Relevant features identified on site are summarised below:

- The site currently comprises a three storey concrete building and a small car parking area to the south west of the site.
- Anecdotal evidence suggests the building was used as a warehouse previously.
- The site covered by hardstanding ground with no areas of soft landscaping.
- The site is approximately flat and level with the surrounding area.
- A man hole cover was noted in the centre of the site and several surface drains were noted along Richmond Street close to the site boundary.
- Access to the small car park is off Richmond Street.
- No visual or olfactory evidence of significant contamination was identified.

The surrounding area comprises:

- North East: Car park and commercial buildings.
- South East: Richmond Street and mixed residential / commercial buildings.
- South West: Residential properties and Abingdon Street.
- North West: Commercial buildings.

5 Preliminary Conceptual Model

5.1 Introduction

The aim of the conceptual model is to provide a preliminary assessment of the likelihood of a pollutant linkage for each potential combination of contaminant, pathway and receptor. A conceptual model can be used to make an informed decision on the contamination risks associated with the site and whether further site investigation work is required.

The Sections below are therefore divided into potential contaminant, potential pathway and potential receptor as described in CLR11³, on the premise that, if there is no pollutant linkage, then there will be no risk to the receptor. The final Section provides an assessment of the potential pollutant linkages that may still be present on the site if redevelopment were to occur.

5.2 Potential Contaminants

Potential contamination sources are detailed in Table 5-1.

Source	Contaminants
Onsite former buildings	- Asbestos Containing Material (ACM).
Onsite made ground (general made ground)	- Ash and clinker (e.g. from hearths and boilers, often historically used for site raising / levelling): heavy metals, sulphates and PAHs. - Other unknown inorganic / organic contaminants (dependant on fill material source). - If significant depth of organic / putrescible material: Hazardous gas (principally carbon dioxide and methane).
Onsite current building (former use as warehouse / office)	- Limited information was available pertaining to the history of building on site but possible used as a warehouse/textiles workshop. - Typical contaminants could include: ACM, heavy metals, sulphates, PAHs, solvents, lubricants and hydrocarbons.
Onsite Car Park	- Spillages / leakages: Petroleum hydrocarbons, oils (source expected to be minimal and localised)
Offsite potentially infilled ground within 250m and offsite made ground	- Hazardous gas (principally carbon dioxide and methane). - Given age, size and location of potentially infilled features, not considered to be a significant source.
Adjacent former buildings	- ACM: considered a potential source of contamination given close proximity to site.
Surrounding area (road, commercial buildings, electricity sub station, foundry, wharf, car parks, glass houses, station, timber yard)	- No significant contamination sources within influencing distance of the site and given age of features identified within 100m of site.

Table 5-1: Potential contamination sources.

5.3 Potential Receptors

Potential receptors are detailed in Table 5-2.

³ Defra (2004). "Model Procedures for the Management of Land Contamination". R&D Publication CLR 11.

Receptors	
Human Health	- Future site users (including residents, visitors and site workers). - Offsite land users.
Controlled Waters	- Principal Aquifer (bedrock) Secondary A Aquifer (superficial). - Rochdale Canal 36m SE.
Buildings and structures.	
Potable water pipes.	

Table 5-2: Potential receptors.

5.4 Potential Pathways

Potential pathways are detailed in Table 5-3.

Pathways		
Soil	Human Health ⁴ (residential land use: apartments with no soft landscaping)	- Inhalation of vapours outside. - Inhalation of vapours inside. - Omitted: ingestion of soil, ingestion of soil-derived indoor dust, dermal contact with soil, dermal contact with soil-derived indoor dust, inhalation of soil-derived outdoor dust, inhalation of soil-derived indoor dust, ingestion of contaminated vegetables and ingestion of soil attached to vegetables.
	- Windblown dust and fibres to adjacent receptors.	
	- Direct contact with receptors (building foundations, services).	
Water	- The site is hardstanding and relatively flat. Infiltration and surface run off is likely to be limited.	
	- Migration through potentially permeable strata and preferential pathways.	
	- Superficial (till) is likely to be relatively impermeable.	
	- Bedrock (sandstone) likely to be relatively permeable.	
Gas	- Preferential pathways: services.	
	- Migration through potentially permeable strata and preferential pathways.	
	- Superficial (till) is likely to be relatively impermeable.	
	- Bedrock (sandstone) likely to be relatively permeable.	
Gas	- Preferential pathways: services.	
	- Migration into buildings (e.g. via services) and accumulation of gases in confined spaces (potentially causing explosion if methane is present).	

Table 5-3: Potential pathways.

5.5 Preliminary Contamination Conceptual Model

The Preliminary Contamination Conceptual Model is illustrated in Table 5-4 and has identified seven generic potential pollutant linkages.

Each linkage is described along with an assessment of the risk based upon guidance on probabilities and consequences outlined in CIRIA C552⁵.

In order to assess the potential risk for each pollutant linkage, an assessment of the magnitude of the potential consequence (severity) of the risk occurring and the magnitude of the probability (likelihood) of the risk occurring has been considered and classified. This is based on the guidance provided in CIRIA C552 and further details including a risk matrix is provided in Appendix F.

⁴ EA (2008). "Updated Technical Background to the CLEA Model". Science Report – SC050021/SR3.

⁵ CIRIA (2001). "Contaminated Land Risk Assessment: A Guide to Good Practice". C552.

Where LKC identified a low to very low risk, limited intrusive investigation work, a watching brief (during construction work) or no investigation work will be recommended. This will be dependent on the nature of the site and the proposed development.

Where the risk falls into the moderate/low risk, LKC will undertake an assessment to establish what category the pollutant linkage will fall into (i.e. moderate or low risk will be chosen).

Where LKC identifies a moderate or higher risk, intrusive work or precautionary remedial measures will be recommended.

It should be noted that there may be risk from short term exposure from contaminated soil to site workers. The Preliminary Contamination Conceptual Model deals with long term exposure to key receptors. Acute risks can be easily mitigated by good environmental management of the site during site works. Standard health and safety precautions (as per HSE guidance⁶) should be adopted by all workers involved with site enabling and construction works. Therefore, this receptor is not considered in the contamination conceptual model.

⁶ HSE (1991). "Protection of Workers and the General Public During Development of Contaminated Land". London HMSO.

Pollutant Linkage	Pathway	Receptor	Contaminant (source)	Probability	Consequence	Risk	Assessment & Recommendations
PL1	- Dermal contact. - Inhalation of soil, fibres and dust. - Ingestion of soils, dust, - Windblown dust.	- Future site users. - Offsite receptors.	- ACM, heavy metals, PAHs, hydrocarbons, other inorganic and organic contaminants (made ground, former buildings, former warehouse/workshop car park).		N/A		- No viable pathways anticipated as the proposed development comprises no soft landscaping. - No pollutant linkage therefore no further assessment required.
PL2	- Inhalation of vapours. - Migration through permeable strata and preferential pathways.	- Future site users. - Offsite receptors.	- Volatile contaminants such as hydrocarbons, solvents, antifreeze (made ground, former warehouse/workshop, car park).	Low Likelihood	Medium	Moderate / Low	- Low likelihood given limited potential sources of volatile contamination identified. Therefore, significant spillages / leakages of volatile contaminants not anticipated. Underlying superficial deposits may inhibit migration of volatile contaminants - Moderate risk assumed due to sensitive nature of development (residential). - Recommendation: No testing required unless significant evidence of volatile contaminants identified in the ground.
PL3	- Inhalation of gas. - Migration through permeable strata and preferential pathways. - Explosion in confined spaces.	- Future site users. - Buildings. - Offsite land users.	- Hazardous Gas: - Methane, carbon dioxide (potentially infilled features 250m of the site, made ground 33m SE of site).	Unlikely	Severe	Moderate / Low	- Unlikely probability given no significant viable source of hazardous gas identified within 250m of site. Underlying superficial deposits may limit migration of hazardous gas - Moderate risk assumed due to sensitive nature of development (residential). - Recommendation: Gas monitoring required if significant thickness of made ground identified below site.
PL4	- Surface run-off. - Migration through permeable strata and preferential pathways. - Perched waters migration.	- Groundwater (Principal Bedrock Aquifer and Secondary A Superficial Aquifer) - Surface Water (Rochdale Canal)	- Mobile contaminants such as metals, PAHs, hydrocarbons, volatile compounds (made ground, former warehouse/workshop, car park).	Low Likelihood	Medium	Moderate / Low	- Low likelihood due to potential viable source of mobile contaminants identified on site and the unknown composition of any made ground onsite. Underlying superficial deposits may inhibit migration of mobile contaminants. Site is covered by hardstanding ground in good condition therefore infiltration will be limited. - Moderate risk assumed due to sensitive nature of development (residential). - Recommendation: No testing required unless evidence of significant potentially mobile contamination is identified in the soil.
PL5	- Sulphate attack on concrete.	- Building structure.	- Sulphate (ash potentially in made ground).	High likelihood	Mild	Moderate / Low	- High likelihood as ash potentially in made ground, given site history, which may be in contact with concrete used in future buildings. - Moderate risk assumed at this stage due to unknown shallow ground conditions. - Recommendation: Intrusive investigation required as part of PL1.

Table 5-4: Preliminary Contamination Conceptual Model.

Pollutant Linkage	Pathway	Receptor	Contaminant (source)	Probability	Consequence	Risk	Assessment & Recommendations
PL6	- Ingestion of tainted water supply.	- Future site users. - Water pipes.	- Organic contaminants such as hydrocarbons, solvents (made ground, former warehouse/workshop, car park)	High Likelihood	Medium	Moderate	- High likelihood at this stage as made ground of unknown composition potentially present at pipeline depth (0.75-1.35m). - Recommendation: Sampling required if made ground present at pipeline installation depths. UU Risk Assessment likely required.
PL7	-Direct Contact (plant uptake).	-Flora.	-Phytotoxic Contaminants (made ground).	N/A			- No viable pathways anticipated as the proposed development comprises no soft landscaping. -No pollutant linkage therefore no further assessment required.

Table 5-4 Continued: Preliminary Contamination Conceptual Model.

6 Preliminary Geotechnical Risk Assessment

Bedrock geology is mapped as sandstone (Chester Formation) overlain by superficial Till deposits. Given the history of the site, significant made ground may be present from former infilled basements.

The Envirocheck Report identified a very low hazard of landslides, ground dissolution and shrinking / swelling clay and no hazard of collapsible ground, compressible ground and ground dissolution.

The following need to be considered and investigated before any construction work commences:

- Deep made ground and / or relic in-ground structures (from former buildings) may be present on site which could affect groundworks (e.g. grubbing out of structures) and type of foundations required (e.g. deepening of foundations / piling).
- The strength and variability of superficial deposits need to be confirmed. An allowable bearing pressure of the soils should be confirmed to allow the design of suitable foundations.
- The depth to a suitable bearing strata e.g bedrock as piling is likely to be the most feasible foundation option.
- The depth of groundwater and variability of the water table should be confirmed as shallow / fluctuating groundwater can affect the strength of the soil, particularly in granular ground.
- Sulphate content of the made ground and natural ground should be confirmed to assess the concrete requirements.

7 Summary Conclusions and Recommendations

7.1 Summary Conclusions

The proposed development is for the construction of residential apartments.

A row of presumed residential properties were identified on site from the mid-1800s until the early 1900s. Historical mapping suggests that the properties were demolished in the late 1930s and a large building was developed on site by the late 1940s. Additional sources of information indicated that the building has been present on site since 1911 and was used as warehouse and offices previously.

The surrounding area has been mainly developed for mixed residential and commercial uses.

The site is currently occupied by a three storey concrete building, which appears to be disused. A small car parking area is present to the southwest of the building. No areas of soft landscaping are present on site.

Potential contamination sources affecting the site were identified as heavy metals, PAHs, sulphate, asbestos, hydrocarbons and gas (carbon dioxide and methane).

These contaminants may pose a risk to site users (via inhalation pathways and explosion), controlled waters (via migration through permeable strata and preferential pathways), buildings and structures (direct contact and explosion) and water pipes (direct contact).

A contamination conceptual model has been produced by LKC. This has identified the following risks summarised in Table 7-1.

Pollutant Linkage		Risk	Recommendations
1	Contaminants posing a risk to future site users via dermal contact, ingestion and inhalation (of soil, dust, fibres and vegetables).	N/A	No viable pathway to receptor therefore no further assessment required.
2	Volatile contaminants posing a risk to future site users via the inhalation of vapours.	Moderate / Low	Investigation work not required unless evidence of hydrocarbons / volatile contamination identified.
3	Gas posing a risk to buildings and future site users via the migration of gas into building causing explosion and asphyxiation.	Moderate / Low	Gas monitoring required if significant thickness of made ground identified.
4	Mobile contamination posing a risk to controlled waters via the migration through permeable strata.	Moderate / Low	Investigation work not required unless evidence of significant mobile contamination identified.
5	Sulphate posing a risk to building via direct contact (sulphate attack).	Moderate / Low	Investigation work required to include soil sampling.

Table 7-1: Summary risk table.

Pollutant Linkage		Risk	Recommendations
6	Organic contaminants posing a risk to water pipes.	Moderate	Sampling required if made ground present at pipeline depths. UU Risk Assessment likely required.
7	Phytotoxic metals posing a risk to flora via root uptake.	N/A	No viable pathway to receptor therefore no further assessment required.

Table 7-1 Continued: Summary risk table.

The preliminary geotechnical assessment has also identified the following potential risk which will need to be investigated:

- Possible deep made ground with in-ground structures.
- Unknown strength of superficial deposits for foundation design.
- Depth to bedrock or a suitable bearing strata for pile design.
- Depth and variability of the water table.
- Unknown sulphate content of natural and made ground onsite.

Further work is recommended, which is detailed in the following Section.

7.2 Recommendations

7.2.1 General

In accordance with NPPF, LKC consider that sufficient information on the potential contaminative status of the site is available in this Preliminary Risk Assessment report to allow the validation of any future planning application by the Local Planning Authority and for conditional planning approval to be granted.

A copy of this report should be sent as part of the planning application.

7.2.2 Watching Brief

Based upon the available information LKC consider it unnecessary at this stage to undertake an extensive contamination investigation. However, a minimum of a watching brief should be maintained during site clearance and development works for any likely contaminative made ground, such as ash and clinker; any unusual ground conditions and any visual and / or olfactory evidence of hydrocarbon contamination. The watching brief should be carried out by a suitably qualified person.

If evidence of made ground and/or visual and olfactory evidence of contaminants are identified, then near surface sampling will likely be required to characterise the material and recommendations for appropriate remediation undertaken, if required. Samples should be collected in sufficient quantity and analysed for a suitable suite of determinands to demonstrably characterise the site.

Should any significant thickness of made ground be encountered during the site works, LKC would recommend that this information is reported to the Local Authority and to LKC for further assessment.

7.3 Further Considerations

7.3.1 Asbestos

Even though no asbestos was identified externally on the existing buildings there may be areas inside that have Asbestos Containing Materials (ACMs) given the age of the

property. Therefore, we would advise that a Pre-Demolition and Major Refurbishment Asbestos Survey is undertaken prior to demolition by a professional contractor.

The LK Group have a designated Asbestos Department would be happy to advise you on the appropriate steps to take in order to have the building suitably surveyed.

Lancashire And Furness

Published 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1886 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1975 - 1976

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data Published 1996

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Source map scale - 1:1,056

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a skeleton survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1845 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys, although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

LK GROUP
Lancashire And Furness
Published 1891
Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to complement the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

LK GROUP
Lancashire And Furness
Published 1848

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,000 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,000 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

LK GROUP
VectorMap Local
Published 2018

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

JOB NUMBER BOL0818

BOREHOLE No. 1 of 10

CREW A

SITE Canal Street, Manchester

DATE DRILLED 13/08/90

GROUND LVL (if recorded)

Description	Depth	Leg	Sample/Test
40mm TARMAC 150mm GRANITE SET 180mm CONCRETE	0.37		
Brown CLAY FILL with occ. brick ash and cinder fragments.			
Brown CLAY FILL? with occ. gravel and coal fragments.	1.50		
Very stiff brown CLAY with occ. gravel and black coal shale.	2.10		
			2.9 SV 150+Kn/m ²
Brown CLAY FILL with brick, gravel, a slight oily odour.	4.50		
End of hole.	5.80		

Comments: Sewer suspected at 4.5m after striking brick.
Tried to top up hole with water without success.
Hole dry.

Appendix D

Zetica UXO Unexploded Bomb Risk Map

Pre-Desk Study Assessment

Site:	58 Richmond Street, Manchester
Client:	The LK Group
Contact:	Hannah Moss
Date:	18 th July 2018
Pre-WWI Military Activity on or Affecting the Site	None identified.
WWI Military Activity on or Affecting the Site	None identified.
WWI Strategic Targets (within 5km of Site)	The following strategic targets were located in the vicinity of the Site: ■ Industries important to the war effort, including engineering and locomotive works and munitions factories. ■ Transport infrastructure and public utilities. ■ Military barracks and airfields. ■ Anti-Aircraft (AA) guns.
WWI Bombing	None identified on the Site.
Interwar Military Activity on or Affecting the Site	None identified.
WWII Military Activity on or Affecting the Site	None identified.
WWII Strategic Targets (within 5km of Site)	The following strategic targets were located in the vicinity of the Site: ■ Industries important to the war effort, including engineering and locomotive works and munitions factories. ■ Transport infrastructure and public utilities. ■ Military barracks. ■ AA and anti-invasion defences.
WWII Bombing Decoys (within 5km of Site)	None.
WWII Bombing	During WWII the Site was located in the County Borough (CB) of Manchester, which officially recorded 737No. High Explosive (HE) bombs with a bombing density of 27 bombs per 405 hectares (ha). The Manchester area was heavily bombed between the 22nd and 24th December 1940 (the 'Manchester Blitz'). Over 400No. HE bombs and more than 30,000 Incendiary Bombs (IBs) fell across the region. Readily available records indicate that several HE bombs fell in close proximity to the Site, extensively damaging buildings adjacent to the Site.
Post-WWII Military Activity on or Affecting the Site	None identified.
Recommendation	It is recommended that a detailed desk study is commissioned to assess, and potentially zone, the Unexploded Ordnance (UXO) hazard level on the Site.

This summary is based on a cursory review of readily available records. Caution is advised if you plan to action work based on this summary. It should be noted that where a potentially significant source of UXO hazard has been identified on the Site, the requirement for a detailed desk study and risk assessment has been confirmed and no further research will be undertaken at this stage. It is possible that further in-depth research as part of a detailed UXO desk study and risk assessment may identify other potential sources of UXO hazard on the Site.

Appendix F

Risk Matrix

Risk Evaluation

The method for risk evaluation is a qualitative method of interpreting the output from the risk estimation stage of the assessment, based on CIRIA 552⁷. It involves the classification of the:

- Magnitude of the potential consequence (severity) of the risk occurring (Table A).
- Magnitude of the probability (likelihood) of the risk occurring (Table B).

Consequence (Severity)		
Classification	Definition	Example
Severe	- Short term (acute) risk to human health likely to result in 'significant harm' as defined by the Environment Protection Act 1990, Part IIA. - Short term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource. - Catastrophic damage to buildings/properties. - A short term risk to a particular ecosystem, or organism forming part of such ecosystem (note: the definition of ecological systems within the Draft Circular on Contaminated Land, DETR, 2000).	- High concentrations of cyanide on the surface of an informal recreation area. - Major spillage of contaminants from site into controlled waters. - Explosion, causing building collapse (can also equate to short term human health risk if buildings are occupied).
Medium	- Chronic damage to Human Health ('significant harm' as defined in DETR, 2000). - Pollution of sensitive water resources (note Water Resources Act contains no scope for considering significance of pollution). - A significant change in a particular ecosystem, or organism forming part of such ecosystem.	- Concentrations of a contaminant from site exceed generic, or site specific assessment criteria. - Leaching of contaminants from a site to a major or minor aquifer (Principal and Secondary). - Death of a species within a designated nature reserve.
Mild	- Pollution of non-sensitive water resources. - Significant damage to crops, buildings, structures and services ('significant harm' as defined in DETR, 2000). - Damage to sensitive buildings / structures / services or the environment.	- Pollution of non-classified groundwater. - Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability).
Minor	- Harm, although not necessarily significant harm, which may result in a financial loss, or expenditure to resolve. - Non-permanent health effects to human health (easily prevented by means such as personal protective clothing etc.). - Easily repairable damage to buildings, structures and services.	- The presence of contaminants at such concentrations that protective equipment is required during site works. - The loss of plants in a landscaping scheme. - Discoloration of concrete.

Table A: Classification of consequence.

Probability (Likelihood)	
Classification	Definition
High likelihood	- There is a pollutant linkage and an event that either appears very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	- There is a pollutant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. - Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.
Low likelihood	- There is a pollutant linkage and circumstances are possible under which an event could occur. - However it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	- There is a pollutant linkage but circumstances are such that it is improbable that an event would occur in the very long term.

Table B: Classification of probability.

⁷ CIRIA (2001). "Contaminated Land Risk Assessment: A Guide to Good Practice". C552.

These classifications are then compared to indicate the risk presented by each pollutant linkage (Table C). It is important that this classification is only applied where there is a possibility (which can range from high likelihood to unlikely) of a pollutant linkage existing.

		Consequence			
		Severe	Medium	Mild	Minor
Probability	High likelihood	Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk
	Likely	High Risk	Moderate Risk	Moderate / Low Risk	Low Risk
	Low likelihood	Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate / Low Risk	Low Risk	Very Low Risk	Very Low Risk

Table C: Comparison of consequence against probability.

Once the risk has been determined the corresponding action can be assessed (Table D).

Risk	Action Required
Very High Risk	- There is a high probability that severe harm could arise to a designated receptor from an identified hazard, OR, there is evidence that severe harm to a designated receptor is currently happening. - This risk, if realised, is likely to result in a substantial liability. - Urgent investigation (if not already undertaken) and remediation are likely to be required.
High Risk	- Harm is likely to arise to a designated receptor from an identified hazard. - Realisation of the risk is likely to present a substantial liability. - Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short term and are likely over the longer term.
Moderate Risk	- It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. - Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term.
Low Risk	- It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very Low Risk	- There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.

Table D: Description of the classification and likely action required.

Where LKC identified a low to very low risk either limited intrusive investigation work, a watching brief (during construction work) or no investigation work will be recommended. This will be dependent on the nature of the site and the proposed development.

Where the risk falls into the moderate/low risk, LKC will undertake an assessment to establish what category the pollutant linkage will fall into (i.e. moderate or low risk will be chosen).

Where LKC identifies a moderate or higher risk intrusive work or precautionary remedial measures will be recommended.
