Executive Summary

Appointment	In January 2021 Curtins were instructed by Embassy to undertake a Phase 1 Preliminary Risk Assessment of land under Castlefield Arches off Dawson Street, Manchester, M15 4NU. The site is centred on NGR SJ 82746 97482 and covers an area of approximately 0.64 Ha. It is understood that the proposed site development is for new permanent accommodation with facilities.
Current Site Status	The site is located under and adjacent to masonry railway arches with a railway overhead. The site is bound by the Bridgewater canal at the south and River Irwell at the north. Some of the arches on the east of site are infilled with commercial units the remainder of the arches are open and vacant. The site is accessed off Edgerton Street at the east of site, the access road slopes moderately towards the west on to site, the topography is then relatively level with the surface covered by hardstanding.
Site History	Earliest mapping (1848) shows that the site was undeveloped land with the River Irwell present to the northwest boundary. The site was developed by 1896 and was occupied by railway masonry arches with surrounding residential and commercial development. The site remains as railway arches to present day. The warehouse which was located 10m north of the site seems to have been partly destroyed by 1950 and is then recorded as flats and offices by 2006 to present day. Throughout the site's history, its surroundings are generally occupied by commercial development and some residential properties with some contaminative potential.
Geology	BGS mapping indicates the site is underlain by Chester Formation bedrock. There are no BGS records for the superficial deposits. The BGS records four boreholes onsite with two available. One located within the northeast corner advanced to a depth of 10.00m bgl with bedrock encountered from 8.20m bgl. Another in the southeast corner advanced to 17.66m bgl with bedrock encountered from 6.40m bgl. The site is located in a low probability radon area where <1% of homes are estimated to be at or above the radon Action Level.
Hydrogeology	The site is underlain by a Principal Aquifer associated with the bedrock formation. The BGS records does not have any records for the aquifer within the superficial deposits. The site is not located within a Source Protection Zone (SPZ). There are no potable groundwater abstraction point located within 1km of the site.
Hydrology	The nearest surface water feature is the River Irwell and the Bridgewater Canal located adjacent to the north, south and western boundaries of the site. There is one surface water abstraction point located 135m west. There are 24 discharge consents within 250m of the site the nearest recorded 11m northeast. 10 pollution incidents have been recorded within 250m of the site, the nearest recorded 54m southwest.
Unexploded Ordnance Risk	The risk from UXO associated with WWII bombing to construction workers is considered to be Moderate to High.
Initial Ground Contamination Assessment	The risk from Made Ground posed to the site's end-users and groundwater is considered to be Moderate due to Made Ground being recorded in close proximity to the site and the sites current use. The risk posed to surface water is considered to be Moderate/Low due to the site's proximity to the nearest surface water feature and expected Made Ground present. The risk posed to site end-users from ground generating gases arising from organic / putrescible soils and infilled land (non-water) near the site is considered to be Moderate.
Recommendations	The following recommendations are made with regards to further works at the site: 1. Obtain a Detailed UXO Risk Assessment Report prior to any intrusive works being undertaken at the site; 2. Undertake an intrusive ground investigation; 3. Undertake a GQRA as part of the ground investigation; and 4. Undertake Ground Gas Monitoring over a period of two-three months for methane, carbon dioxide, oxygen, hydrogen sulphide, gas flow in l/hr, weather conditions and barometric pressure (with confirmation if falling, steady or rising). It is further recommended that this work is completed in advance of any development works taking place.

1.0 Introduction

1.1 Project Background

In January 2021 Curtins were instructed by Embassy to undertake a Phase 1 Preliminary Risk Assessment of land under Castlefield Arches located off Dawson Street, Manchester, M15 4NU.

The location and extent of the site is shown in *Figure 2.1* on the following page. It is understood that the proposed site development is for new permanent accommodation with facilities. A proposed site plan is included in *Appendix A*.

1.2 Scope of Services

The Phase 1 PRA is intended to provide an overview of the geo-environmental and geotechnical setting of the site, prior to the proposed development of the site.

Proposed development drawings for the site are included in *Appendix A*.

Through this overview, the Phase 1 PRA aims to develop both a working conceptual and ground model for the site, as well as present an initial assessment of any risks that could be presented to the development including its intended end users and the wider environment.

Specifically, the Phase 1 PRA provides an initial assessment of the site regarding:

- a) Potential on and offsite contamination from historical and/or current uses, including potential ground gas generating sources;
- b) The potential impact on the wider environment by historical and or current use of the site of interest;
- c) The potential impact from surrounding land uses and other environmental factors;
- d) Potential problems associated with geological features such as faulting, mineral extraction, mining and land instability; and
- e) The location of apparent sub-surface structures that may affect the proposed redevelopment.

Consideration of detailed flood risk, ecology and archaeological issues are outside of the scope of this report.

2.0 Current Site and Surrounding Area Details

2.1 Site Location and Current Details

Site use, location and description are shown below in *Table 2.1* and *Figure 2.1*.

Table 2.1 – Site Details

Site Address	Dawson Street, Manchester, M15 4NU
NGR	SJ 82746 97482
Area of Site	Approximately 0.64 Ha
Current Site Use and Description	The site is located under and adjacent to masonry railway arches with a railway overhead. The site is bound by the Bridgewater Canal at the south and the River Medlock to the north. Some of the arches on the east of site are infilled with commercial units, the remainder of the arches are open and vacant. The site is accessed off Edgerton Street at the east of site, the access road slopes moderately towards the west on to site, the topography is then relatively level with the surface covered by hardstanding.

Figure 2.1 – Site Location Plan (site boundary shown in pink and 250m buffer in purple).

2.2 Surrounding Area Details

The following information was established through undertaking an environmental database search (Envirocheck report (Ref. 1) included in *Appendix B*).

Table 2.2 – Surrounding Land Uses

Surrounding Area	N	The River Medlock with flats and office buildings with car parking, the River Irwell beyond,
	E	Dawson Street / A635 Manchester ring road
	W	Railway arches, canal locks and the River Irwell
	S	Bridgewater Canal and Hulme Lock Basin with commercial buildings beyond

3.0 Site History

A review of the available historical mapping and other information for the site, as presented within the Envirocheck Report (Ref. 1), has been undertaken and is presented in *Table 3.0* below.

Table 3.0 – Previous Site and Surrounding Area Uses and Potential Sources of Contamination. *Bold text refers to on-site activity.*

Date	Description	Potential Sources of Contamination
1848	The earliest available mapping (1848) shows the site as undeveloped land. The River Irwell is present to the northwest of the site and the River Medlock along the site's northern boundary. There are residential dwellings, a church and other commercial buildings noted within 250m of the site along with vacant parcels of land.	• Potential for uncontrolled deposition of Made Ground during surrounding construction.
1896 - 1949	By 1896 the site has been developed and is part of a railway line masonry arches which encompasses the whole of the site. The surrounding site has undergone vast commercial and residential development. Commercial units recorded within close proximity of the site include; a warehouse, Iron works, Mills (Worsley, Hulme Corn, Cotton and Canal Flour Mills) with associated chimneys. A basin and Hulme Lane Locks are recorded less than 30m from the south of the site.	• Potential for uncontrolled deposition of Made Ground during on-site and surrounding construction. • Potential contamination from railway infrastructure buildings and construction of masonry arches for railway lines.
1950 – 1999	The site remains as arches under railway lines now noted as a Wharf. The 1950 map records only part of the warehouse to the north and potential damage to residential and commercial buildings 150-250m south noted as black spaces on the map. By 1985 the mills are no longer recorded and by 1999 a bus depot is located 30m southwest of the site.	• Potential for UXO with buildings in close proximity noting damage.
2006 – Present	No significant changes have occurred on-site to present day. The warehouse to the north is now used as flats and offices. The A57(M) road to the east of the site has been expanded.	• Potential for uncontrolled deposition of Made Ground during surrounding construction and demolition works.

Potential sources of onsite contamination are further discussed in *Section 6.0*.

4.0 Geology, Hydrogeology and Hydrology

4.1 Geology and Hydrogeology

A study of the Envirocheck (Ref. 1) Report and the British Geological Survey (BGS) 1:50,000 mapping records (Bedrock and Superficial Editions) for Manchester (Sheet 085) (Ref. 2) indicates the following geological and hydrogeological succession underlying the site:

Table 4.1 – Geological/Hydrogeological Succession

Geology	Associated Hydrogeological Classification
BGS Records do not indicate the presence of Made Ground on site, however the site's historical and current use as Railway arches suggests that there is potential for Made Ground deposits. BGS Records indicate Made Ground deposits present less than 10m from the western boundary.	N/A
No superficial deposits recorded	No Data Available
Chester Formation ¹	Principal Aquifer ²

Notes:

1. The formation comprises conglomerates and reddish brown, cross-bedded, pebbly sandstones with subordinate beds of red-brown mudstone. The conglomerates have a reddish-brown sandy matrix and consist mainly of pebbles of brown or purple quartzite. Gravel is composed of well-rounded pebbles, cobbles and boulders in a coarse to fine granulestone and silty sandstone matrix.
2. These are layers of rock or drift deposits that have high intergranular and/or fracture permeability – meaning they usually provide a high level of water storage. They may support water supply and/or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifers.

There are 4 BGS recorded boreholes located onsite (Ref. 3). However only two of these boreholes are available and details are presented within *Table 4.2* below:

Table 4.2 – BGS Borehole Records

Record Reference	Location (NGR)	Details (bottom to top of strata/details/thickness of strata)	
SJ89NW1299	Southeast corner (382780, 397490)	0.00m to 0.15m bgl	Made Ground: Topsoil and ash (0.15m)
		0.15m to 2.10m bgl	Loose brown medium grained SAND and GRAVEL (1.95m)
		2.10m to 3.00m bgl	Loose clayey silty SAND with gravel (0.90m)
		3.00m to 4.10m bgl	Soft grey brown clayey SILT (1.10m)
		4.10m to 5.30m bgl	Soft to firm brown silty slightly peaty CLAY (1.20m)
		5.30m to 6.30m bgl	Medium dense silty fine-grained SAND (1.00m)
		6.30m to 6.40m bgl	Medium dense brown fine to coarse SAND and GRAVEL (0.10m)
		6.40m to 8.40m bgl	Reddish brown medium grained highly weathered SANDSTONE (2.00m)
		8.40m to 17.66m bgl	Reddish brown medium grained moderately weathered SANDSTONE with pieces of mudstone (0.61m)
		2.40m bgl	Water level encountered
		17.66m bgl	Borehole terminated

Record Reference	Location (NGR)	Details (bottom to top of strata/details/thickness of strata)	
SJ89NW1297	Northeast corner (382770, 397520)	0.00m to 0.30m bgl	Made Ground (bricks and ash) (0.30m)
		0.30m to 0.40m bgl	Made Ground (bricks and clay) (0.10m)
		0.40m to 3.20m bgl	Made Ground (clay, brick and ash fill) (2.80m)
		3.20m to 3.80m bgl	Made Ground (sandy clay with brick fragments) (0.60m)
		3.80m to 4.00m bgl	Made Ground (very sandy clay) (0.20m)
		4.00m to 5.70m bgl	Made Ground (bricks and ash) (1.70m)
		5.70m to 6.20m bgl	Made Ground (oily ash and sandstone) (0.50m)
		6.20m to 7.50m bgl	Made Ground (iron foundry furnace slag) (1.30m)
		7.50m to 8.10m bgl	Made Ground (sand and brick fragments) (0.60m)
		8.10m to 8.20m bgl	Medium dense reddish brown medium grained SAND (0.10m)
		8.20m to 10.00m bgl	Brown fine to medium grained highly weathered SANDSTONE (1.80m)
		5.70m	Water level encountered
		10.00m	Borehole terminated

There are no BGS recorded faults on or within 500m of the site.

The site is not situated within a Source Protection Zone (SPZ). There are no groundwater abstraction points within 650m from the site.

4.1.1 Mining

A review of the Coal Authority interactive mapping (Ref. 4) for the area indicates that the site is located within a coal mining reporting area however is not within a high-risk area and the nearest coal mining features (shafts, outcrops, etc) are located over 2km northwest. Therefore, the risk to development from historic coal mining is considered to be **Low** and has not been considered further.

There are no recorded BGS mineral sites within 900m of the site.

4.1.2 Other Ground Stability Issues

The Envirocheck Report (Ref. 1) confirms that there is a no hazard to very low risk from the following ground stability hazards on the site; collapsible ground, compressible ground, ground dissolution, landslide ground, running sands and shrinking or swelling clay.

4.1.3 Ground Gas

There are no recorded landfill or historic landfill sites within 350m of the site. The Envirocheck Report (Ref. 1) reports Local Authority Landfill Coverage onsite, landfill data has been passed onto the relevant environmental agency.

The Envirocheck report (Ref. 1) identifies one potentially infilled land (non-water) located 126m east of the site dated 1994.

The Envirocheck report (Ref. 1) and UK Maps of Radon (Ref. 5) confirm the site is situated in a lower probability radon area where <1% of homes are above the radon action level. On this basis radon protection measures are not considered necessary in the construction of new dwellings or extensions.

Where the new development incorporates a basement the advice of a specialist Radon assessor must be obtained.

4.2 Hydrology

The nearest surface water feature is the River Irwell, located along the northern and western boundaries of the site. The river quality for this river is Grade E. The Bridgewater Canal is along the southern boundary of the site.

There are 10 pollution incidents to controlled waters recorded within 250m of the site. The closest recorded 54m southwest which recorded chemicals (detergents/surfactant) entering the Manchester Ship Canal dated February 1996. Incident severity was category 3, a minor incident.

There is one surface water abstraction within 500m of the site located 136m west of the site. This abstraction point is operated by Computer Design Systems Ltd for industrial/commercial/public services: General Cooling.

There are 24 active discharge consents recorded within 250m of the site. The nearest within the last 25 years is recorded 11m northeast for public sewage: storm sewage overflow. This is dated March 2018 with the receiving water being the River Medlock.

5.0 Unexploded Ordnance Risk Assessment

Military activities including those conducted as part of both the First and Second World Wars have resulted in a legacy of unexploded ordnance (UXO) being present within the shallow soils of the UK.

UXO result from various sources including both allied (military training) and German (bombing raids) with a guide figure of approximately 10% of all munitions failing to function as designed.

The likelihood of UXO being encountered on a development site is influenced by several factors including; the proximity to strategic targets, the nature of the development works being undertaken and evidence of local damage in the post-war periods amongst others. To determine the likelihood of UXO being present on a site, a step-wise risk assessment process is followed. This process is outlined within CIRIA C681 Unexploded Ordnance: A Guide for the Construction Industry (Ref. 6) with the following commentary considered to represent a Preliminary Risk Assessment intended to guide if and where there is a requirement for a Detailed Risk Assessment.

5.1 Preliminary UXO Assessment

Risk mapping (Ref. 7) for UXO's has placed the site in a **Moderate** risk area. Moderate-risk regions are those that show a bomb density of between 11 and 50 bombs per 1000 acres and that may contain potential WWII targets. Action to mitigate the risk is considered essential, albeit more likely that a reduced scope of work is required compared with that needed for high-risk regions.

A review of the available historic mapping identified the warehouse 10m north of the site on the 1938 map but blank spaces on the 1950 map. This could be evidence of bomb damage and the nearest is located being the warehouse. The risk mapping indicates that there are UXO finds approximately 550m north of the site.

Analysis of historical bomb mapping from the University of Manchester (*Figure 5.1*) shows evidence of bomb damage within the east section onsite and 15m north from the site. A high explosive bomb (blue circle) had hit the site dated December 1940 (Ref. 8). Within close proximity, the warehouse located 15m north of the site has evidence a high explosive bomb (blue circle) had hit the site dated December 1940. There is evidence of bombing ruins (red shading) where the warehouse is located and damage the warehouse (dashed red shading) dated December 1940.

Figure 5.1: Site boundary shown in red.

Considering the above, and lack of development since the railway masonry arches, the risk of encountering potential UXO as part of future intrusive works is considered **Moderate to High**. As such the procurement of a Detailed UXO Risk Assessment Report should be obtained.

If unexploded ordnance is discovered during any works, stop immediately, prevent access to the area, and inform the police. If the site boundary or location changes then the UXO risk should be reassessed.

6.0 Conceptual Site Model & Qualitative Risk Assessment

The conceptual site model (CSM) and Qualitative Risk Assessment (QRA) are presented in the table within this section.

The CSM details the source-pathway-receptor linkages or potential pollutant linkages (PPL) that have been identified for the site. The QRA details the associated level of risk relating to these potential pollutant linkages.

The CSM and QRA concern risk to human health and water environment with additional, more specific risk assessment protocols contained within the main body of this reporting, as detailed in *Section 6.1* below.

The QRA follows the framework outlined within CIRIA C552 (Ref. 9) which is summarised within *Appendix C*.

The 'risk rating' within the QRA refers to the risk that the source, pathway, receptor linkage or PPL is complete. Unless specifically stated it does not necessarily refer to an immediate risk and is intended to be used as a tool to assess the necessity for further assessment/investigation.

6.1 Additional Risk Assessments

The following risk assessments, listed below, are not included within the main CSM and QRA but nonetheless can be of critical importance to the onward development of the site:

- The risk presented by Mining is discussed and assessed in *Section 4.1.1*.
- The risk presented by Radon is discussed and assessed in *Section 4.1.3*.
- The risk presented by Unexploded Ordnance is discussed and assessed in *Section 5.0*.

Under current health and safety legislation, employers are required to carry out their own appropriate risk assessments and mitigation to protect themselves and their employees, other human receptors and the environment from potential contamination. Such risks must be adequately mitigated by law, specifically the Construction Design Management (CDM) Regulations, 2015 (Ref. 10) which require that potential risks to human health and the environment from construction activities are appropriately identified and all necessary steps taken to eliminate / manage that risk. It has been assumed that any future construction works on site will be undertaken in compliance with these requirements.

Qualitative Risk Assessment
Generic Quantitative Risk Assessment
Detailed Quantitative Risk Assessment or; Remedial Action

- The table below represents the first stage in the land quality risk assessment process: The Qualitative Risk Assessment.
- For a development site to be deemed 'suitable for use', the level of risk needs to be brought down to acceptable levels, i.e. low to very low risk. The purpose of each stage of risk assessment is ultimately to establish, if there is a requirement for additional levels of assessment to be made to have sufficient confidence to support a risk characterisation or management decision, e.g. remedial action.
- In the absence of specific site data, a Generic Quantitative Risk Assessment is invariably recommended.

Conceptual Site Model			Qualitative Risk Assessment			Recommended Actions
Source	Pathway(s)	Receptor(s)	Consequence	Likelihood of Occurrence	Risk Rating	
Significant sources of on-site contamination: - Made Ground of unknown composition from uncontrolled deposition of materials onsite during the construction. Significant sources of off-site contamination: - Uncontrolled deposition of Made Ground during the construction of roads and structures and demolition near and adjacent to the site's boundaries. - Made Ground recorded from BGS maps adjacent to the western boundary.	Direct contact, ingestion, inhalation (dust and vapours)	End-user of site (Residential) & Construction Workers	Medium Chronic health risk	Likely Based on the site's development history and boreholes onsite recording presences of Made Ground, the likelihood of encountering significant contamination within the Made Ground is considered to be Likely in areas of soft landscaping. Areas of building footprint and hard standing will break the source-pathway-receptor across the majority of the site Likelihood of construction workers coming into contact with contamination on site can reduced by appropriate PPE.	Moderate	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.
	Vertical migration through the superficial deposits (soils) May occur due to existing service corridors and physical processes including; capillary action and downwards into the natural deposits through infiltration.	Controlled Waters (Groundwater) Principal Aquifer (Bedrock), no data is recorded for the superficial deposits or superficial aquifer. No potable groundwater abstraction points within 1km of the site. Not located within a Source Protection Zone.	Medium Pollution of sensitive water resources	Low Likelihood While there is the potential for localised contamination to migrate vertically through the superficial deposits to the bedrock principal aquifer, there is no recorded data for a superficial aquifer and no data for superficial deposits.	Moderate / Low	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.
	Horizontal migration over and through the superficial deposits (soils)	Controlled Waters (Surface Water) Nearest surface water feature is the River Irwell located along the north and west boundary, the Bridgewater Canal south boundary of the site. River quality for the River Irwell is Grade E. There is one surface water abstraction point located 136m west.	Mild Pollution of non-sensitive water resources	Low Likelihood Considering the close proximity from the site to the nearest surface water receptor but taking into account the poor water quality and surrounding industrial land use and the lack of historical industries on the site.	Low	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.
Significant sources of ground gas: - Localised organically rich deposits present within the natural soils. - Infilled land (non-water) recorded 126m east of the site.	Vertical and horizontal migration through existing service corridors and the underlying superficial deposits	End-user of site (Residential)	Medium Human health risk	Likely There is potential for gas generation from the close proximity of recorded Made Ground from BGS maps which could potentially comprise of organically rich deposits.	Moderate	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.

7.0 Conclusion and Recommendations

The qualitative risk assessment (QRA) determined a varied level of level of risk associated with the proposed development.

The QRA concluded by recommending that generic quantitative risk assessments (GQRA) were conducted to confirm the assessment of risk ascribed to each of the respective potential pollutant linkages (PPLs). It is recommended that the GQRA is conducted as part of a ground investigation in support of the engineering design of the proposed development.

In summary, the following recommendations are made:

- Obtain a Detailed UXO Risk Assessment Report prior to any intrusive works being undertaken at the site;
- Undertake an intrusive ground investigation;
- Undertake a GQRA as part of the ground investigation; and
- Undertake ground gas monitoring over a period of two-three months for potential hazardous gases.

It is further recommended that the site investigation works are completed in advance of any development works taking place.

7.1 Contaminants of Concern

Potential contaminants of concern associated with the sources identified within the Conceptual Site Model in *Section 6.0* of this reporting include but are not limited to: broad range aliphatic and aromatic hydrocarbons present within any fuel oils; polycyclic aromatic hydrocarbons (PAHs); inorganic compounds including heavy metals; and asbestos present in discarded building materials.

Potential contaminants associated with the airborne dust/particulates include but are not limited to: polycyclic aromatic hydrocarbons and inorganic compounds including toxic metals that are also accounted for by potential onsite contaminants of concern.

7.2 Other Considerations

The requirement for additional surveys, e.g. arboricultural and ecological surveys, should be confirmed through advice from a suitably qualified and experienced professional.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
