PLANT AND EQUIPMENT
Detail the tools, plant and equipment required for the project
Chapter 8 barriers Signage Stencils Paint and Brushes Ladders Steps MEWP – EXACT SPEC TBC First Aid Kit

DELIVERY OF MATERIALS / TRAVELLING TO WORKSITE METHODOLOGY	
Outline how you will be delivering materials or travelling to your worksite. This should be site and job specific and go into as much detail as possible. Enter details on how materials are to be moved to the worksite location, parking and barrier and signage.	
Step 1.	Arrive at site (light loads, walking with trolley – heavy loads via van) and put materials in a non-obstructing manner as advised by the site supervisor. All work equipment, materials and tools will be kept within the defined works area at all times, site will not be left unattended.
Step 2.	Agree limits of worksite with GSA representative.
Step 3.	Set up worksite, Solid Physical barriers to be used.

WORKING METHODOLOGY
List every task to be covered in this proposal and state how you will be safely conducting the works. This should be site and job specific and go into as much detail as possible.
Set up worksite, the works will be carried out within the confines of an enclosure and work area. The site supervisor will ensure that walking routes for members of the public will be set up using chapter 8 barriers. Set up with appropriate signage, positioned to ensure Members of the public are not exposed to any risk during the work activities Cables will be routed as not to create a trip hazard. No equipment will be left unattended during the works and left over night in an unsafe condition. When MEWP is not in operation / parked, boom arm to be dropped and not left in the air

Global Street Art, Telephone house,
69-77 Paul Street,London, EC2A 4NW.

globalstreetart.com
Company Registration Number: 07251502

Pre-Works Methodology

Prior to work commencing the supervisor shall carry out a briefing to advise all technicians of work procedures which are to be carried out on site and to discussed any changes in safety issues and amendments to the RAMS.
The survey report provided by GSA to be referred to, and job sheets to ensure the correct works are carried out.

During works:

Only IPAF operators to use MEWPS where applicable and Scaffold contractors to amend scaffold
Keep a solid SWA and if anyone enters the SWA please stop works until they leave.
Take fresh air breaks and wear all RPE and PPE as per COSHH attached
Be clean and tidy to stop paint rolling into road
We will have a floor person on the ground to monitor works while the MEWP is in operation.

Post works:

All removed components and waste materials will then be removed from site. The waste will be transported back to the GSA depot for disposal by a licensed waste carrier.
Site supervisor to fully assess the area to ensure all PPE and waste has been removed from the work site.
When MEWP is not in operation / parked, boom arm to be dropped and not left in the air

WORKING AT HEIGHT METHODOLOGY	
The area around and below where you are working must be cordoned off using Solid Physical barriers to protect other personnel and members of the public. All tools are to be secured by lanyard. No loose objects are to be left at high level when you are not working in the area. Access equipment to all high level works must be secured at all times. *NB: Working at Height must be avoided where practicable.*	
Are you able to avoid working at height through the use of readily available equipment?	NO
Will you be working on an even and flat surface? If no your access equipment must be of a type to ensure the working platform is level and secure.	MEWP – by SMITH HIRE EXACT SPEC TBC
What access equipment will you be using?	MEWP – EXACT SPEC TBC
Is this access equipment the most suitable for the proposed work activity in the proposed working environment?	YES
Does the access equipment prevent the risk of falls from height?	YES – MEWP with metal railings

Antaeus Graffiti Ltd TA Global Street Art
Global Street Art, Telephone house,
69-77 Paul Street,London, EC2A 4NW.

globalstreetart.com
Company Registration Number: 07251502

If no to the last question, what equipment will be used to reduce the consequence of a fall from height?	Lanyards and harnesses
Are all staff trained and competent in the safe use of access equipment?	Yes – IPAF trained
Are maintenance records available for all access equipment?	Yes
Will pre use checks be undertaken prior to access equipment being used?	Yes
Detail your system of working below:	
Ladders inspected prior to works commencing and fully restrained where possible, in accordance with working at height training and information sheets available from GSA. RESCUE PLAN – ALWAYS HAVE TWO WORKERS SO IF ONE PASSES OUT THE OTHER RESCUES	

MANUAL HANDLING METHODOLOGY	
The area around where you are working must be cordoned off using Solid Physical barriers to protect other personnel and members of the public.	
Have you undertaken and recorded relevant assessments of manual handling operations?	Yes
Where practicable will mechanical means of lifting and transporting items be used?	Van / Barrow
Where mechanical means is impracticable will you ensure sufficient persons are made available to lift loads, taking into account the size, shape and weight?	Yes
Are all operatives trained and competent in manual handling techniques?	Yes
Will you ensure access areas are clear of obstacles and that lighting is sufficient?	Yes
What PPE will be used by the operatives as highlighted by your risk assessment?	Boots, gloves, head protection
Will you ensure sharp edges are protected?	Yes
Will items be stored such that heaviest loads are in the most convenient position for the operative to lift?	Yes
Detail your system of working below:	

Antaeus Graffiti Ltd TA Global Street Art
Global Street Art, Telephone house,
69-77 Paul Street,London, EC2A 4NW.

globalstreetart.com
Company Registration Number: 07251502

All tools and equipment to be carried in secure bags not overloaded trolley and barrow

WASTE STORAGE AND DISPOSAL METHODOLOGY

The area around where you are working must be cordoned off using Solid Physical barriers to protect other personnel and members of the public.

ALL WASTE ARISING FROM THE WORKS MUST BE REMOVED DIRECTLY FROM SITE.

No waste or waste bags are to be left unattended at any time.

Antaeus Graffiti Ltd TA Global Street Art
Global Street Art, Telephone house,
69-77 Paul Street,London, EC2A 4NW.

globalstreetart.com
Company Registration Number: 07251502

TRAFFIC MANAGEMENT AND PEDESTRIAN PROTECTION METHODOLOGY

Adequate measures should be used to control traffic as road users including pedestrians, cyclists and push chair users should not be put at risk, they should be able to see the extent and nature of any obstruction well before they reach it.

The contractor should pay particular attention to the needs of disabled people and should also consider other vulnerable groups such as the elderly, children and those with push chairs.

Solid barriers should be used for all works, if the site is being left overnight, Strongfence/Heras type barriers will be required. A continuous barrier should be constructed with all fencing fastened together with clips.

All Traffic Management must be planned and Risk Assessed with drawings and/or diagrams attached to this Works Package Plan.

What Barriers will be used?	Chapter 8 cordoning off a safe working area around MEWPS
What Signage will be used?	Construction site
For long duration works will barriers/fencing be inspected on a daily basis to ensure they are still safe for passers-by and other road users?	Inspected daily
Will copies of all checks be maintained for inspection by GSA?	Recorded on daily logs

Detail your system of working below:

MEWP positioned in front of wall by IPAF staff.

Set up SWA around MEWP the works will be carried out within the confines of an enclosure and work area.

The site supervisor will ensure that walking routes for members of the public will be set up using chapter 8 barriers.

Set up with appropriate signage, positioned to ensure Members of the public are not exposed to any risk during the work activities

Cables will be routed as not to create a trip hazard.

No equipment will be left unattended during the works and left over night in an unsafe condition.

Use of generator will be required to power tools

If a generator is to be used, consideration will be given to noise levels and the generator will meet current noise regulations.
PPE will be worn at all times when handling a generator and it will be transported using a two-person lift at all times maintaining it horizontally.
The location of the generator will be sited within the barriered area so as not to interfere with the workplace and that any cable/leads do not pose a trip hazard.
The Generator will be placed on sturdy, flat even ground to ensure stability.
The Generator will be fully filled with fuel prior to works commencement off site and should not require refuelling. In the event of refuelling becoming necessary, the generator will be switched off ensuring that there are no other sources of ignition in the area, and allowed to cool sufficiently. Suitable gloves will be worn when carrying out this process.

Antaeus Graffiti Ltd TA Global Street Art
Global Street Art, Telephone house,
69-77 Paul Street,London, EC2A 4NW.

globalstreetart.com
Company Registration Number: 07251502

The fuel would be brought in an approved 5 litre container. After re-fuelling the fuel can lid will be secured and removed from site before re-starting the generator. The generator must be allowed to "cool" down prior to re-filling.
Fire extinguishers and spill kits available, staff trained to use. A RCD circuit protection device will be used at all times, tested each time electrical equipment is to be used. ONLY USE A GENERATOR OUTDOOR DUE TO CARBON MONOXIDE POISONING MEWP TO BE CHARGED OVERNIGHT BY A TRANSPORTER
Pre-Works Methodology Prior to work commencing the supervisor shall carry out a briefing to advise all technicians of work procedures which are to be carried out on site and to discussed any changes in safety issues and amendments to the RAMS. The survey report provided by GSA to be referred to and job sheets to ensure the correct works are carried out. All removed components and waste materials will then be loaded on a vehicle. The waste will be transported back to the GSA depot for disposal by a licensed waste carrier. **Site supervisor to fully assess the area to ensure all PPE and waste has been removed from the work site.**

WELFARE ARRANGEMENTS
Detail Welfare Arrangements for these works below:
Welfare facilities will be sourced locally from coffee shops in short walking distance

ENVIRONMENTAL CONTROLS
Detail Environmental issues and Controls for these works below:
Spill kits available and staff trained – bring all waste spray cans back to GSA for removal by approved waste carriers.

EMERGENCY ARRANGEMENTS

All accidents, incidents and near misses must be reported immediately to GSA .

Keep EYE WASH handy

In the event of an emergency, personnel are advised to:

- **Raise the alarm;**
- **Make the working area safe, with solid barriers;**
- **Vacate the site to a safe location as instructed by manager;**
- **All plant and equipment should be left within the boundaries of the site;**
- **Ensure the Contractor is notified and any losses reported;**
- **Notify the GSA Project Manager with all the details;**
- **Only return to site if emergency services say it is safe to do so;**
- **Do not restart work without permission from GSA;**
