Hi all

As below, we're pricing a small scheme for CS Civils with StormBrixx HD.

I've advised them that ACO's stance on min cover is 450mm but this project only has 430mm. It's a landscaped area, would you be okay with this?

Thanks,

Subject: RE: First Street, Manchester - Attenuation Tank Area Survey

Hi Andy

ACO's general stance is 450mm, but other manufacturers will go down to 300mm so I reckon ACO will be okay with 430mm.

Aside from finished state and pedestrian loading, construction traffic will need considering but the StormBrixx HD system is pretty strong so you should be okay providing that area isn't used for artic deliveries.

Thanks,

Subject: RE: First Street - Attenuation Tank Area Survey

Morning Richard

This depends on the tank manufacturer, the product that MPB used previously requires a manhole in the same position at either end for access into the inspection cells.

Drawing update due this week for the new tank in the green position.

Hello Danny,

In respect to new attenuation tank – CS Civils asking question, if manhole can be omitted and connection of ACO be made direct into tank, silt trap within ACO

This will also allow tank to be made longer and thinner in width.

Regards

Richard

Would the purple or green locations be viable?

Danny

No good, we can't move the tunnel and we can't wait until August to start.

Whats the next option? Can we look at an option further west of current proposal?

Thanks

Anthony

Morning Pav

My vote would be for after August, who is going to make the call?

Danny,

I don't think its achievable and it depends upon the when the tunnel entrance for sample flat visitor will be dismantled.
The other option is to get it done after august.

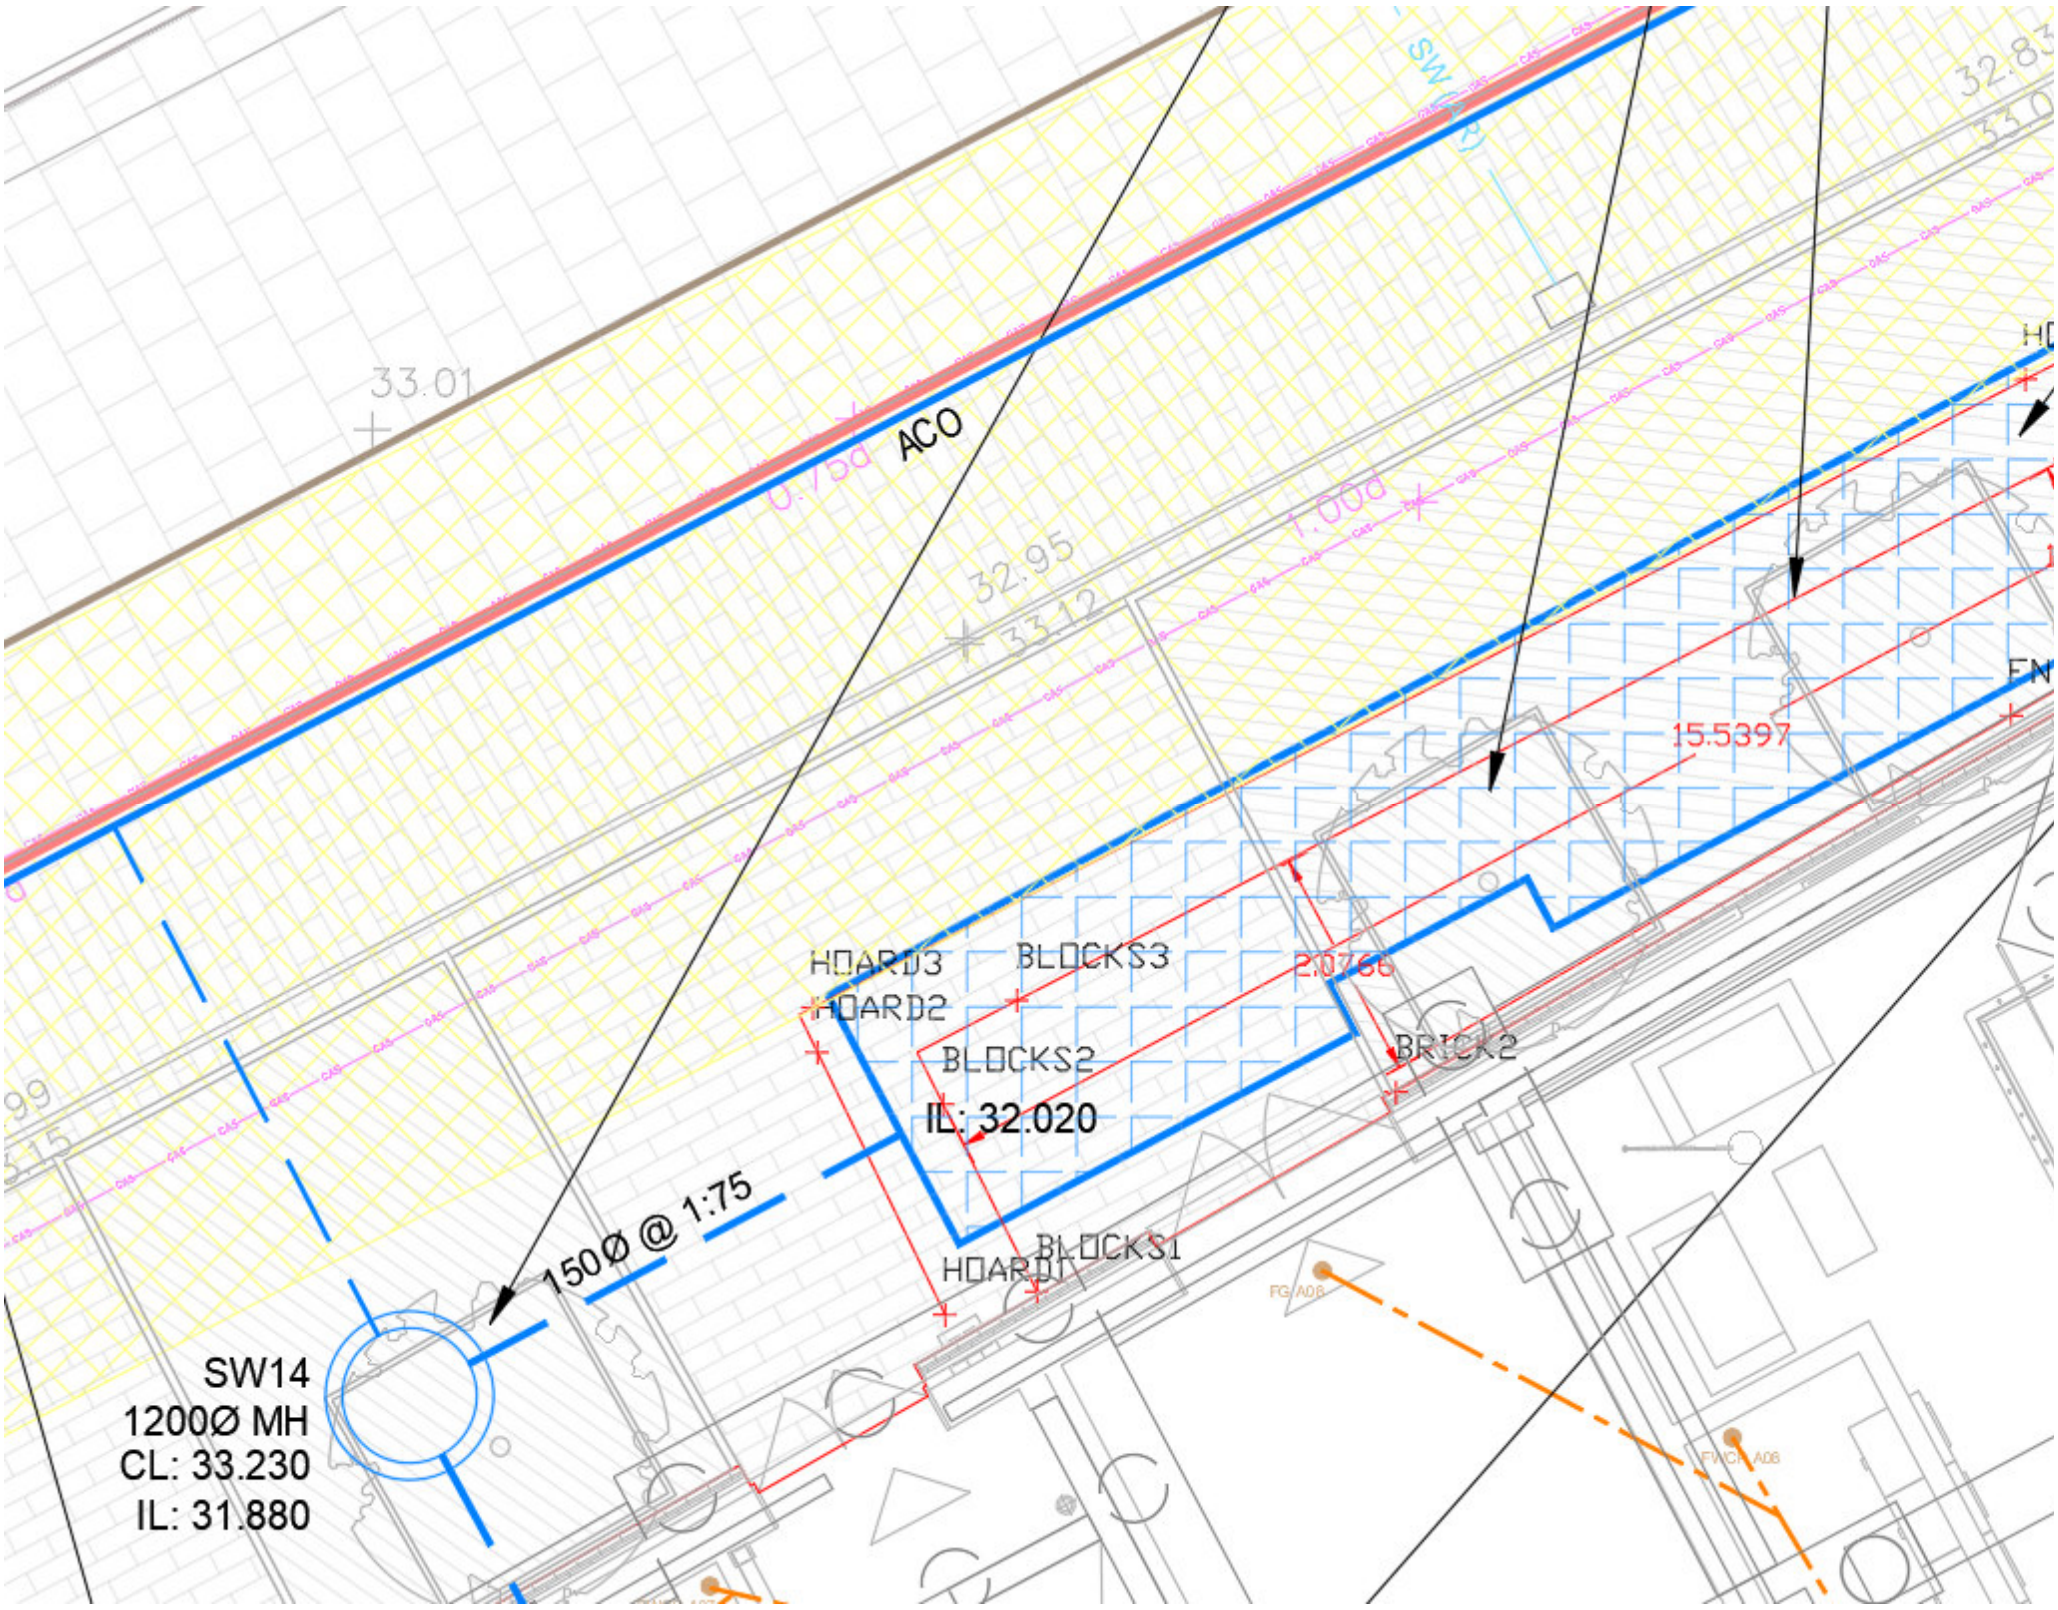

Regards

Hi Pav

Are you taking the hoarding down on the gas easement to remove the concrete blocks?

See the revised tank arrangement below, is this achievable?

Regards

Danny Sinclair

Subject: First Street - Attenuation Tank Area Survey

Afternoon Gents,

Attached survey of the attenuation tank area. From the gas easement to the back of blocks there is 15.5 metres. From the existing foundation to the back of hoarding block it varies from 1.74 m to 2.070 m.

Kind Regards

Jonathon Corcoran
