1.0 Waste Management

The school has an existing waste storage area located within the service yard towards the southern boundary of the site. It is gated and access controlled.

This area houses the waste storage containers required by the Academy, and includes separate provision for general waste and recyclable materials. 2 no. skips are provided for general waste and 1 no. skip for recyclables. All skips/receptacles are emptied two times per week by B and M Waste Services, with whom a waste collection contract is in place.

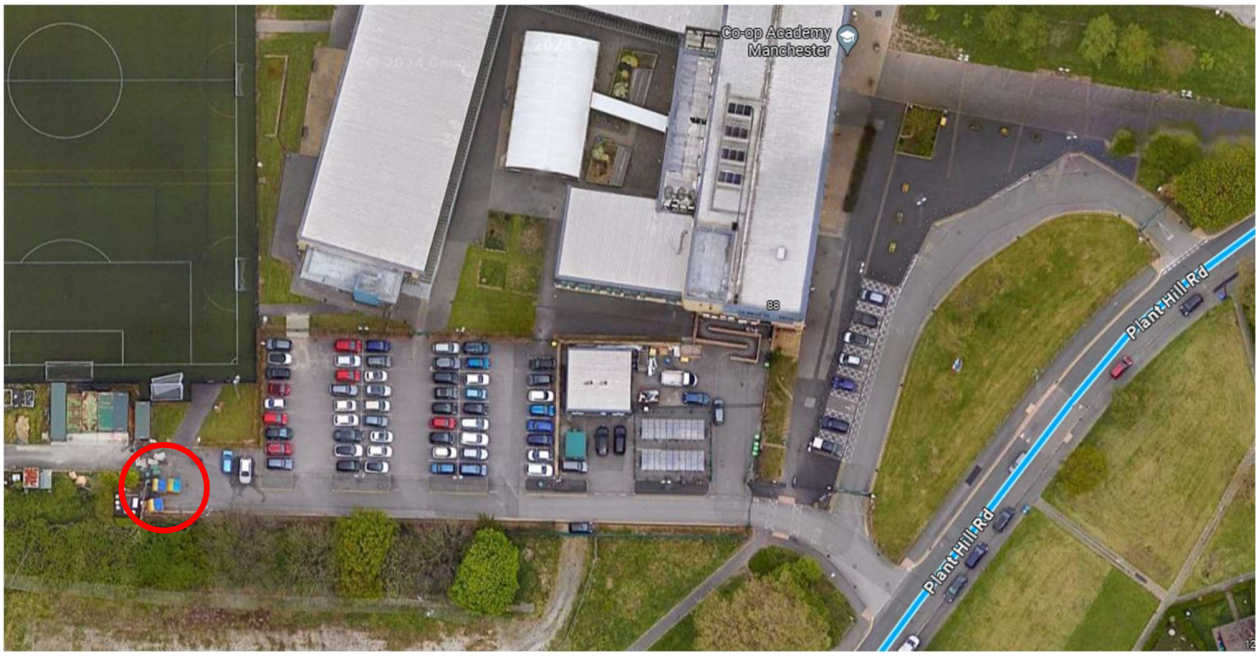

Due to the relatively small size of the proposed modular building, consisting of 3 no. classrooms, 1 no. tea-station and 2 no. WC's, only a small amount of waste will be generated at the building on a daily basis. Separate waste containers will be provided in the building for general waste and recyclable materials.

The waste which is generated in the modular building will have a negligible increase in the overall amount of waste produced at the Academy. The Academy's existing waste storage containers are sufficient to accommodate the additional waste produced at the new modular building, and so there is no proposal to change the size or amount of the existing waste storage provision.

Refuse/waste will be collected from the modular building on a daily basis by the Academy's cleaning staff, and will be taken to the Academy's waste storage area, where it will be stored in appropriate general waste or recycling containers, ready for collection.
