Non-technical Summary

Topic	Commentary
Site description	The north-eastern half of the proposed development comprises several retail units, including Bem Brasil and the Golden Tandoori restaurants. The south-western half of the site comprises derelict warehouses in a state of disrepair. The site is bound to the northeast by Great Ancoats Street, to the southeast by Little Lever Street, the southwest by Houldsworth Street, and to the northwest by Lever Street. Little Ancoats Street intersects the site northwest-southeast.
Development proposals	It is understood the scheme comprises demolition of some of the existing buildings, retention and refurbishment of the existing Bem Brasil building, with façade retentions and the construction of an 18-storey office block with a single storey basement, including a water tank pit (c.6m depth basement to accommodate tank).
Site History	The site was occupied by two public houses from the mid 1800s to the early 1900s. From the 1930s the site has generally had a variety of commercial uses including a bakery, mantle factory and warehouses. The surrounding area was dominantly mixed residential/heavy industrial until the late 1900s when much of the industry ceased to operate.
Ground conditions	Geology is expected to comprise Made Ground (1-3m) over superficial Devensian Till deposits up to 20-25m bgl. Bedrock geology is expected to comprise Chester Sandstone Formation.
Mining Risk	The site lies within a Coal Mining Reporting area however outside of a Development High Risk area. A Coal Authority Consultants report has been obtained for the site and the overall risk of land instability from coal mining legacy is considered very low.
Chemical contamination and remedial requirements	Potential risks from contamination have been identified which would require further investigation to progress the development through planning. Whilst potential risks have been highlighted, these are typical of most brownfield sites.
Radon and gas risk	No ground gas or radon risk has been identified.
Geotechnical Risk	Given the anticipated loadings of an 18-storey building with basement, it is likely that foundations will need to be piled through the deep superficial deposits into the underlying competent bedrock.
Recommendation for further works	Ground investigation is required to assess potential contaminant linkages and to progress the development through planning. It is recommended to undertake this in conjunction with a geotechnical investigation to aid in foundation, basement and slab design.

1 Introduction

1.1 Scheme Outline

1.1.1 It is understood the scheme comprises demolition of some of the existing buildings, retention and refurbishment of the existing Bem Brasil building, façade retentions and the construction of an 18-storey office block with a single storey basement, including a water tank pit (c.6m depth basement to accommodate tank). Proposal drawings are presented within Appendix A.

1.1.2 The report is based on the project proposals and information outlined above.

1.2 Brief

1.2.1 The overall brief of works is to:

- i) Support the planning application by assessing the potential risks from land instability and contamination at the site.
- ii) Provide a preliminary geotechnical appraisal for the scheme based on desk study information.

1.2.2 The objectives of this report are outlined below:

- i) Review and summarise desk study information.
- ii) Undertake a land contamination Tier 1 preliminary risk assessment.
- iii) Provide a preliminary geotechnical appraisal for the project and highlight key geotechnical issues that may impact upon the proposed scheme.

1.3 Definition of Scope

1.3.1 The phasing and scope of the ground investigation works is broadly defined by the following documents.

Title	Document Reference	Publisher	Investigation Scope
Code of practice for ground investigations	BS 5930:2015	British Standards Institution	Phase 1: Desk study
Eurocode 7 — Geotechnical design Part 2: Ground investigation and Testing	BS EN 1997-2:2007	British Standards Institution	Preliminary Investigation
Investigation of potentially contaminated sites — Code of practice	BS 10175:2011+A2: 2017	British Standards Institution	Preliminary Investigation
Land contamination risk management	Online resource, updated April 2021	Environment Agency	Stage 1 Risk Assessment: Tier 1: Preliminary risk assessment

Table 1-A: Definition of Investigation Scope

1.4 Limitations

- 1.4.1** Soiltechnics disclaims any responsibility to our Client and others in respect of any matters outside the scope of this report. This report has been prepared with reasonable skill, care and diligence in accordance with the terms of our contract, taking account of the resources, investigations and testing devoted to it by agreement with our Client. This report is confidential to our Client and Soiltechnics accepts no responsibility of whatsoever nature to third parties to whom this report or any part thereof is made known. Any such party relies upon the report at their own risk.

2 Desk Study

2.1 Sources of information

2.1.1 Reference has been made to the following sources of information:

- An Envirocheck Report and historical map records, presented as Appendix F.
- British Geological Survey (BGS) GeoIndex – Onshore database.
- BGS Sheet 85 (Scale 1:50 000) – Manchester (2011).
- Ordnance Survey OpenData.
- Coal Authority Development and Specific Risk databases.
- Environment Agency open-source databases.
- Google mapping services.
- Interrogation of search engines for anecdotal information on the site history and other readily available online resources.

2.1.2 It should be noted that the boundary areas covered by the Envirocheck, Coal Authority Consultants report and UXO report relate to a larger area than currently under consideration in this report. For clarity, only information relating to the scheme subject to this planning application has been reviewed in the following sections.

2.2 Site Description

2.2.1 The proposed development lies within Manchester city centre. The site is situated in the Northern Quarter of Manchester city centre, ~600m north of Manchester Piccadilly railway station. The post code for the site is M4 5AB. The site consists of mixed-use, low-rise structures, mostly in a state of disrepair in the south-western half of the site. The site is bound to the northeast by Great Ancoats Street, to the southeast by Little Lever Street, the southwest by Houldsworth Street, and to the northwest by Lever Street. Little Ancoats Street intersects the site northwest-southeast.

2.2.2 An aerial image showing the approximate site boundary and development area boundary is presented below, followed by a table summarising the key site features. A Site Plan is provided within Appendix A.

Figure 2-A: Aerial photograph and approximate proposed development area (blue line)

Theme	Feature
Current site use	The north-eastern half of the proposed development comprises several retail units, including Bem Brasil and the Golden Tandoori restaurants. The south-western half of the site comprises derelict warehouses in a state of disrepair. Due to structural issues the interior of the warehouses could not be inspected, however, it is understood that basements do variably exist across their footprints, as well as within the buildings in the northeast of the site.
Local area land use	The surrounding area is typically of a city centre location with mixed use residential, retail and commercial buildings.
Topography	The site is generally flat. The topography of the surrounding area is also generally flat.
Buildings, surfacing and other permanent features	No soft landscaping was noted on the site. The majority of the site was covered in buildings with the exception of Little Ancoats Street bisecting the site which comprised an asphalt road in a state of disrepair.
Boundary features	The site is bound to the northeast by Great Ancoats Street, southeast by Little Lever Street, the southwest by Houldsworth Street, and to the northwest by Lever Street.
Vegetation	None observed.
On-site / adjacent surface water features	None observed.
Environmental Designations	The site is not reported to be within or in close proximity to any areas of designated sensitive land use, such as a Ramsar Site, Site of Special Scientific Interest (SSSI), or Special Area of Conservation.
Injurious and invasive weeds	None observed.
Asbestos containing material (ACM) in buildings	The scope of this report excludes identifying asbestos within buildings on site, and an asbestos survey was not made available at the time of writing.
ACMs on site	No suspected ACMs were observed in any surface debris.
Potential sources of contamination	None observed, however the interior of the on-site buildings could not be inspected.
Evidence for ground instability	None observed.

Table 2-A: Site Description

2.2.3 The interior of the on-site buildings could not be inspected at the time of writing due to H&S issues in the buildings in the southwest and due to the business in northeast being closed. Photographs of the building interiors have been provided by the Client, and together with general exterior photos, are presented in Appendix B.

2.2.4 The observations provided above are made by a Geoenvironmental Engineer, who is not a specialist in asbestos surveying or invasive weed identification. Any associated comments are intended for use by this report only, and not for any other purpose.

2.3 Planning Records

2.3.1 A search of online planning records held for the site by Manchester Council reveals no current applications or records.

2.4 Previous Reports

2.4.1 Soiltechnics are not aware of any previous ground investigation reports undertaken at the site.

2.5 Site History

2.5.1 The earliest available maps show mixed use development, with a public house at the south of the site and a hotel to the north, which have been recorded from the mid-1800s to 1995. The rest of the site has been mixed use, with several warehouses and then residential and commercial development. At present, the site contains a mix of dwellings and commercial property.

2.5.2 A chronological summary of the site's history is provided below.

Date	On-site	Off-site
1848	Public houses are recorded occupying far north and south of site.	A large gas works, rubber works and iron works are recorded approx. 750m to the north of site. Tram way is recorded on Great Ancoats Street, parallel with northeast of site. Large industrial wharf located within 250m to the south of site. Oldham Road goods station recorded within 500m of site, whilst Victoria station, London Road Station (Manchester Piccadilly) and Ancoats Goods Station are all recorded within 1km of the site.
1891	No significant change.	The area local to the site is predominately residential, whilst multiple cotton mill sites are first recorded within 250m of the site, most notably on Union Street, to the east, the largest of which has a reservoir in the centre. Multiple sawmills are recorded southeast of site within 240m adjacent to a wharf.
1908	No significant change.	Large clothing factory and iron and steel warehouse are developed on site of disused foundry, within 500m southeast of site.
1922	No significant change.	Large Post Office building is recorded adjacent to site on Houldsworth Street.
1931	Bakery is recorded in centre of site. Various warehouses recorded on site. 2 hydrants recorded centrally on site, with another adjacent to the southeast.	A small garage is recorded adjacent to the site.
1948	No significant change.	Significant industrial development recorded NE of site, within 500m, including iron works, wastepaper factory, warehouses and garages.

Date	On-site	Off-site
1953	No significant change.	Development of adjacent Great Ancoats Street recorded, including, a garage and Printing works within 50m.
1959-1968	'Mantle factory' recorded in the west of the site. Hydrant recorded to west of site, not previously shown on 1931 historical map.	Industrial development recorded, including, tobacco factory, printing works and spring axle works adjacent to Rochdale Road, 500m north of site. Car park recorded east of site approx. 110m distant.
1978	No significant change.	Several garages recorded in place of works and mills surrounding wharf to southeast of site. Large car park developed on market site, NW of site, 250m distant.
1986	No significant change.	Substation recorded adjacent to 1953 garage. Government offices developed on adjacent Lever Street. Great Ancoats Street tramline no longer recorded.
1989-1992	No significant change.	Gas works are no longer recorded. Bus station recorded 100m to the southwest. Oldham Road goods station no longer recorded.
Early-2000s to present day	Public houses are now restaurants, concurrent to present day.	Development of garages (100m south) into large car park. Substation recorded adjacent to site.

Table -B: Summary of site history

2.6 Regulatory Enquiries

- 2.6.1 Soiltechnics have contacted Local Authority Building Control and understand that to the best of their knowledge no significant problems associated with failure of foundations are apparent in the area around the site. They have noted that other large developments with basements in the area have been piled, over 10m deep into sandstone bedrock. Property on the opposite side of Great Ancoats Street has been piled, whilst also being sheet piled before a contiguous piled wall was installed with a normal amount of dewatering due to the construction of a basement.
- 2.6.2 Soiltechnics have contacted the Local Authority Environmental Health department to request any pertinent information they may hold for the site or surrounding area. The Local Authority have requested a fee to undertake a search of their records. As an Envirocheck Report has already been obtained which includes searches of several regulatory databases, commissioning the Local Authority search is not considered necessary to complete the desk study and preliminary risk assessment in this instance.
- 2.6.3 A copy of regulatory correspondence is presented in Appendix E.

2.7 Anticipated Geology

- 2.7.1 Based on a review of available records, the site is anticipated to be underlain by the following geological units, in order of sequence, Devensian Till, Chester Sandstone Formation, Manchester Marls Formation and Collyhurst Sandstone Formation.
- 2.7.2 The site falls within the area of a buried glacial valley, where superficial thickening of up to 30m could occur.
- 2.7.3 In addition, due to historical construction and demolition phases occurring at the site, Soiltechnics anticipate that a Made Ground is likely to be present across the entire site footprint, which could be locally deepened in areas of former foundations and basements.
- 2.7.4 A summary of the anticipated geology underlying the site is summarised as follows:

Stratum	Bedrock / superficial	Anticipated thickness (m)	Typical description
MADE GROUND	NA	1.5-3m	Clay, ashes, bricks, stones etc.
DEVENSIAN TILL	Superficial	~20-25m	Clay to sandy clay, unsorted with common pebbles, cobbles and some boulders at the base.
CHESTER SANDSTONE FORMATION	Bedrock	~20-30m	Sandstone, fine to coarse grained. Commonly pebbly. With conglomerates and sporadic siltstones; cross-stratified.
MANCHESTER MARLS FORMATION	Bedrock	~30-40m	Red marl (calcareous mudstone and siltstone) sandy in places, local breccias and pebbly beds. Thin beds of fossiliferous limestone.
COLLYHURST SANDSTONE FORMATION	Bedrock	90-200m	Soft red sandstone with abundant beds of sand grains alternating with beds of fine-grained sharp sand.

Table 2-C: Summary of anticipated geology at the site

2.8 Hydrogeology and Groundwater Sensitivity

2.8.1 The general hydrogeological profile of the site is provided in the table above.

Stratum	Aquifer Designation	Stratum Thickness (m)	Groundwater commentary
DEVENSIAN TILL	Secondary Superficial aquifer	~20-25m	Groundwater confined within more permeable horizons within predominately impermeable soils.
CHESTER SANDSTONE FORMATION	Principal aquifer	~20-30m	Groundwater in exploitable quantities contained within fissures and other discontinuities.
MANCHESTER MARLS FORMATION	Secondary aquifer B	~30-40m	Groundwater potentially present in large quantities, however low permeability marls will reduce potential for abstraction.
COLLYHURST SANDSTONE FORMATION	Principal aquifer	90-200m	Groundwater in exploitable quantities contained within fissures and other discontinuities.

Table 2-D: Preliminary Hydrogeological Model

2.8.2 No pertinent information could be gathered from reviewing publicly available borehole data, and the depth to groundwater is unknown at this stage.

2.8.3 The site is not located within a Source Protection Zone.

2.8.4 There are 3 active groundwater abstraction licenses associated with industrial processes within 1km of the site. The nearest abstraction point is some 836m southwest of the site and is licensed for industrial cooling processes.

2.9 Hydrology and Surface Water Sensitivity

2.9.1 The nearest surface water feature is Rochdale Canal, 190m southeast of the site.

2.9.2 There are no surface water abstraction licenses down-gradient of the site.

2.10 Flood Risk

- 2.10.1 The site falls within a Flood Zone 1 area. This designation indicates there is less than a 0.1% chance of flooding from rivers or the sea in any year.
- 2.10.2 The site is recorded in an area with the potential for surface water flooding during a 1 in 1000 year flood event.
- 2.10.3 The site is recorded in an area shown to have limited potential for groundwater flooding to occur.
- 2.10.4 It should be noted that this information does not constitute a site-specific Flood Risk Assessment and one may be required for the scheme.

2.11 Non-Mining Ground Instability Hazard

- 2.11.1 The Envirocheck Report includes hazard ratings due to natural ground instability, which have been derived by the BGS. These hazards have been summarised in the table below.

Hazard	Hazard Potential	Discussions
Collapsible ground	Very low	-
Compressible ground	No hazard	-
Ground dissolution	No hazard	-
Landslide	Very low	-
Running sand	Very low	-
Shrinking or swelling clay	Very low	-

Table 2-E: Non-Mining Ground Stability Hazards

2.12 Quarrying and Mining

- 2.12.1 The site is located within a Coal Mining Reporting Area, but outside of a Development High Risk Area. On this basis a Consultants Coal Mining Report has been obtained from the Coal Authority and a copy is presented as Appendix C. On review of the data, the site is not considered to be at a significant instability or subsidence risk from the historical coal mining legacy in the area.
- 2.12.2 There are no historical quarries or active mineral sites recorded within close proximity of the site.

2.13 Landfill and infilled ground

- 2.13.1 The following table summarises current and historical landfill sites and infilled ground records within 250m from the site to the site.

Name	Distance from site (m)	Type of record	Waste deposited / resource extracted	Further information
Dale Street Wharf	236 S	Infilled water	Unknown	Partially filled wharf
Leech Street Basin	140 SE	Infilled water	Unknown	Infilled basin

Table 2-F: Summary of landfills and infilled ground records

2.14 Recent industrial activity

- 2.14.1 There are Local Authority Pollution Prevention Controls (LAPPC) recorded within 250m of the site, and they are summarised in the table below.

Type	Distance from site (m)	Description
Express Printers Manchester Ltd	83	PG6/21 Hide and skin processes, authorisation revoked.

Table 2-G: Summary of IPC, IPPC and LAPPC facilities

The site located within a partially industrialised area of the town, and there are many potentially contaminating Contemporary Trade Directory entries in close proximity to the site. The following table summarises the pertinent potentially contaminating active Contemporary Trade Directory entries within 100m of the site.

Name	Direction	Distance from site	Activity
Blossom Motor Co.	NE	66m	Garage services
Serious Clean	N	72m	Commercial cleaning services
V A Clean	NE	77m	Domestic cleaning services

Table 2-H: Summary of Contemporary Trade Directory Entries

- 2.14.2 The site lies 190m northwest of Rochdale Canal. Within 1km there are 24 recorded pollution incidents and 75 discharge consents to surface waters. However, as the site is locally elevated, no incidents or discharges will have an effect on site.
- 2.14.3 There are 3 recorded pollution incidents and 2 discharge consents to land or groundwaters within 500m of the site, as follows.

Discharge Type	Distance from site (m)	Description
Discharge Consent	465 SE	Sewage discharges – final/treated effluent – water company. Into freshwater stream/river.
Discharge Consent	486 SE	Public sewage; storm sewage overflow into freshwater stream/river.
Pollution Incident	221 E	Rochdale Canal, Category 3 – minor incident
Pollution Incident	318 E	Rochdale Canal, contaminated materials: soil & sub-soils, category 3 – minor incident.
Pollution Incident	331 S	Ashton Canal, chemicals – paints/dyes, category 3 – minor incident.

Table 2-I: Summary of discharge consents

2.15 Radon

- 2.15.1 The site is in an area where the above ground radon Affected Area status is classed as a Lower Probability Radon Area.

2.16 Unexploded Ordnance (UXO) Hazard Screen

- 2.16.1 A preliminary risk review has been undertaken by a UXO specialist to assess the risk of encountering UXO during ground investigation and groundworks works and to identify any precautionary measures required. It should be noted that the risk assessment has not been carried out fully in accordance with CIRIA report C681 'Unexploded Ordnance (UXO) A guide for the construction Industry'. A copy of the report is presented in Appendix D.

- 2.16.2 The risk assessment concluded that there is not a credible risk of encountering UXO during the ground investigation or groundworks. A stage 2 detailed risk assessment is not considered necessary prior to works commencing. However, the possibility of UXO remaining on site cannot be completely ruled out at this stage. Therefore, a UXO safety briefing to all personnel conducting ground works would be considered prudent.

3 Tier 1 Preliminary Contamination Risk Assessment

3.1 Objectives

3.1.1 The objective of this preliminary risk assessment (PRA) is to determine the suitability of the site for the proposed redevelopment and end users, in terms of the risk from contamination. The assessment comprises the following steps:

- Identify potential contaminant linkages (PCLs) between sources, pathways and receptors.
- To provide data to assist in the design of potential exploratory and detailed intrusive investigations and to give an early indication of possible remedial requirements, if necessary.

3.2 Evaluation Criteria

3.2.1 The following assessment is undertaken within the legislative framework of the planning system. Therefore, the assessment needs to identify if land contamination could pose an unacceptable risk to human health or the environment, within the context of the proposed development site. In the context of the existing site use, as a minimum, land should not be capable of being determined as 'contaminated land' under Part IIA of the Environmental Protection Act 1990.

3.2.2 The risk criteria for the proposed development is based on a 'minimal risk' approach, whereas under the existing land use a designation of 'contaminated land' would only apply if there is a significant possibility of significant harm (SPOSH).

3.2.3 The risk assessments for proposed use presented below relate to the northwestern area of the site (the development area). We have not been provided with details relating to redevelopment of the southwestern area of the site; risk assessments relating to current site use are relevant to this portion of the site.

3.3 Methodology

3.3.1 The objectives listed above are achieved by utilising the information presented within the desk study to develop an initial conceptual site model (iCSM) and identification of potential unacceptable risks. Depending upon the outcome of the Tier 1 assessment, it may be necessary to undertake a Tier 2 generic quantitative risk assessment (GQRA).

3.3.2 An iCSM relies upon the identification and assessment of PCLs. A contaminant linkage comprises of three key components:

- Source – a contaminant or pollutant that is in, on or under the land and that has the potential to cause harm or pollution.
- Pathway – Current and post-development routes by which a receptor is, or could be, affected by a contaminant.
- Receptor – Something that could be adversely affected by a contaminant, for example a person (current and proposed end users or neighbours), controlled waters and ecosystems.

3.3.3 The Tier 1 risk assessment has been produced with reference to the following guidance:

- '[Land contamination risk management](#)' (EA, 2021).
- BS 10175:2011+A2:2017 'Investigation of potentially contaminated sites – Code of Practice'.
- CIRIA C552 'Contaminated land risk assessment- a guide to good practice', 2001.

- BS EN ISO 21365:2020 'Soil quality – Conceptual site models for potentially contaminated sites'
- BS 8576:2013 'Guidance on investigations for ground gas – Permanent gases and Volatile Organic Compounds (VOC)'.

3.4 Source Assessment

3.4.1 The table below summarises identified sources based on the findings of the desk study. Where appropriate, further discussion has been provided in the paragraphs which follow.

Potential Sources	Contaminant(s) of concern	Detail	Viable source?
On-site sources			
Made Ground of unknown origin including contamination from general historical activities.	Metals, PAH, TPH, VOC, asbestos	There is considered to be a low likelihood of significant sources of contamination arising from historical site uses. Storage and use of fuels (oils and coal) and asbestos in building fabrics are the most likely risk factors. Historically common practice was to bury a portion of the demolition wastes on site prior to construction of new buildings. The site has not recorded significant redevelopment since 1848, but development before this is unrecorded.	Y
	Permanent ground gases (CH ₄ and CO ₂)	No substantial organic-rich Made Ground deposits anticipated from a review of historical mapping. Made Ground may have been placed as part of redevelopment phases; however, organic-rich materials would not be suitable as a building platform and are unlikely to be present. Sustained high-volume generation is not feasible with thin fill deposits with low organic content. Ground gases would not migrate at sufficient volumes or concentrations to pose a viable risk.	N
Radon	Radon	The site is recorded as being in a Lower Probability Radon Area. Basements are at higher risk.	Y
Unexploded Ordnance	UXO	Preliminary risk review indicates low risk of UXO encounter.	N
Aggressive ground conditions due to historical industrial activities	Acids	Site history does not suggest likelihood of significantly acidic ground conditions. Till <i>unlikely to be</i> high in sulphates and pyrites <i>based on</i> parent geology.	N
Aggressive ground conditions due to potentially pyritic ground	Pyrite and sulphates		N
Off-site sources			
Adjacent and nearby industrial and commercial uses within recorded history and recent use including cotton mills, garages, dry cleaners and substations	Petroleum hydrocarbons, VOC, PCBs.	Volatile contaminants in groundwater could feasibly migrate to the site. Unlikely to be significant migration in soils.	Y
Heavily urbanised area	Lead, PAHs	Manchester typically has elevated levels of contaminants in the shallow soils due to a being a heavily developed urban area. For instance, through significant use of leaded petrol in cars.	Y

Table 3-A: Contamination source assessment

- 3.4.2 The site is in an area where the above ground radon Affected Area status is classed as a Lower Probability Radon Area; however, all basements are at increased risk of elevated levels of radon, and further consideration is required.
- 3.4.3 The generic assessment radon maps presented within BRE 211 (2015) show the site to be in an area where no protection is required (for above ground buildings), with no areas recommending radon protection in the near vicinity. Radon is a gas which is derived from the natural breakdown of uranium in soil/rocks and consequently the underlying ground conditions are the primary factor in radon generation. A site-specific geological assessment shows the site to be underlain by the Devensian Till (clays with gravels) and Chester Formation (sandstone), which are understood to have a very low potential for producing radon gas. For that reason, it can be concluded that the proposed basement is not at an appreciably higher risk from radon.

3.5 Receptor Assessment

- 3.5.1 The following table summarises the identified receptors based on current site conditions and our understanding of the proposed end use:

Receptor Category	Principal Receptor	Receptor present?	Detail
Human health	Users of the current site	Yes	Currently mixed use commercial and residential.
	End user of the developed site	Yes	Multi storey office block.
	Construction operatives and other site investigators	Yes	Site to be developed.
	Adjacent site users and off-site members of the public	Yes	Public footpaths and residential properties present adjacent to site.
Controlled waters	Surface waters	No	Surface waters are remote from the site, although within 200m.
	Groundwater	Yes	Site potentially over principal aquifer.
Sensitive ecosystems and species	Current site	No	<i>Site is not currently within, or proposed to form, a designated environmentally sensitive area (e.g. SSSI, RAMSAR, AONB, SPA, SAC)</i>
	Developed site	No	
Property	Soft landscaping (current)	No	Not present.
	Soft landscaping (proposed)	No	Unlikely to be present based on development proposals.
	Building materials	Yes	Concrete classification to be assessed under the geotechnical investigation.

Table 3-B: Receptor assessment

3.6 Pathway Assessment

- 3.6.1 The following table summarises the generic human health pathway assessment for the site, assuming a range of contaminant sources within the underlying soils. Source-specific pathways are considered within the ICSM in subsequent report sections.

Human Health Exposure Pathway	Mixed use commercial land use with no soft landscaping (current)	Multi storey office block with no soft landscaping (proposed)	Construction operatives	Adjacent Site Users
Ingestion, inhalation and dermal contact with soils and dusts	x	x	✓	✓ (inhalation only)
Ingestion, inhalation and dermal contact with site derived dusts indoors	x	x	✓	x
Ingestion of home-grown vegetables	x	x	x	x
Inhalation of vapours in outside spaces	✓	✓	✓	✓
Intrusion and inhalation of vapours indoors	✓	✓	✓	x
Accumulation and Inhalation of ground gas in enclosed structures	✓	✓	✓	x
Permeation into below-ground drinking water pipes	✓	✓	x	x

Table 3-C: Generic pathway assessment

3.6.2 The following table summarises generic pathways for the site which could be viable for the identified controlled water receptors, given our understanding of the hydrogeological model and assuming a range of contaminants in the sub-surface.

Controlled Water Exposure Pathways	Current Setting	Proposed Setting	Mechanism
Site characteristics			
Leaching via infiltration through unsurfaced areas, and surface run-off	x	x	Mobilisation
Leaching via infiltration through cracks/joints in hardstanding areas and drainage infrastructure	✓	✓	Mobilisation
Leaching via saturation from groundwater flooding and shallow/perched groundwater bodies	✓	✓	Mobilisation
Infiltration through sustainable drainage systems	x (assumed not present)	x (assumed not feasible)	Mobilisation
Preferential lateral pathways (e.g. underground services)	✓	✓	Migration
Preferential vertical pathways (e.g. piling, vibro-stone columns)	x (assumed current buildings on traditional foundations)	✓	Migration
Hydrogeological characteristics			
Vertical migration through permeable strata into shallow aquifers and perched groundwater bodies	✓	✓	Migration
Vertical migration through permeable strata into sensitive aquifers at depth	✓	✓	Migration
Lateral migration within shallow and perched groundwater bodies into surface waters	x	x	Migration

Table 3-D: Generic pathway assessment

3.7 Initial Conceptual Site Model (iCSM)

3.7.1 The table below presents our approach to the assessment of risks associated with PCLs. The categories below are based upon the definitions within CIRIA C552 (2001), with the addition of a 'negligible likelihood' scenario, which is to be used where there is no realistic scenario in which harm could occur.

3.7.2 The initial conceptual site model (iCSM) is presented within the following tables overleaf.

		Consequence of harm			
		Severe	Medium	Mild	Minor
Probability of harm	High likelihood	Risk: Very high (high – severe)	Risk: High (high – medium)	Risk: Moderate (high – mild)	Risk: Moderate/Low (high – minor)
	Likely	Risk: High (likely – severe)	Risk: Moderate (likely – medium)	Risk: Moderate/Low (likely – mild)	Risk: Low (likely – minor)
	Low Likelihood	Risk: Moderate (low – severe)	Risk: Moderate/Low (low – medium)	Risk: Low (low – mild)	Risk: Very low (low – minor)
	Unlikely	Risk: Moderate/Low (unlikely – severe)	Risk: Low (unlikely – medium)	Risk: Very low (unlikely – mild)	Risk: Very low (unlikely – minor)
	Negligible Likelihood	Risk: Low (negligible– severe)	Risk: Very Low (negligible– medium)	Risk: Very Low (negligible– mild)	Risk: Negligible (negligible– minor)

Table 3-E: iCSM Risk Ratings

RECEPTOR: PROPOSED END USERS				
Potential Source	Contaminants of Concern	Pathway	Tier 1 Risk Assessment (probability of harm x consequence)	Discussion
Made Ground of unknown origin including contamination from general historical activities	Metals, PAH, TPH, VOC	Ingestion, inhalation and contact with soils and dusts	Risk: Very low (low – minor)	Elevated levels of inorganic and organic contaminants could be present in the Made Ground deposits due to its origin and composition (e.g. potentially containing industrial by-products and uncontrolled demolition materials), and due to unknown historical activities and incidents on site (such as through the storage and use of fuels and chemicals). Current proposals do not include gardens or soft landscaping and it is understood that a basement is proposed. A PCL is unlikely to be present post-development.
	PAH	Permeation into water supply pipes	Risk: Moderate/Low (low – medium)	Organic contaminants could be present in the shallow soils at depths and concentrations which could pose a risk of penetrating drinking water pipes.
	Asbestos	Inhalation of dusts	Risk: Low (unlikely – medium)	Asbestos could be present in uncontrolled demolition material within the Made Ground, or have arisen from works on site where asbestos was present in the building fabric. Current proposals do not include gardens or soft landscaping and it is understood that a basement is proposed. A PCL is unlikely to be present post-development.
Heavily urbanised area	Lead, PAH	Ingestion, inhalation and contact with soils and dusts	Risk: Very low (low – minor)	Elevated levels of contaminants are typical in Manchester's shallow soils, in particular from lead deposited from leaded petrol cars. Current proposals do not include gardens or soft landscaping and it is understood that a basement is proposed. A PCL is unlikely to be present post-development.
Radon	Radon	Migration through the sub-surface into enclosed spaces	Risk: Low (unlikely – medium)	Site is in a Lower Probability Affected area. Underlying geology not considered to put basements at increased risk.
Adjacent and nearby industrial and commercial uses within recorded history and recent use including cotton mills, garages, dry cleaners and substations	Petroleum hydrocarbons, VOC, PCBs.	Inhalation of vapours	Risk: Moderate/Low (low – medium)	Volatile contaminants mobilised in groundwater could potentially migrate to site resulting in a PCL via the vapour pathway.

Table 3-F: iCSM – Proposed End Users

RECEPTOR: CONSTRUCTION OPERATIVES

Potential Source	Contaminants of Concern	Pathway	Tier 1 Risk Assessment (probability of harm x consequence)	Discussion
Made Ground of unknown origin including contamination from general historical activities	Metals, PAH, TPH, VOC	Ingestion, inhalation and contact with soils and dusts	Risk: Very low (low – minor)	No gross contamination of high-risk contaminants anticipated (e.g. cyanide, benzene, and vinyl chloride). Standard PPE and hygiene protocols for working on brownfield sites are likely to be sufficient to the mitigate risk.
	Asbestos	Inhalation of dusts	Risk: Moderate (likely – medium)	If present, asbestos in soils can present an acute risk to construction workers, particularly during the enabling works phases. Very low and trace concentrations often pose a low risk if appropriate controls are put in place.
Adjacent and nearby industrial and commercial uses within recorded history and recent use including cotton mills, garages, dry cleaners and substations	Petroleum hydrocarbons, VOC, PCBs.	Ingestion, inhalation and contact with soils and dusts, inhalation of vapours	Risk: Very low (low – minor)	Standard PPE and hygiene protocols for working on brownfield sites are likely to be sufficient to the mitigate risk.

Table 3-G: iCSM – Acute Exposure to Construction Workers

RECEPTOR: ADJACENT SITE USERS FOLLOWING COMPLETION

Potential Source	Contaminants of Concern	Pathway	Tier 1 Risk Assessment (probability of harm x consequence)	Discussion
All identified potential contaminant sources	Metals, PAH, TPH, VOC, asbestos, PCBs	Ingestion, inhalation and contact with soils, dusts and vapours	Risk: Low (unlikely – medium)	Based on the exposure pathways that would be present from the developed site, and on the anticipated levels of contamination, it is considered unlikely that a pollutant linkage could pose an unacceptable risk to off-site receptors.

Table 3-H: iCSM – Chronic Exposure to Adjacent Site Users

RECEPTOR: ADJACENT SITE USERS DURING THE CONSTRUCTION PHASE

Potential Source	Contaminants of Concern	Pathway	Tier 1 Risk Assessment (probability of harm x consequence)	Discussion
Asbestos fibres and ACMs within the Made Ground	Asbestos	Inhalation of dusts	Risk: Moderate/Low (low – medium)	Potential risk associated with generation of air-borne asbestos fibres and dust during construction main earthworks phase. Whilst there is a low likelihood of harm occurring due to the effect of fresh-air dilution, the risk cannot be discounted at this stage.
All other potential contaminant sources	Metals, PAH, TPH, VOC, PCBs	Ingestion, inhalation and contact with soils, dusts and vapours	Risk: Low (unlikely – medium)	Unlikely to pose a viable risk to off-site receptors.

Table 3-I: iCSM – Acute Exposure to Adjacent Site Users

RECEPTOR: CONTROLLED WATERS

Potential Source	Contaminants of Concern	Pathway	Tier 1 Risk Assessment (probability of harm x consequence)	Discussion
All on-site sources	Metals, PAH, TPH, VOC	Leaching and vertical migration (Groundwater)	Risk: Very low (unlikely – minor)	Potential for low level leachable contaminants within the Made Ground, however pathway restricted by surface hardstandings/buildings and unlikely that the source is large enough to significantly affect groundwater. In addition, all Made Ground onsite is likely to be largely excavated and disposed offsite during formation of the basement.
All off-site sources	Petroleum hydrocarbons, VOC, PCBs	Leaching and vertical migration (Groundwater)	Risk: Very low (unlikely – minor)	On-site sources of contamination are unlikely to contribute to worsening of groundwater contamination originating from an off-site source.

Table 3-J: iCSM – Controlled Waters Risk

RECEPTOR: PROPERTY				
Potential Source	Contaminants of Concern	Pathway	Tier 1 Risk Assessment (probability of harm x consequence)	Discussion
Aggressive ground conditions due to historical industrial activities	Acids	Direct contact with building materials in the ground	Risk: Negligible (negligible– minor)	Site historical activities unlikely to have resulted in significantly acidic ground conditions.
Aggressive ground conditions due to potentially pyritic ground	Pyrite and sulphates		Risk: Moderate/Low (low – medium)	Incorrectly specified concrete in contact with potentially pyritic underlying soils may degrade over time resulting in structural weakening.

Table 3-K: iCSM – Risk to Property

- 3.7.3 The risk to identified receptors from the proposed developments under the planning regime are assessed under a ‘minimal risk’ approach. Whereas, the risk to receptors under the current and continued use of the site is dealt with under the regulatory framework of the Part IIA regime, where Soiltechnics consider if there is a reasonable chance of a ‘significant potential of significant harm’ (SPOSH) occurring. This is not equivalent to a due diligence assessment for the continued use of the site to aid in determining potential contaminated land liabilities or land valuations.

3.7.4 The following table sets out the risk to current users considering a SPOSH approach:

Receptor	Potential Source	Contaminants of Concern	Pathway	Preliminary Assessment: Is their reasonable evidence of SPOSH?	Discussion
Human Health (Current and adjacent site users)	All potential contaminant sources identified above	Various Contaminants	Inhalation, ingestion and contact with soils, dusts and vapours.	No	Whilst potential contamination sources have been identified, Soiltechnics have not encountered any evidence which indicates there could be a significant possibility of significant harm to human health occurring from contamination on site.
Controlled Waters (Surface water and groundwater)	All potential contaminant sources identified above	Various Contaminants	Mobilisation and migration	No	Whilst potential contamination sources have been identified, Soiltechnics have not encountered any evidence which indicates there could be a significant possibility of significant harm to controlled waters occurring from contamination on site.
Ecosystems	All potential contaminant sources identified above	Various Contaminants	Direct contact and root uptake	No	The site does not fall within a relevant designation for environmentally sensitive land (e.g. SSSI, NRA, Ramsar).
Property	All potential contaminant sources identified above	Various Contaminants	Various pathways	No	Through undertaking the desk study, no evidence of potentially significant harm occurring to property has been identified.

Table 3-L: *iCSM – Current Site Risks (Part IIA)*

3.8 Preliminary Risk Assessment Conclusions and Recommendations

3.8.1 In summary, the PRA has not highlighted any potential contaminant linkages (PCL) which could pose a significant possibility of significant harm under the current land use. In terms of the proposed development scheme, a minimal risk approach applies, and PCLs have been identified which require further consideration.

3.8.2 Overall, each PCL identified as posing a risk of ‘Moderate/Low’ or higher should be considered as part of an intrusive Tier 2 generic quantitative risk assessment (GQRA). The following table summarises the principal receptors at risk which require further investigation to support the proposed development.

Receptor Category	Principal Receptor	PCL Present Requiring Further Investigation?
Human health	Current site users	No
	Proposed site users	Yes
	Proposed site users (permanent ground gas)	No
	Proposed site users (radon)	No
	Adjacent site users and off-site members of the public (during the long-term use of the site)	No
	Adjacent site users and off-site members of the public (during the construction phase)	Yes
	Construction operatives	Yes
Controlled waters	Surface waters	No
	Groundwater	No
Property	Soft landscaping (current)	No
	Soft landscaping (proposed)	No
	Potable infrastructure	Yes
	Building materials	Yes

Table 3-M: Receptors at Risk Under The Proposed Scheme

4 Geotechnical Discussion

4.1 Scheme overview

- 4.1.1 It is understood the scheme comprises demolition of some of the existing buildings, retention and refurbishment of the existing Bem Brasil building, façade retention and the construction of an 18-storey office block with a single storey basement, including a water tank pit (c.6m depth basement to accommodate tank).
- 4.1.2 The following assessments provide a preliminary assessment without explicit verification of ground conditions. Intrusive investigations are recommended to inform detailed design.

4.2 Geotechnical Category

- 4.2.1 In accordance with BS EN1997-1:2004 + A1:2013 (Eurocode 7), the project is likely to be designated as Geotechnical Category 2. This category includes projects with *conventional types of structures and foundations with no exceptional risk, or difficult ground or loading conditions*. Furthermore, *routine design procedures* are appropriate.

4.3 Key Geotechnical Issues

- 4.3.1 In view of the anticipated ground conditions, the following list summarises the key geotechnical issues that may impact the scheme and will therefore need to be appropriately investigated and potentially managed during the lifecycle of the project:
- Made Ground
 - Groundwater

4.4 Made Ground

- 4.4.1 Based on historical records the site has been developed for over 150 years. A deposit of Made Ground should be expected, although this is difficult to predict and should be confirmed through an intrusive site investigation.

4.5 Groundwater

- 4.5.1 Geological archive information has provided relatively little detail regarding potential groundwater levels. The response from Building Control suggests that active dewatering has been required for nearby developments with basements, therefore shallow groundwater should be expected, perched within granular lenses in Till deposits.
- 4.5.2 Groundwater levels should be confirmed as part of a geotechnical site investigation, to include evaluation of seasonal changes in groundwater levels.

4.6 Building Foundation Strategy

- 4.6.1 The underlying naturally deposited Till deposits are likely to adequately support concentrated loads on pad / strip foundations. However, the scale of the proposed office block is such that a piled foundation, raft or combination of these will be required (the latter potentially offering more cost benefit to the project).

4.6.2 In view of constraints imposed by adjacent roads and nearby buildings, a piled basement retaining wall is anticipated. A ground movement assessment should be undertaken to assess the risk of inducing movement in adjacent structures as a result of basement excavations.

4.6.3 An intrusive ground investigation will be required to confirm ground conditions and soil & rock geotechnical properties.

4.7 Aggressiveness of the Ground to Buried Concrete

4.7.1 It is recommended that samples of soils from across the site that will potentially be in contact with concrete are tested to determine the aggressive concrete (AC) and design sulphate (DS) classes following BRE Special Digest 1:2005 '*Concrete in aggressive ground*'.

4.8 Drainage

4.8.1 It is understood that the proposed building will occupy the entire site area and will include a basement. Soakaway systems are therefore unlikely to be feasible.

5 Recommendations for further works

5.1.1 The following table summarises the additional works which should be undertaken prior to commencement of any construction works and in support of the planning conditions.

Aspect	Delivered By	Description	Necessity
Exploratory Investigation and GQRA	Soiltechnics	<p>The PRA has identified potential contaminant linkages which require further investigation through intrusive methods. An exploratory phase of works is therefore required.</p> <p>Exploratory works might include a series of deep and shallow boreholes to confirm ground and groundwater conditions. Boreholes have the advantage of limiting surface damage compared to a machine excavated trial pit investigation. The latter will also be difficult given there is limited open space onsite at present.</p> <p>It is recommended to undertake this in conjunction with a geotechnical investigation to determine ground conditions and aid foundation, basement and slab design.</p>	REQUIRED

Section 1 – Mining activity and geology

Past underground mining

No past mining recorded.

Probable unrecorded shallow workings

None.

Spine roadways at shallow depth

No spine roadway recorded at shallow depth.

Mine entries

None recorded within 100 metres of the enquiry boundary.

Abandoned mine plan catalogue numbers

None available.

Outcrops

No outcrops recorded.

Geological faults, fissures and breaklines

Please refer to the 'Summary of findings' map (on separate sheet) for details of any geological faults, fissures or breaklines either within or intersecting the enquiry boundary.

Fault under or close to the property recorded.

Opencast mines

None recorded within 500 metres of the enquiry boundary.

Coal Authority managed tips

None recorded within 500 metres of the enquiry boundary.

Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

Site investigations

None recorded within 50 metres of the enquiry boundary.

Remediated sites

None recorded within 50 metres of the enquiry boundary.

Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas

None recorded within 500 metres of the enquiry boundary.

Mine water treatment schemes

None recorded within 500 metres of the enquiry boundary.

Section 3 – Licensing and future mining activity

Future underground mining

None recorded.

Coal mining licensing

None recorded within 200 metres of the enquiry boundary.

Court orders

None recorded.

Section 46 notices

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

Withdrawal of support notices

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Section 4 – Further information

Based on the responses in this report, no further information has been highlighted.

Future development

If development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply specialist engineering practice required for former mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or coal mines without first obtaining the permission of the Coal Authority.

MINE GAS: Please note, if there are no recorded instances of mine gas within 500m of the enquiry boundary, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded. Developers should be aware that the investigation of coal seams, mine workings or mine entries may have the potential to generate and/or displace underground gases. Associated risks both to the development site and any neighbouring land or properties should be fully considered when undertaking any ground works. The need for effective measures to prevent gases migrating onto any land or into any properties, either during investigation or remediation work, or after development must also be assessed and properly addressed. In these instances, the Coal Authority recommends that a more detailed Gas Risk Assessment is undertaken by a competent assessor.

Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **call us on 0345 762 6848** or **email us at groundstability@coal.gov.uk**.

Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

Opencast mines

Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

Coal Authority managed tips

Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

Site investigations

Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

Remediated sites

Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

Coal mining subsidence

Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

Mine gas

Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission. Please note, if there are no recorded instances of mine gas reported, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded.

Mine water treatment schemes

Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

Future underground mining

Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

Coal mining licensing

Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

Court orders

Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

Section 46 notices

Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

Withdrawal of support notices

Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

Payment to owners of former copyhold land

Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.

The map highlights any specific surface or subsurface features within or near to the boundary of the site.

www.brimstoneuxo.com

INTRODUCTION

The Stage 1 Preliminary Risk Assessment is an initial screening assessment designed to highlight any sources of unexploded ordnance (UXO) with the potential to contaminate a given site.

The aim of the Stage 1 assessment is to identify or discount the need for further detailed research - a Stage 2 Detailed UXO Risk Assessment.

This desktop assessment has been researched and written by a dedicated Researcher / Risk Assessor and produced in accordance with the CIRIA C681 Guidelines: 'Unexploded Ordnance, a Guide for the Construction Industry' (published in 2009).

In preparation for this assessment, original wartime records, historic OS mapping and the *Brimstone UXO Sources Database* have been reviewed. The latter incorporates multiple datasets plotting the positions of a variety of domestic military sites and confirmed historic German bombing targets.

The Stage 1 Preliminary Risk Assessment considers the following:

1. The Proposed Works
2. Enemy Action During WWI and WWII
3. British / Allied Military Activity
4. Historic Site Occupancy
5. Risk Mitigating Factors

THE SITE

The Site (approximately centred on the National Grid Ref: SJ 84742 98574) is situated in in the Northern Quarter of Manchester city centre, approximately 500m north-east of Market Street railway station.

The Site comprises a mixture of low-rise structures in a state of disrepair in the north, north-east and west and high-rise residential flats in the south-east. Little Ancoats Street and Little Lever Street intersect the central section of the Site, splitting the structures into quarters. The Site is bound to the north by Great Ancoats Street, to the east by Newton Street, to the south by Houldsworth Street and to the west by Lever Street.

THE PROPOSED WORKS

At the time of writing, Brimstone was not made aware of any future SI works.

Future development works will comprise the clearance of a large portion of the Site to construct a 19-storey structure with single-storey basement which will include a water tank pit at a deeper depth.

ENEMY ACTION DURING WWI AND WWII

Potential Source of UXO	Significant?	Details
WWI German Bombing	✗	Manchester experienced at least one small-scale air raid during WWI. However, there is no evidence to suggest that the Site was affected.
WWII German Bombing	✓	British District Bombing Density Statistics The Site is located in the WWII-era County Borough of Manchester, which sustained 27 bombs / 1,000 acres, a low-to-moderate bombing density.

		Evidence of Bomb Strikes / Damage	<p>Six HE bomb strikes are recorded within an approximate 250m radius of the Site; the closest of these is recorded approximately 90m west. Within the same mapping, no damage is recorded to the Site, with the closest located approximately 100m north. An online fatalities map for Manchester does not record any fatalities on Site or in the direct vicinity, the nearest was located approximately 300m north-west.</p> <p>No immediately obvious signs of bomb damage, such as tiling repairs or clearance, are visible to the structures on Site, or neighbouring structures. Clearance is visible approximately 160m south-west of the Site.</p>
		Local Bombing Decoy Sites	None within a significant distance. The closest was located approximately 7.9km south-east.
		Local German Bombing targets	Manchester Piccadilly railway station, approximately 600m south, was identified as a primary Luftwaffe target. Additional industrial infrastructure in the Site's surrounds, such as a good station approximately 330m north, were also identified as primary targets.
WWII German Cross Channel Artillery Shelling	✗	n/a	
BRITISH / ALLIED MILITARY ACTIVITY			
Potential Source of UXO	Significant?	Details	
WWII Home Guard (HG) Activity	✗	Soldiers of the 50 th Lancashire (Manchester) Ancoats HG Battalion will have been active locally during WWII. However, armed HG troops are highly unlikely to have accessed/utilised the Site due to its developed nature.	
Site Requisitioned for Wartime Military Use	✗	n/a	
Existing or Historic Army or RAF Training Area / Weapons Range	✗	n/a	
Existing or Historic Military Bases and Other Installations	✗	n/a	
Existing or Historic Munitions or Explosives Factories	✗	n/a	
Existing or Historic Military Defensive Fortifications	✗	n/a	
WWII Light and / or Heavy Anti-Aircraft (LAA and HAA) Fire	✗/✓	Numerous (>30) permanent HAA batteries were active within range of the Site during WWII. LAA guns likely defended vulnerable points within the area too. Luftwaffe activity in the region was relatively frequent. It is possible that an unexploded AA shell struck the Site and penetrated to a shallow depth within any areas of damage.	
Pipe-Mined Locations and Beach Minefields	✗	n/a	
UXO Finds	✗	n/a	

SITE HISTORY

What was the Site occupancy historically, especially during WWI and WWII?

During WWII, the Site comprised a mixture of structures of an unknown nature split into four quarters by Little Ancoats Street and Little Lever Street. Public Houses are recorded within the north-western and south-eastern quarters.

RISK MITIGATING FACTORS

Post-Conflict Ground Works

Post conflict groundworks have been relatively significant in a section of the south-eastern quarter, wherein a section of the structures appear to have been redeveloped into the flats by 2003, possibly disturbing WWII-era soil to shallow (1-2m bgl) depths. The rest of the Site appears to have largely retained its pre-WWII composition and therefore is likely only to have been exposed to general maintenance of the Site to very shallow (<1m bgl) depths. No deep (>2m bgl) intrusions are believed to have occurred on Site.

Likelihood of UXO Remaining

The risk associated with (any) very shallow (<1m bgl) and shallow (1-2m bgl) UXO is likely to have been partially mitigated, although only within areas of post-war redevelopment such as in the south-eastern area. The risk associated with (any) deep (>2m bgl) UXO almost certainly remains unmitigated.

CONCLUSIONS

German UXO:

- Manchester was subject to medium and small-scale air raids during WWII. The wartime figures for the wider borough suggest a low-to-moderate bombing density. However, the Site was positioned in close proximity to the city centre target area and therefore the local bombing density was likely higher than this figure suggests.
- Indeed, six bomb strikes are recorded within an approximate 250m radius of the Site, although the closest of these incidents is plotted approximately 90m west. Furthermore, no damage is recorded to the Site within the same mapping, with the closest located approximately 100m north. Within the same bomb census mapping, no damage is recorded to the Site, with the closest located approximately 100m north.
- Likewise, no obvious signs of bomb damage, such as roofing repairs or clearance, are visible on Site in 1946 post-war aerial photography. The same can be said for the structures in the vicinity to the east, south and west.
- If the structures and roads on / immediately surrounding the Site did not sustain any significant bomb damage (as is thought to be likely), they likely remained inhabited throughout the war, providing a degree of access and monitor to the entire Site, significantly reducing the likelihood any potential UXB strike occurred on Site unnoticed and unrecorded.
- In addition, any UXB strike to these seemingly undamaged structures and roadways would have caused incontrovertible evidence of its occurrence, and so would have been recorded and dealt with at the time.
- Given the lack of visible damage in aerial photography and other consulted sources, the likelihood of encountering a German UXB on Site is not considered to be elevated above the 'background level' for the region.

British / Allied UXO:

- No evidence of significant military activity specifically on Site has been found and none is likely to have occurred.
- It is possible that an unexploded AA shell struck the Site during WWII, however, for the reasons outlined above, this would likely have been noticed and dealt with at the time.

RECOMMENDATIONS

SI Works

At the time of writing, Brimstone was not made aware of any future SI works.

Development Works

A Stage 2 Detailed Risk Assessment is not considered necessary prior to works commencing. However, the possibility of UXO remaining on Site cannot be completely ruled out at desktop stage. Therefore, a **UXO Safety Briefing** to all personnel conducting ground works would be considered prudent.

Subject: RE: STV6307 - Lever Street, Manchester

I personally have not got any knowledge of the immediate buildings but I have spoken to a colleague who inspected the property on the opposite side of GT Ancoats St. that property had a basement and from his memory the building was piled, the site was also sheet piled before a contiguous piled wall was installed with a normal amount of dewatering (because it was a basement). I have been involved in other projects along gt ancoats and further out of the city and would say that the majority from memory are built on piles I believe over 10m deep into sandstone. You would need to test the ground for yourself as my comments and my colleagues comments are from memory only.

Dear Sir/Madam,

We have been asked to undertake a review of a site in Manchester to support the planning consent for a proposed development.

The postal address for the site is:

44 Great Ancoats Street,

Ancoats,

Manchester

M4 5AB

The approximate site location and boundary is shown in the image below.

As part of our investigation, it is customary to approach the Local Authority to enquire whether they have any knowledge of the local area which might impact the geotechnical design or construction methods. For example are you aware of the typical foundation solutions in the area, any adverse ground conditions, whether soakaways are used etc.

If you have any information that may be helpful to inform a full assessment of the site I would be very grateful.

Please do not hesitate to contact me with any questions.

Kind Regards,

Rosie Dean | Administrative Assistant

Good morning,

We have been asked to undertake a Phase 1, Desk Study review of a site in Manchester to support the planning consent for a proposed development.

The postal address for the site is:

44 Great Ancoats Street,
Ancoats,
Manchester
M4 5AB

The approximate site location and boundary is shown in the image below.

As part of our investigation, it is customary to approach the Local Authority to enquire whether they have any knowledge of the local area which might need consideration within the risk assessment and future investigation works. For example:

- Are you aware whether the site or nearby land is recorded as Contaminated Land or due for inspection under the Part 2A regime?
- Are you aware of any known, ground/groundwater contamination which may present a potential risk of harm to the proposed development or require specific investigation?
- Are you aware of any underground tanks or contaminated land uses on or close to the site?

If you have any information that may be helpful to inform a full assessment of the site I would be very grateful.

Please do not hesitate to contact me with any questions.

Kind Regards,
Rosie Dean | Administrative Assistant

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Lancashire And Furness

Published 1850 - 1851

Source map scale - 1:1,056

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1892 - 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1974

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Additional SIMs

Published 1991

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Manchester

Published 1975

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

Ordnance Survey Plan
Published 1980 - 1981
Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local
Published 2023
Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).
