Design Process	19-20

Introduction:

Introduction & Location

This Design & Access Statement (DAS) accompanies the Full Planning Application made on behalf of Jigsaw Homes North.

The development will entail a total of 5no. 2-bedroom 4-person, and 4no. 3-person 5-person terraced units. This scheme will provide housing on currently vacant land which will enhance the urban environment and contribute towards the high demand for housing in the Moston area of Manchester, whilst respecting and enhancing the site's environmental and cultural assets.

The Image highlights the area for development, with the boundary of the site highlighted in green.

Introduction:

Design and Access Statement Methodology

The structure and detail of this document follows guidance set out by the Planning Practice Guidance (PPG), adopted on 6th March 2014. This document provides the following guidance on Design & Access Statements:

What is a Design and Access Statement?

A Design and Access Statement is a concise report accompanying certain applications for planning permission and applications for listed building consent. They provide a framework for applicants to explain how the proposed development is a suitable and considerate response to the site and demonstrate that it is accessible by all prospective users.

Introduction and Purpose Design and Access Statements can aid decision-making by enabling local planning authorities and third parties to better understand the analysis that has underpinned the design of a development proposal.

The level of detail in a Design and Access Statement should be proportionate to the complexity of the application.

What should be included in a Design and Access Statement accompanying an application for planning permission?

A Design and Access Statement must:

- (a) explain the design principles and concepts that have incorporated in the proposed development
- (b) demonstrate the steps taken to appraise the context of the proposed development, and how the design of the development takes that context into account. A development's context refers to the characteristics of the application site and its wider setting. These will be specific to the circumstances of an individual application and a Design and Access Statement should be tailored accordingly.

Design and Access Statements must also explain the applicant's approach to access and how relevant Local Plan policies have been considered. They must detail any consultation undertaken and how the outcome of this consultation has informed the proposed development.

Applicants must also explain how any specific issues which might affect access to the proposed development have been addressed.

Planning & Design Context:

Planning Context and Design Guidance

A detailed assessment of the planning policy framework is set out in the Planning Statement, which accompanies the planning application. This section focuses on the planning policies most relevant to the design and access proposals for the development.

National Planning Policy Framework (NPPF)

The NPPF sets out the Government's Planning Policy for England and is a material for consideration in all planning decisions. As the site is allocated for a new housing development, its development meets much of the NPPF in relation to housing policy, with Section 5 of the Framework providing guidance to local authorities on allocating land for development through the Local Plan and determining applications positively to achieve the Government's objective of significantly boosting the supply of new homes.

Paragraph 124 of the NPPF concerns appropriate densities in new developments. It states that decisions should support development that makes efficient use of land, including the identified need for diverse types of housing; the desirability of maintaining an area's prevailing character and setting; and the importance of securing well-designed, attractive, and healthy places.

Recent updates to the NPPF include the addition of a new paragraph (131) regarding the design of new development. This states that planning decisions should ensure that new streets are tree-lined and that opportunities are taken to incorporate trees elsewhere in developments.

The NPPF sets out the Government's planning policies for England and how these are expected to be applied. At the heart of the NPPF is a 'presumption in favour of sustainable development'. Section 12 of the NPPF 'Achieving well-designed places' establishes the Government's commitment to good design and requires that developers address the following:

- add to the overall quality of the area;
- establish a strong sense of place;
- optimise the use of land and place an importance on high quality design;
- respond to the local character and history;
- create safe and accessible environments; and
- (developments which) are visually attractive with good architecture and appropriate landscaping.

As part of this commitment to good design, the NPPF expects applicants "to work closely with those directly affected by their proposals to evolve designs that take account of the views of the community. Proposals that can demonstrate this in developing the design of the new development should be looked on more favourably." (Paragraph 132, NPPF, 2021)

Manchester's Local Development Framework – Core Strategy Development Plan

Policy H 2 – Strategic Housing Location

According to the policy document cited, the areas to the north and east of Manchester City Centre have been identified as key locations for new residential development.

'Land assembly will be supported in this area to encourage the creation of large development sites or clusters of sites providing the potential for significant regeneration benefits.'

To achieve this, the relevant information to this site has been noted as follows:

- Diverse housing offer which includes affordable housing.
- Include environmental improvements across the area.
- Creating sustainable neighbourhoods which include complementary facilities and services.

Policy H 3 – North Manchester

This policy states the following:

- This level of new development will provide significant opportunities to help change the character of the area, support the economic growth of the City Region by providing a more balanced Community.
- Much of the land in North Manchester is of low value or in need of remediation. This will often only sustain higher density or low value housing. It is important therefore to ensure that housing schemes contribute to overall environmental improvements and where opportunities arise, higher value development is promoted to encourage a mixed and diverse community by retaining or attracting economically active households in Manchester.

Design Considerations:

Site Location & Context

The site is located in the Moston ward of the Manchester city region, to the north-east of the city centre. The site is well connected with bus stops within a short walking distance from the site on Kenyon Lane.

The site is made up of a grassed area off Kenyon Lane and Duncombe Drive. There are also trees of various ages clustered along the south boundary of the site. Beyond the site's south boundary is further grassed area and public pathways, in addition to large clusters of trees.

There are surrounding two storey terraces properties adjacent to the site.

View of the site from Kenyon Lane, facing south

View of the site from Duncombe Drive to the east

Two storey terraces facing the site from Kenyon Lane

View of the site from Duncombe Drive to the West

Design Considerations:

Local facilities & Transport Connections

The proposed site is in the Moston ward of Manchester, which is east of the city centre. The site lies approximately 3.2 miles north east of Manchester City Centre and further to the north of the site, around 2.5 miles away is Junction 20 of the M60 Motorway (Manchester Outer Ring Road). Central Park Tram stop is 0.8 miles from the site, approximately a 12 min walk, this is the most local tram stop and offers quick and efficient transport into Manchester City Centre and towards Oldham and Rochdale.

The site is located a short 0.7 miles from Moston Lane which hosts a small shopping district with local amenities such as a post office, medical practice, Chemist and Superstore.

Within 1.2 miles of the site is the nearest Secondary School, St Matthews RC High School, and within immediate context of the site is St Dunstan's RC Primary School and Lily Lane Primary School. In addition to this there are a mix of community and care facilities close to the site, which you would expect in this outer city region setting. The site also has access to cafes, bars, shops, and other commercial buildings along Moston Lane 0.7 miles from the site.

This site is very well connected to transport links which all lead directly into the city centre or the broader Manchester City Region.

The above map shows the site location in red. The nearby amenities are highlighted in blue and within this area, there are local shops, cafes, post office and bus stops. The Secondary and primary schools are highlighted in yellow. To the South of the site is Central Park tram stop highlighted in purple.

Design Considerations:

Historic Mapping

The historic maps below show the development of the site area since the late nineteenth century. The 1893 map shows some clusters of housing, with the site within close proximity of Dean Brooke Farm. The 1932 map shows the significant increase in housing within the Moston area due to the increase in population and industrialization boom that occurred during this period. The site itself at the time was a small number of houses, and immediate area consisting of clusters of other housing. Between the 1930's and present day, the area developed further and is now home to a range of 2-storey dwellings. Within the development of this area the site had become an isolated parcel of land, in need of a re-purpose.

1893

1936

Present

Design Considerations:

Ward Demographics & Crime

The Moston ward has a total population of 18,807 (2021 data). This Ward is the sixteenth most deprived area in Manchester out of 32 wards and with the ninth (out of 32 wards) highest crime rate. The most frequent type of crimes in Moston are 'violence & sexual offenses' accounting for 40.9% of all crimes, in comparison to the rest of Manchester this is the third worst ward.

The residents in this ward are the sixth highest receivers of housing benefit, universal credit and unemployment benefit for 16+, attests to high levels of economic deprivation, and the necessity for affordable housing. However, despite the very high levels of deprivation, crime in the area is moderately worse than average (for Manchester).

The site area is an open grassed area with several trees clustered across the site. The site is likely to have a nominal impact on crimes, however it offers the opportunity to improve the quality of affordable housing (indoor quality) and provide definition and aesthetic to the urban environment (outdoor quality). The Living Environment Score for the Moston ward is the seventeenth worst and assesses the above 'indoor and outdoor qualities'. The proposal offers affordable high-quality housing which will enhance the existing urban environment.

[Area Profile \(instantatlas.com\)](https://instantatlas.com)

Households receiving
Housing Benefit

Reported Street Crimes

Living Environment Score

The Development Proposal:

Project Aims

1. The proposal has been designed to achieve high quality, modern residential housing.
2. The buildings form, height and appearance resonate with the local environment thereby integrating the scheme into the existing residential context.
3. To retain as many trees as feasible.

Key Objectives for the Development

1. Respecting local character and to retain and enhance views, including views from footpaths approaching the site and from adjacent housing.
2. Delivering a high quality “place” which is sustainable, safe, and attractive.
3. Providing much needed affordable 3 bedroom and 2 bedroom homes with private gardens.

Quantum of Development

The total developable area (excluding area with trees to the south) is: 0.24ha or 2423sqm

Proposed Buildings Footprint: 559sqm
Site Area (Red Boundary Line): 3800sqm

Existing Site Plan

The Development Proposal:

Public Consultation

The community have been consulted on the proposed development. This was carried out through the circulation of leaflets to the immediate neighbours where they were given contact details of the agent to provide their initial feedback. At this stage there was some feedback from a couple of residents neighbouring the site, and we are currently working with the community to address these concerns. We will continue to engage with the neighbours surrounding Kenyon Lane at each step of the process.

Proposed Site Plan

The proposed layout, along with supporting text and illustrations in this section of the Design and Access Statement, indicates the principles of urban structure, (i.e., the framework and the layout of streets and pedestrian routes), and the urban grain, (i.e., the location, arrangement, and design of the development).

Layout

The site offers one parking space per 2 bedroom 4 person house, and two spaces per 3 bedroom 5 person house, as well as a secure bike store in the rear gardens or hidden to the front where necessary. Each unit also has the necessary hard standing space for the storage of four bins and a private garden space. Planting and greenery has been promoted throughout. Existing trees and greenery are to be retained where possible and new trees are proposed wherever appropriate.

Proposed Site Plan

The Development Proposal:

Constraints

The main site constraints are as follows:

- The site has several existing trees to the South of the site, the aim is to retain as many of these trees as possible and propose new planting.
- The site is surrounded by existing 2 storey residential buildings, the possibility of overlooking reduced by maintain appropriate distances. Front garden landscaping and a low-level brick boundary wall has been proposed for privacy and security.

Opportunities

- Creates much needed affordable housing
- The location is suitable for this type of developments with the necessary amenities within a close walking distance.

Site Clearance Plan

The Development Proposal:

Kenyon Lane, Moston | Design & Access Statement

Street Elevation

The proposed terraces will match the existing context in regard of materiality and pitched roofs. Front doors can be seen from the street front promoting secure and safe design. Facing brick enhanced by contrasting brick colours creates a unique character and offers high quality solution to a redundant site. The combination of walls and fencing offer the desired level of privacy, separating the private, semi-private from the public.

Front Elevation (Kenyon Lane)

Rear Elevation (Kenyon Lane)

Front Elevation 3 (Private Drive)

Front Elevation 4 (Private Drive)

The Development Proposal:

Kenyon Lane, Moston | Design & Access Statement

3-Bedroom, 5-Person, 2-Bedroom, 4-person Semi Detached House Type

As noted within the emerging Local Plan Policy, states the Council will seek to provide dwellings that are appropriately sized and arranged to create well designed homes in accordance with Nationally Described Space Standards (NDSS) as a minimum.

The Nationally Described Space Standards for 2-bedroom houses is 93m² which has been exceeded in this design, in accordance with Manchester's emerging space standards.

Ensuring the total area over Manchester's emerging space standards is kept to a minimum, ensures that affordability can be maintained when letting the property. This is particularly important as the residents moving in are likely to be economically deprived. Each unit has an associated secure bike store as indicated on floor plans or site plan.

Ground Floor Plan

First Floor Plan

3B5P, 2B4P Semi Detached Elevations

The Development Proposal:

Kenyon Lane, Moston | Design & Access Statement

2no. 3-Bedroom, 5-Person, 2no. 2-Bedroom, 4-person Terraced House Type

As noted within the emerging Local Plan Policy, states the Council will seek to provide dwellings that are appropriately sized and arranged to create well designed homes in accordance with Nationally Described Space Standards (NDSS) as a minimum.

The Nationally Described Space Standards for 3-bedroom houses is 93m² which has been exceeded in this design, in accordance with Manchester's emerging space standards.

Ensuring the total area over Manchester's emerging space standards is kept to a minimum, ensures that affordability can be maintained when letting the property. This is particularly important as the residents moving in are likely to be economically deprived. Each unit has an associated secure bike store as indicated on floor plans or site plan.

The Development Proposal:

Kenyon Lane, Moston | Design & Access Statement

3-Bedroom, 5-Person, 2no. 2-Bedroom, 4-person Terraced House Type

As noted within the emerging Local Plan Policy, states the Council will seek to provide dwellings that are appropriately sized and arranged to create well designed homes in accordance with Nationally Described Space Standards (NDSS) as a minimum.

The Nationally Described Space Standards for 2-bedroom houses is 70m² which has been exceeded in this design, working in accordance with Manchester's emerging space standards.

Ensuring the total area over Manchester's emerging space standards is kept to a minimum, ensures that affordability can be maintained when letting the property. This is particularly important as the residents moving in are likely to be economically deprived. Each unit has an associated secure bike store as indicated on floor plans or site plan.

Ground Floor Plan

First Floor Plan

3B5P, 2B4P, 2B4P Terrace Elevations

The Development Proposal:

Security

The local council requirements for separation distances have been adhered to, while also offering passive surveillance overlooking the street which provides security for pedestrians. The front garden brick wall creates a boundary of protection for the residents. Tall fencing between neighbors in the proposal ensures privacy, and fencing around the rear boundary offers greater protection from crime. Car parking is located in front of the proposed properties which aids in crime prevention as car theft would be visible to the overlooking residents. The bicycle stores are secure and located in the rear gardens where possible or hidden at the front.

Proposed Site Plan

The Development Proposal:

Waste Collection

The site is located within a residentially developed area and therefore a bin collection schedule is in place therefore the proposed houses and apartments can join an existing bin collection round (image opposite). Each home or apartment has 4 bins, located securely behind and/ or hidden at the front for both aesthetics when walking past the development and security to ensure bins are not vandalised or damaged.

 Grey bins
  Brown bins
  Green bins
  Blue bins

Please note the change to Christmas collection day.

Sustainability & Renewable Energy:

Building Sustainability

Several technologies are currently being investigated for use on the project, such as air source heat pumps and solar PV panels. The final options will be confirmed via Energy calculations (SAP) to demonstrate compliance with the Part L requirements of the Building Regulations.

The project will aim to reduce water consumption to less than 105 litres per person per day in line with the RIBA Climate Challenge 2030 sliding targets. This will be achieved by carefully specifying white goods and limiting the flow of water by use of flow restrictors.

Sustainable construction methods and energy efficiency will be adopted at the detailed design stage. This will promote a high standard of build and construction for the development in accordance with Best Practice Standards.

The development proposals will seek to follow the aspirations in line with the Building Regulations and Housing Review Standards in order to provide a high-quality environment.

Best Practice sustainability will be embraced, which will fully explore issues such as sustainable drainage techniques, and buildings that are resource and energy efficient.

It is expected that the design will explore the following to promote a reduction in carbon emissions:

- Low flow showers, smaller baths and dual low flush toilets as part of controlled water demand and use
- Low carbon lighting, energy controls and management
- Double or triple glazing, and improved insulation
- Conservation of the natural resource such as the site's trees
- Ground level 'urban greening' with the use of street trees, shrub planting
- Plots to provide suitable facilities and storage for recycling and waste
- The building will be in compliance with Part L1 A (New dwellings). The scheme is intended not to use gas to comply with national policy.

P500 Principles

In addition, to reduce both operational and embodied carbon where possible, at this stage the design process looks to incorporate key P500 principles. This will also ensure that running costs are lower for residents. Some of the key principles the design intends to explore are, but not limited to:

- Committing to all new homes being built on a 'fabric first' approach with the intention to exceed the current, and forthcoming 2020, building regulation Part L.
- Supporting the use of sustainable transport options for residents including secure cycle storage and EVC provision for all homes
- Encouraging biodiversity and enhancing natural resources including retention of existing trees and planting of new trees where possible.

Design Process

Initial Site Proposal's

The initial proposal focused on developing the number of affordable units that could be on the site with sufficient rear gardens and privacy of each unit.

The proposed layout included a small part of the dense cluster of existing trees, and insufficient parking for some of the properties. Access to rear gardens were compromised due to the number of properties proposed in each row. This would lead the proposal to develop further, to produce adequate space for parking, access and an open frontage overlook the streets.

The layout also followed the existing grain of the area, by being arranged in rows parallel to the row of existing terraces on Kenyon Lane, while flowing with the adjacent rows of terraces on Duncombe Drive. This arrangement becoming part of the developed layout.

Design Process

Development of Site Proposal

The second phase of design shows a reduction in units to create an open, green and welcoming street scene with opportunities for planting and landscaping, whilst allowing for a necessary increase in parking spaces and access to rear gardens. Following investigations into existing drainage, the design developed further to allow for units to avoid existing drainage easements.

The house types were developed to ensure front entrances could be seen from Kenyon Lane and Duncombe Drive, with the addition of car parking space to the front units to encourage natural surveillance and reduce possibility of crime. Additionally, each unit has 1no. secure bike storage to the rear of the property, and private hard standing to provide area for storing waste bins.

The units fronting Kenyon Lane sit opposite the existing properties following the same pattern ensuring uniformity and an active street scene along this road, with retained area of green space and vegetation.

As the design proposal developed, Age Friendly Principles and Independent Living Principles were introduced into the project. Where possible the design adheres to these principles which include, but were not limited to:

Age Friendly Principle & Independent Living Principles

- Easy and accessible bin storage
- Canopy over entrance to properties
- Natural surveillance in external areas (inc. car parking)
- Adequate car parking
- 1200mm pathways (for walking side by side)
- Promote natural environment i.e., planting, trees.
- Routes from entrance doors to be unobstructed.
- Doorways suitable width to allow free movement.
- Future provisions for specific adaptations, such as grabrails.
- Level access wet room on ground floor flats
- Bathroom with two access points on ground floor flats
- Provisions for disabled parking bays.
- Space for turning a wheelchair in all habitable rooms.
