Executive Summary

Appointment	In March 2021 Curtins were instructed by One Manchester Housing to undertake a Phase 1 Preliminary Risk Assessment of a plot of land located off Palgrave Avenue, Manchester M40 8JW. The site is centred on NGR 385857, 400314 and covers an area of approximately 0.19 Ha. It is understood that the development proposals comprise the construction of low-rise residential housing.
Current Site Status	The site is at the Western end of Palgrave Avenue, with two public paths noted in the north and south ends. The site is currently occupied by public open space, with grass surface cover and a slight discernible slope to the west. A number of trees are noted within the centre of the site, and a fence separated the centre portion of the site from Palgrave Avenue.
Site History	Earliest mapping (1848) shows that the site was occupied by the residential properties with the surrounding area predominantly vacant/agricultural land. Significant residential development was undertaken on-site in the late 1800s with a road dissecting the centre of the site, east to west. By the 1960s the residential properties and road on-site was demolished/removed and replaced with public open space in the configuration it lies in to the present day. Throughout the site's history, its local surroundings are generally occupied by residential properties with limited contaminative potential.
Geology	BGS mapping indicates the site is underlain by Glacial Till Deposits, Devensian superficial deposits and Pennine Middle Coal Measures Formation bedrock. The BGS records from a borehole 300m north-east of the site, encountered boulder clay, to a depth of approximately 12m bgl. The site is located in a low probability radon area where <1% of homes are estimated to be at or above the radon Action Level.
Mining	The site is located within a Coal Mining reporting area. A review of available online data indicates the site is not located within the vicinity of recorded mine entries, or a development high risk area. The risk from shallow coal mining is therefore considered to be **Low**.
Hydrogeology	The site is underlain by a Secondary A Aquifer associated with the bedrock formation. The superficial deposits are designated as a Secondary Undifferentiated Aquifer. The site is not located within a Source Protection Zone (SPZ). There are no potable groundwater abstraction points within 500m.
Hydrology	The nearest surface water feature is the Moston Brook location 293m to the north. There are no surface water abstractions within 500m. The nearest discharge consent is noted 158m to the north west, licensed by United Utilities Water Limited for the of a storm sewage overflow to the Moston Brook.
Unexploded Ordnance	The risk from UXO associated with WWII bombing to construction workers is considered to be **Low.**
Initial Ground Contamination Assessment	The risk from Made Ground posed to the site's end-users and groundwater is considered to be **Moderate / Low** due to the anticipated lack of contamination in the Made Ground. The risk posed to surface water is considered to be **Low** due to the distance to the nearest surface water feature. The risk posed to site end-users from ground generating gases arising from organic / putrescible soils near the site is considered to be **Moderate**.
Recommendations	The following recommendations are made with regards to further works at the site: 1. Undertake a GQRA as part of the ground investigation; and 2. Undertake Ground Gas Monitoring over a period of two-three months for methane, carbon dioxide, oxygen, hydrogen sulphide, gas flow in l/hr, weather conditions and barometric pressure (with confirmation if falling, steady or rising). It is further recommended that this work is completed in advance of any development works taking place.

1.0 Introduction

1.1 Project Background

In March 2021 Curtins were instructed by One Manchester Housing to undertake a Phase 1 Preliminary Risk Assessment of a currently vacant land off Palgrave Avenue, Manchester, M40 8JW.

The location and extent of the site is shown in *Figure 2.1* on the following page. It is understood that the site is to be developed for residential dwellings.

At the time of witing, no proposed site plans were available for review.

1.2 Scope of Services

The Phase 1 PRA is intended to provide an overview of the geo-environmental and geotechnical setting of the site, prior to the proposed development of the site.

Through this overview, the Phase 1 PRA aims to develop both a working conceptual and ground model for the site, as well as present an initial assessment of any risks that could be presented to the development including its intended end users and the wider environment.

Specifically, the Phase 1 PRA provides an initial assessment of the site regarding:

a) Potential on and offsite contamination from historical and/or current uses, including potential ground gas generating sources;
b) The potential impact on the wider environment by historical and or current use of the site of interest;
c) The potential impact from surrounding land uses and other environmental factors;
d) Potential problems associated with geological features such as faulting, mineral extraction, mining and land instability; and
e) The location of apparent sub-surface structures that may affect the proposed redevelopment.

Consideration of detailed flood risk, ecology and archaeological issues are outside of the scope of this report.

2.0 Current Site and Surrounding Area Details

2.1 Site Location and Current Details

Site use, location and description are shown below in *Table 2.1* and *Figure 2.1*.

Table 2.1 – *Site Details*

Site Address	Palgrave Avenue, Manchester, M40 8JW
NGR	385857, 400314
Area of Site	Approximately 0.19 Ha.
Current Site Use and Description	The site is at the Western end of Palgrave Avenue, with two public paths noted in the north and south ends. The site is currently occupied by public open space, with grass surface cover and a slight discernible slope to the west. A number of trees are noted within the centre of the site, and a fence separated the centre portion of the site from Palgrave Avenue.

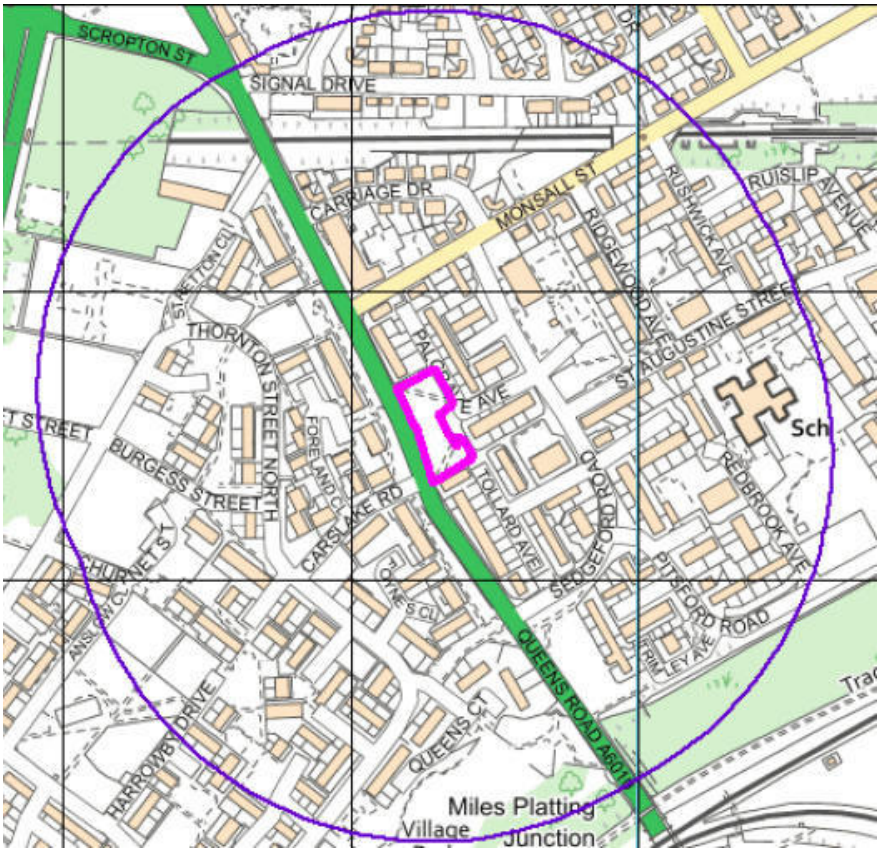

Figure 2.1 *– Site Location Plan (site boundary shown in pink and 250m buffer in purple). Crown Copyright. License Number 100022432.*

2.2 Surrounding Area Details

The following information was established through undertaking an environmental database search. The full Envirocheck report (Ref. 1) is included in *Appendix B*.

Table 2.2 – *Surrounding Land Uses*

Surrounding Area	**N**	Residential properties.
	E	Residential properties followed by Saint Augustine's Primary School.
	W	Queen's Road followed by predominantly residential development.
	S	Queen's Road followed by predominantly residential development.

3.0 Site History

A review of the available historical mapping and other information for the site, as presented within the Envirocheck Report (Ref. 1), has been undertaken and is presented in *Table 3.0* below.

Table 3.0 –** Previous Site and Surrounding Area Uses and Potential Sources of Contamination.* ***Bold text refers to on-site activity.

Date	Description	Potential Sources of Contamination
1848	**The earliest available mapping (1848) shows the site is occupied by residential properties with a road to the adjacent west.** Surrounding land uses of note within the vicinity appear to be mostly vacant fields with a reservoir noted approximately 150m to the west.	• Potential for deposition of construction materials within Made Ground from on-site construction.
1894 - 1908	**The site has undergone significant residential development with Hayden Street running through the centre.** Extensive residential development has been undertaken within the surround area with a school located across the road to the adjacent west. Reservoir noted on previous map no longer shown. The Newton Heath Railway Loop has been constructed 200m to the north. The railway to the south has also undergone major construction, with extensive railway sidings approximately 250m south.	• Potential for deposition of construction/demolition materials within Made Ground from on-site construction.
1965 - 1977	**All residential properties on-site are no longer mapped with the site indicated as public open space.** A public house/hotel has been constructed approximately 100 to the north-west. A significant proportion of residential properties to the west are no longer mapped. Railway sidings to the south no longer mapped. The finishing works to the west of the site has been replaced with residential properties.	• Potential for deposition of demolition materials within Made Ground
1990s – present day	**Residential properties in the east of the site are no longer mapped.** Surrounding land within the vicinity of the site has undergone another round of significant residential development.	N/A.

Potential sources of onsite contamination are further discussed in *Section 6.0*.

4.0 Geology, Hydrogeology and Hydrology

4.1 Geology and Hydrogeology

A study of the Envirocheck (Ref. 1) Report and the British Geological Survey (BGS) 1:50,000 mapping records (Bedrock and Superficial Editions) for Manchester (Sheet 085) dated 2010 (Ref. 2) indicates the following geological and hydrogeological succession underlying the site:

Table 4.1 – *Geological/Hydrogeological Succession*

Geology	Associated Hydrogeological Classification
Glacial Till – Devensian, Diamicton[1]	Secondary Aquifer, Undifferentiated[2]
Pennine Middle Coal Measures – Mudstone, Siltstone Sandstone[3]	Secondary A Aquifer[4]

Notes:
1. *A heterogenous mixture of clay, sand, gravel, and boulders varying widely in size and shape.*
2. *These layers have not been assigned an attribute either category A or B rock type due to not being possible. In most cases, this means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type.*
3. *Interbedded grey mudstone, siltstone, pale grey sandstone and commonly coal seams, with a bed of mudstone containing marine fossils at the base, and several such marine fossil bearing mudstones in the upper half of the unit.*
4. *Comprise permeable layers that can support local water supplies, and may form an important source of base flow to rivers.*

BGS Records do not indicate the presence of Made Ground on site, however the site's historic land use, primarily as residential dwellings, and demolished in the 1970s, suggests that Made Ground soils may be present beneath the site.

The nearest publicly available BGS recorded borehole is located approximately 300m north-east of the site (Ref. 3). This are summarised in *Table 4.2* below:

Table 4.2 – *BGS Borehole Records*

Record Reference	Location (NGR)	Details (bottom to top of strata/details/thickness of strata)	
SD80SE436	300m north-east (385970, 400580)	0.00m to 0.15m bgl 0.15m to 2.00m bgl 2.00m to 5.00m bgl 5.00m to 10.50m bgl 10.50m to 12.50m bgl *12.50m bgl*	Flagstones (0.15m) Fill, soft dark grey silty clay (1.85m) Soft dark brown clay (3.00m) Hard dark brown boulder clay (5.50m) Very hard dark/red boulder clay (2.00m) *Borehole terminated*

There are no BGS recorded fault lines within 250m of the site.

The site is not situated within a Source Protection Zone (SPZ). There are no groundwater abstraction points within 500m of the site.

4.1.1 Mining

A review of the Coal Authority interactive mapping (Ref. 4) for the area indicates that the site is located within a Coal Mining Reporting Area, however it is not located within a Development

High-Risk Area. The nearest Development High-Risk Areas are associated with coal outcrops to the south-west of the site.

There are no recorded mine entries within the site or within 200m of the site boundary.

Consequently, the risk to development from historic coal mining is considered to be **Low**. No further actions are required to further asses the risk to development from historic coal mining.

There are no recorded BGS mineral sites is located within 500m of the site.

4.1.2 Other Ground Stability Issues

The Envirocheck Report (Ref. 1) confirms that there is a no hazard to very low risk from the following ground stability hazards on the site; collapsible ground, compressible ground, ground dissolution, landslide ground, running sands and shrinking or swelling clay.

4.1.3 Ground Gas

Given historic development on site, primarily for residential use, it is possible that Made Ground soils may be present on site. These soils may act as a source of ground gas generation.

There are no current or historical landfills located within 450m of the site.

There nearest location of infilled land is noted 22m to the south of the site noted as unknown filled ground (pond, marsh, river, stream, dock, etc) in 1848.

The Envirocheck Report (Red. 1) and BGS Radon Mapping (Ref. 5) confirms the site is situated in an area where <1% of homes are above the radon action level. Radon protection measures are therefore not considered necessary within the proposed development. However, where the new development incorporates a basement the advice of a specialist Radon assessor must be obtained.

4.2 Hydrology

The nearest surface water feature is the Moston Brook located 293m to the north.

The nearest recorded pollution incident to controlled waters is noted a Category 3 incident 166m to the north noted as an incident from a blocked sewer.

There are no surface water abstractions within 500m.

The nearest discharge consent is noted 158m to the north west, licensed by United Utilities Water Limited for the of a storm sewage overflow to the Moston Brook.

5.0 Unexploded Ordnance Risk Assessment

Military activities including those conducted as part of both the First and Second World Wars have resulted in a legacy of unexploded ordnance (UXO) being present within the shallow soils of the UK.

UXO result from various sources including both allied (military training) and German (bombing raids) with a guide figure of approximately 10% of all munitions failing to function as designed.

The likelihood of UXO being encountered on a development site is influenced by several factors including; the proximity to strategic targets, the nature of the development works being undertaken and evidence of local damage in the post-war periods amongst others. To determine the likelihood of UXO being present on a site, a step-wise risk assessment process is followed. This process is outlined within CIRIA C681 Unexploded Ordnance: A Guide for the Construction Industry (Ref. 6) with the following commentary considered to represent a Preliminary Risk Assessment intended to guide if and where there is a requirement for a Detailed Risk Assessment.

5.1 Preliminary UXO Assessment

Risk mapping (Ref. 7) for UXO's has placed the site in a **Moderate** risk area. Moderate-risk regions are those with a bombing density between 11 and 49 bombs per 1000 acres. These areas are considered to have a significant but low UXB risk. In general, further action to mitigate the risk is considered prudent, although not essential. Care is required when assessing the risk for specific sites where the risk may be higher because of local wartime activity.

A review of the available historic mapping did not identify any evidence of bomb damage onsite or within close proximity of the site boundary. No ruins were recorded in the immediate vicinity of the development site, and no buildings appear to have been demolished following WWII on or surrounding the site. Detailed bomb strike mapping does not record any strikes or damage on the site (Ref. 4).

Considering the above, the risk of encountering potential UXO as part of future intrusive works is considered **Low**.

If unexploded ordnance is discovered during any works, stop immediately, prevent access to the area, and inform the police. If the site boundary or location changes then the UXO risk should be reassessed.

Copyright ©2021 Curtins Consulting Ltd

6.0 Conceptual Site Model & Qualitative Risk Assessment

The conceptual site model (CSM) and Qualitative Risk Assessment (QRA) are presented in the table within this section.

The CSM details the source-pathway-receptor linkages or potential pollutant linkages (PPL) that have been identified for the site. The QRA details the associated level of risk relating to these potential pollutant linkages.

The CSM and QRA concern risk to human health and water environment with additional, more specific risk assessment protocols contained within the main body of this reporting, as detailed in *Section 6.1* below.

The QRA follows the framework outlined within CIRIA C552 (Ref. 8) which is summarised within *Appendix C.*

The 'risk rating' within the QRA refers to the risk that the source, pathway, receptor linkage or PPL is complete. Unless specifically stated it does not necessarily refer to an immediate risk and is intended to be used as a tool to assess the necessity for further assessment/investigation.

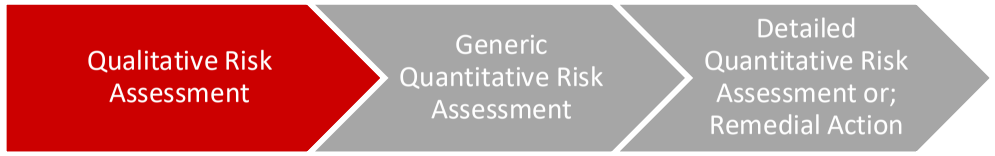

6.1 Additional Risk Assessments

The following risk assessments, listed below, are not included within the main CSM and QRA but nonetheless can be of critical importance to the onward development of the site:

- The risk presented by Mining is discussed and assessed in *Section 4.1.1*.
- The risk presented by Radon is discussed and assessed in *Section 4.1.3*.
- The risk presented by Unexploded Ordnance is discussed and assessed in *Section 5.0*.

Under current health and safety legislation, employers are required to carry out their own appropriate risk assessments and mitigation to protect themselves and their employees, other human receptors and the environment from potential contamination. Such risks must be adequately mitigated by law, specifically the Construction Design Management (CDM) Regulations, 2015 (Ref. 9) which require that potential risks to human health and the environment from construction activities are appropriately identified and all necessary steps taken to eliminate / manage that risk. It has been assumed that any future construction works on site will be undertaken in compliance with these requirements.

Copyright ©2021 Curtins Consulting Ltd

- The table below represents the first stage in the land quality risk assessment process: The Qualitative Risk Assessment.
- For a development site to be deemed 'suitable for use', the level of risk needs to be brought down to acceptable levels, i.e. low to very low risk. The purpose of each stage of risk assessment is ultimately to establish, if there is a requirement for additional levels of assessment to be made to have sufficient confidence to support a risk characterisation or management decision, e.g. remedial action.
- In the absence of specific site data, a Generic Quantitative Risk Assessment is invariably recommended.

Conceptual Site Model			Qualitative Risk Assessment			Recommended Actions
Source	**Pathway(s)**	**Receptor(s)**	**Consequence**	**Likelihood of Occurrence**	**Risk Rating**	
Significant sources of on-site contamination: • Made Ground of unknown composition from uncontrolled deposition of materials onsite during the construction and demolition of the properties onsite	Direct contact, ingestion, inhalation (dust and vapours)	**End-user of site** (Residents) **& Construction Workers**	**Medium** Chronic health risk	**Low Likelihood** Based on the site's limited development history and lack of historical industrial use, the likelihood of encountering significant contamination within the Made Ground is considered to be Low. There is potential for localised contamination related to ACM-containing structures considering structures onsite before 2000s. Likelihood of construction workers coming into contact with contamination on site can reduced by appropriate PPE.	**Moderate / Low**	**Generic Quantitative Risk Assessment** Recommended as part of the ground investigation.
	Vertical migration through the superficial deposits (soils) May occur due to existing service corridors and physical processes including; capillary action and downwards into the natural deposits through infiltration.	**Controlled Waters** (Groundwater) Secondary A Aquifer (Bedrock) There are no potable groundwater abstraction points within 500m. The site is not within a designated Source Protection Zone.	**Medium** Pollution of sensitive water resources	**Unlikely** While there is the potential for localised contamination to migrate vertically through the superficial deposits to the bedrock Secondary A Aquifer, there is a low likelihood of significant contamination being present in the Made Ground due to lack of historical industrial land use and taking into account the lack of an SPZ or abstraction points within 1km.	**Low**	No further action required
	Horizontal migration over and through the superficial deposits (soils)	**Controlled Waters** (Surface Water) Moston Brook (293m north) No surface water abstraction points within 500m..	**Mild** Pollution of sensitive water resources	**Unlikely** Considering the distance from the site to the nearest surface water receptor and the expected low levels of contamination within the Made Ground, this pathway is considered unlikely.	**Low**	No further action required
Significant sources of ground gas: • Localised organically rich deposits present within made ground and natural soils. • Site within a coal mining area.	Vertical and horizontal migration through existing service corridors and the underlying superficial deposits	**End-user of site** (Residents)	**Medium** Human health risk	**Likely** There is potential for gas generation from any localised organically rich deposits present in the Made Ground or superficial soils and reflecting.	**Moderate**	**Generic Quantitative Risk Assessment** Recommended as part of the ground investigation.

Copyright ©2021 Curtins Consulting Ltd

7.0 Conclusion and Recommendations

The qualitative risk assessment (QRA) determined a varied level of level of risk associated with the proposed development.

The QRA concluded by recommending that generic quantitative risk assessments (GQRA) were conducted to confirm the assessment of risk ascribed to each of the respective potential pollutant linkages (PPLs). It is recommended that the GQRA is conducted as part of a ground investigation in support of the engineering design of the proposed development.

In summary, the following recommendations are made:

- Undertake a GQRA as part of the ground investigation; and
- Undertake ground gas monitoring over a period of two-three months for potential hazardous gases.

It is further recommended that the site investigation works are completed in advance of any development works taking place.

7.1 Contaminants of Concern

Potential contaminants of concern associated with the sources identified within the Conceptual Site Model in *Section 6.0* of this reporting include but are not limited to: broad range aliphatic and aromatic hydrocarbons present within any fuel oils; polycyclic aromatic hydrocarbons (PAHs); inorganic compounds including heavy metals; and asbestos present in discarded building materials.

Potential contaminants associated with the airborne dust/particulates include but are not limited to: polycyclic aromatic hydrocarbons and inorganic compounds including toxic metals that are also accounted for by potential onsite contaminants of concern.

7.2 Other Considerations

The requirement for additional surveys, e.g. arboricultural and ecological surveys, should be confirmed through advice from a suitably qualified and experienced professional.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

LANDMARK INFORMATION GROUP®

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

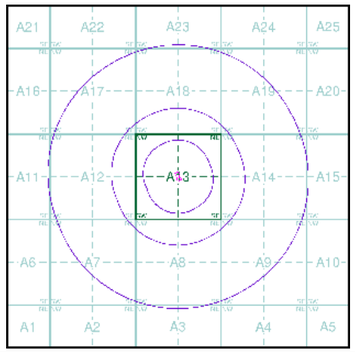

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

LANDMARK INFORMATION GROUP®

Lancashire And Furness

Published 1909 - 1910

Source map scale - 1:10,560

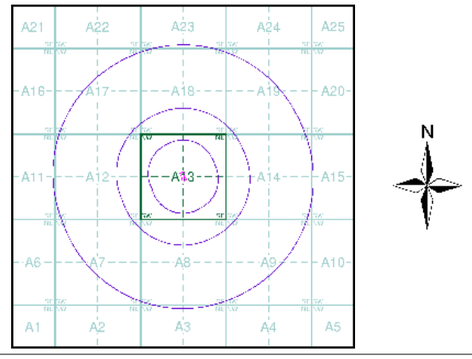

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.
