Executive Summary

Appointment	<p>In September 2019 Curtins were instructed by One Manchester to undertake a Phase 1 Preliminary Risk Assessment of the land off Oldham Road, Newton Heath, Manchester, M40 1HB. The site is centred on NGR SD880006 and covers an area of approximately 1.25 Ha.</p> <p>The Phase 1 is intended to provide an overview of the geo-environmental and geotechnical setting of the site for due diligence purposes prior to the purchase of land by One Manchester as well as support an associated planning application. The intended development is to consist of two residential blocks up to 6-storeys in the west of the site and low-rise residential housing area in the east of the site, with associated soft landscaped areas and areas of hardstanding for car parking.</p>
Current Site Status	<p>The site is divided by Newton Street running north to south. To the west of Newton Street, the site is currently occupied by a warehouse present in the north with hardstanding forming carparking for the warehouse in the south. To the west of the warehouse is a grassed area with some longer vegetation.</p> <p>The site east of Newton Street is grassed with some trees present in the north and is open to the public.</p> <p>The site is relatively flat to the west of Newton Street with several undulations in the eastern area.</p>
Site History	<p>The earliest mapping (1848) shows the site was fully developed, occupied by mostly unspecified buildings as well as a bowling green in the south west corner. From 1893 terraced houses along with a school are mapped, along with Newton Street which runs through the centre of the site north to south; to the east of this runs Allen Street and to the west of Newton Street runs Mount Place and Benjamin Street. Heath Street is mapped adjacent to the southern boundary.</p> <p>From 1908 the site remains unchanged, apart from the addition of two Inn's, one in the north west and the other in the north east. The bowling green in the south west of the site is no longer mapped and there is an addition of Woodman Street in the west of the site. From 1931 a small building in the north of the site is no longer mapped and Mount Place (street) has now changed to Otley Street.</p> <p>From 1951 most of the site remains the same, with small buildings in the central southern area and south-west corner of the site no longer mapped.</p> <p>By 1979 all structures on-site were demolished with Apley and Benjamin Streets no longer mapped by 1990.</p> <p>By 2006 a large warehouse was built in the north part of the central site.</p> <p>From 1948 all the way though to present day, the surrounding site area has seen the development and demolition of mills, works, heavy industry, commercial, mixed used buildings and residential housing.</p>
Geology	<p>Made Ground is not indicated to be present on BGS mapping, however considering considerable historical development, is expected. Surrounding BGS borehole records encountered Made Ground from ground level to between 0.50m and 1.70m bgl.</p> <p>Published mapping indicates the site is underlain by Till (superficial deposits), with historic borehole logs suggesting the deposit is encountered between 3.10m and 12.19m depth. The superficial deposits are underlain by the Collyhurst Sandstone Formation (bedrock) of soft red sandstone composition encountered at 36.88m bgl in a recorded borehole 80m to the east.</p> <p>The site is situated in a coal mining reporting area; however, it is not within a development high risk area. The closest mine entries are approximately 860m north of the site. Coal outcrops and possible shallow coal workings are mapped in excess of 1.3km north and south west.</p>
Hydrogeology	<p>Superficial deposits are designated as a Secondary Undifferentiated Aquifer, with the bedrock is classified as a Principal Aquifer. The site is not located within a Source Protection Zone (SPZ).</p> <p>There are no groundwater abstraction points located within 100m of the site boundary.</p> <p>The site is not located within a Source Protection Zone.</p>
Hydrology	<p>The nearest surface water feature is the Rochdale Canal 56m to the south of the site.</p> <p>No pollution incidents have been recorded within 250m of the site.</p> <p>There is one discharge consent within 500m of the site, 418m north, operated by Vidnor Waste (Greater Manchester) Limited for the discharge of other matter-surface water. This is discharged into a freshwater stream/river called Moston Brook.</p>

Phase 1 Preliminary Risk Assessment

	There are no active surface water abstraction points located within 1km of the site boundary.
UXO	<p>Risk Mapping for UXO's has placed the site in a Moderate Risk area. Analysis of historical bomb mapping from the University of Manchester shows the area surrounding the site has no recorded bomb strikes, targets or damaged buildings.</p> <p>However, two ruins are noted approximately 40m south of the site in historical mapping.</p> <p>Given the demolition of all structures post-war and considering the above, the risk of encountering potential UXO as part of future intrusive works is considered Low with respect to proposed ground investigations.</p>
Initial Ground Contamination Assessment	<p>The chronic health risk posed to site end users by onsite sources of contamination via direct contact, ingestion, inhalation is assessed as Moderate due to the historical residential and commercial use on site, with the addition of industrial use throughout the surrounding area.</p> <p>The risk of pollution of groundwater and surface waters by onsite sources of contamination via vertical/horizontal migration through site soils is assessed as Low respectively due to reduced risk of migration through the Till and distance to the nearest water feature.</p> <p>The chronic health risk posed to site end users by on and offsite soils with the potential to generate ground gases via vertical and horizontal migration through the underlying deposits is assessed as Moderate/Low due to the historical activities on site of demolition and construction phases.</p>
Recommendations	<p>In summary the following recommendations are made;</p> <ul style="list-style-type: none"> • Undertake an intrusive ground investigation; • Undertake a GQRA as part of the ground investigation; and • Undertake Ground Gas monitoring.

1.0 Introduction

1.1 Project Background

In September 2019 Curtins were instructed by One Manchester to undertake a Phase 1 Preliminary Risk Assessment of land off Oldham Road, Newton Heath, Manchester, M40 1HB. The site is centred on NGR 388060, 400660 and covers an area of approximately 1.25 Ha.

1.2 Scope of Services

The Phase 1 is intended to provide an overview of the geo-environmental and geotechnical setting of the site for due diligence purposes prior to the purchase of land by One Manchester and in support of an anticipated planning application. The intended development comprises two residential blocks up to 6-storeys in the west of the site and low-rise residential housing area in the east of the site, with associated areas of soft landscaping and car parking.

Through this overview the Phase 1 aims to develop both a working conceptual and ground model for the site, as well as present an initial assessment of any risks that could be presented to the development including its intended end users and the wider environment.

Specifically, the Phase 1 provides an initial assessment of the site with regard to:

- a) Potential contamination of the site strata by historical and or current use;
- b) The potential impact on the wider environment by historical and or current use of the site of interest;
- c) The potential impact from surrounding land uses and other environmental factors;
- d) Potential problems associated with geological features such as faulting, mineral extraction, mining and land instability;
- e) The location of apparent sub-surface structures and obstructions that may affect the proposed redevelopment; and
- f) The location of above-surface features that may affect the proposed redevelopment.

Consideration of detailed flood risk, ecology and archaeological issues are outside of the scope of this report

2.0 Current Site and Surrounding Area Details

2.1 Site Location and Current Details

A site description is in *Table 2.1* and a site location plan is shown in *Figure 2.1* below.

Table 2.1 – Site Details

Site Address	Land either side of YES Group, 1290 – 1328, Oldham Road, Newton Heath, Manchester, M40 1HB.
NGR	SD880006
Area of Site	Approximately 1.25 Ha
Current Site Use and Description	<p>The site is divided into two by Newton Street running north to south.</p> <p>To the west of Newton Street, the site is currently occupied by a warehouse present in the north with hardstanding forming carparking for the warehouse in the south. To the west of the warehouse is grassed with some longer vegetation. The whole of the western area is fenced off to the public. The site east of Newton Street is grassed with a few trees present in the north and is open to the public.</p> <p>The site is relatively flat topographically to the west of Newton Street and to the east is slightly raised in the west of the grassed area and flat to the east.</p>

Figure 2.1 – Site Location Plan (site boundary shown in pink and 250m buffer in purple).

2.2 Surrounding Area Details

The following information was also established through undertaking a site walkover and an environmental database search (Ref.1) included in *Appendix B*.

Table 2.2 – Surrounding Area

Surrounding Area	N	Oldham Road, industrial/commercial units, residential housing and railway line 150m north.
	E	Droylsden Road, supermarket, residential housing and warehouses.
	S	Holyoak Street, supermarket and industrial/commercial units, with Rochdale Canal 56m south.
	W	Dulverton Street, residential housing and a disused building.

3.0 Site History

A review of the available historical mapping and other information for the site, as presented within the Envirocheck report (Ref. 1), has been undertaken and is presented in *Table 3.1* below.

Table 3.1 – Previous Site and Surrounding Area Uses and Potential Sources of Contamination (onsite uses are indicated in **bold**)

Date	Description	Potential Sources of Contamination
1848 - 1893	<p>The site is fully developed, occupied by mostly unspecified buildings as well as a bowling green in the south west corner of the site.</p> <p>From 1893 terraced houses along with a school are mapped, along with Newton Street which runs through the centre of the site north to south, to the east of this runs Allen Street and to the west of Newton Street runs, Mount Pace and Benjamin Street. Heath Street is mapped adjacent to the southern boundary and Oldham Road is on the northern boundary.</p> <p>Adjacent to the north of the site runs a tramway east to west on Oldham Rd. Moston Brook is located approximately 400m north flowing west.</p> <p>From 1848 generally terraced housing and unspecified buildings occupy the land within 500m of the site. Heath Hall and Heath Cotton Mill are mapped approximately 20m east with a Newton Silk Mill adjacent to the south site boundary. The majority of the land surrounding the site consists of agricultural land.</p> <p>Rochdale Canal is mapped approximately 60m south and a possible drain approximately 50m west.</p> <p>From 1893 the development of electrical engineering works, terraced housing, cotton mills and a brewery within 100m of the site. Monsall Dye Works is directly south of the site with a reservoir 50m from the southern boundary. A second reservoir associated with the electrical engineering works is located 60m south.</p> <p>A small round circular feature (possible pond) is mapped approximately 80m east of the site.</p> <p>Numerous works (dye, engineering and glass) and Mills (cotton and saw) as well as tannery all within 300m of the site.</p> <p>The railway line orientated east-west, is located 200m north, with associated Dean Lane station. Engine sheds are located approximately 260m north west and a reservoir 500m south west.</p>	<ul style="list-style-type: none"> • Uncontrolled deposition of Made Ground during construction onsite. • Potential contamination associated with the Dye Works and Electrical Engineering Works directly south of the site, with silk and cotton mills also located within 100m of the site.
1908 - 1931	<p>The site remains the same, apart from the addition of two Inn's, one in the north west of the site and the other in the north east. The bowling green in the south west of the site is no longer mapped and there is an addition of Woodman Street in the west of the site.</p>	<ul style="list-style-type: none"> • Uncontrolled deposition of Made Ground during construction onsite. • Potential for ground gases from the potentially back-filled

Date	Description	Potential Sources of Contamination
	<p>From 1931 a small building in the north of the site is no longer mapped as the school extends and Mount Place (street) has now changed to Otley Street.</p> <p>A small round circular feature (possible pond) 80m east of the site is no longer mapped.</p> <p>Electrical engineering works mapped approximately 10m south is changed to Albony Works (mineral water) now in its place. The Monsall Works adjacent to the southern boundary of the site is now a mineral water works instead of dye works. The reservoirs associated with the two previous industries are both no longer mapped.</p> <p>From 1908 approximately 50m north of the site three large pits and five small pits are mapped with an unknown use. Another large pit is mapped (possible open cast mining) approximately 250m south west of the site for an unknown use. A reservoir is mapped north of the put (500m from site).</p> <p>Various timber yards, mills, laundry, and football ground are mapped within 200m of the site.</p> <p>From 1931 buildings adjacent to the southern site boundary associated with the Monsall Works (mineral water) have been demolished and a building which houses a cinema is now mapped 5m south of the site boundary.</p> <p>The large pits located 50m north are no longer mapped apart from two which have changed shaped and size. The large pit mapped 200m south west of the site has been extended and reservoirs are now located east of the pit (approx. 270m south west), with a brick works present 230m south west.</p>	<p>reservoirs located within 100m south of the site.</p> <ul style="list-style-type: none"> • Potential contamination associated with the various Works within 250m of the site.
1951 - 1969	<p>The majority of the site remains the same, with two small buildings in the central southern area of the site no longer mapped. The two Inns in the north of the site are no longer mapped although the building foot prints are still in place. The addition of several small buildings in the south west corner of the site.</p> <p>The tramway on Oldham Road is no longer mapped. An electricity substation is mapped approximately 50m south east and 200m north west.</p> <p>There are two ruins mapped approximately 30m south of the site with another mapped approximately 200m south west of the site suggests possible bombings in the area during WWII.</p> <p>A cinema, tannery joinery works and saw mills are located within 200m of the site. The saw mills and joinery works are mapped with tanks and a crane 100m north.</p> <p>Adjacent to the western site boundary the residential houses are no longer mapped.</p> <p>Development of residential housing within 200m. A shirt factory is mapped approximately 30m south of the site.</p>	<ul style="list-style-type: none"> • Uncontrolled deposition of Made Ground during demolition and construction onsite. • Uncontrolled deposition of Made Ground during demolition and construction of buildings and works surrounding the site and deconstruction of the tramway adjacent to the north of the site. • Potential unexploded ordnance (UXOs) surrounding the site. • Potential contamination associated with the Works within 250m of the site. • Potential contamination associated with electricity substation 50m south east.

Date	Description	Potential Sources of Contamination
	<p>The two pits for unknown use 50m north are no longer mapped. This area has now been developed into a saw mill and joinery works 100m north of the site.</p> <p>The large pit present 250m south west has a refuse heap mapped along the edge of it.</p> <p>From 1953 the two ruins 30m south of the site are no longer mapped. The refuse heap located south west of the site is no longer mapped.</p>	
1979 – Present day	<p>From 1979 all buildings have been demolished on site and the site is vacant. Three streets still run across the site aligned north-south, Benjamin street, Newton Street and Apley Street.</p> <p>From 1990 Apley Street and Benjamin Street are no longer mapped.</p> <p>From 2006 a large warehouse is built in the north part of the central site, west of Newton St.</p> <p>The works and reservoirs to the west of the site within 250m are no longer mapped along with the terraced residential housing. This has been replaced by newer residential housing and further residential housing to the south.</p> <p>The terraced residential housing to the north, west and south is no longer mapped. The tanks located approximately 100m north are no longer mapped along with joinery and saw mill 50m north.</p> <p>250m north a refuse destructor is mapped with subsequent platforms and conveyors. The electricity substation 50m south east of the site is no longer mapped.</p> <p>From 1979 250m north an electricity substation is mapped.</p> <p>From 1981 the works located 100m north have been demolished and replaced with small units to make a trading estate. The large pit located 80m south west is now mapped as disused. The engine sheds located 120m north west is now a depot which later in 2019 becomes a factory.</p> <p>From 1987 the football ground 110m east is no longer mapped.</p> <p>From 1990 the large pit 100m south west is now mapped as disused. Later in 2006 the pits are no longer mapped at all with this area later in 2019 being shown as grassed and backfilled.</p> <p>From 2019 the works located approximately 40m south west of the site are no longer mapped. A recycling site is located approximately 420m north.</p>	<ul style="list-style-type: none"> • Uncontrolled deposition of Made Ground during demolition of all buildings onsite. • Uncontrolled deposition of Made Ground following the demolition and construction of buildings offsite.

Potential sources of onsite contamination are further discussed in *Section 7.0*. Potential sources of contamination above not considered likely to impact the site have been discounted from the Preliminary Conceptual Site Model.

4.0 Geology, Hydrogeology and Hydrology

4.1 Geology and Hydrogeology

A study of the Envirocheck records (Ref. 1), BGS online borehole records (Ref. 2) and British Geological Survey (BGS) 1:50,000 mapping records (Solid and Drift Editions) for Manchester (Sheet 085) (Ref. 3) indicates the following geological and hydrogeological succession underlying the site:

Table 4.1a – Geological/Hydrogeological Succession

Geology	Associated Hydrogeological Classification
Made Ground is not indicated on BGS mapping. However, given the development of the site it is considered likely that Made Ground deposits will be present at the site.	N/A
Till, Devensian ¹	Secondary Undifferentiated Aquifer ³
Collyhurst Sandstone Formation ²	Principal Aquifer ⁴

1. These comprise a group of sediments laid down by the direct action of glacial ice, usually sandy, silty clay with pebbles, but can contain gravel-rich, or laminated sand layers; varied in colour and consistency.

2. A soft red sandstone with abundant beds of "millet seed" sand grains alternating with beds of fine-grained sharp sand, some interbedded grey sandstones locally.

3. This designation is assigned in cases where it is not considered appropriate to classify as either Secondary A or Secondary B. This is usually due to the variable characteristics of the material.

4. These are layers of rock or drift deposits that have higher intergranular and/or fracture permeability – meaning they usually provide a high level of water storage. They may support water supply and/or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifer.

There is one BGS recorded borehole located within 100m of the site, a water well advanced in 1895. The details of this are given in Table 4.1b.

Table 4.1b – Historical Borehole Record from Surrounding Area

Borehole Ref.	Location (Easting, Northing)	Details (depth to top of strata/lithology)
SD80SE76	80m east (388241, 400733)	1.52m bgl No Record 12.19m bgl CLAY 19.81m bgl QUICKSAND 23.16m bgl Blue CLAY 33.52m bgl Yellow CLAY 35.25m bgl CLAY and GRAVEL 36.88m bgl Red SANDSTONE 45.72m bgl Red MARL 107.89m bgl Red SANDSTONE 107.89m bgl borehole termination

There are no groundwater abstraction points located within 1km of the site boundary.

The site is not located within a Source Protection Zone.

4.1.1 Mining

The Coal Authority's online interactive mapping (Ref. 4) confirm the site is in a coal mining reporting area, however it is not within a development high risk area or within an area of abandoned mines catalogue. The closest mine entries are approximately 860m north of the site. Coal outcrops and probable workings are mapped approximately 1.3km north and southwest of the site. As such, the risk to the development from coal mine workings is Low and has not been considered further.

The Envirocheck report (Ref. 1) confirms that there are eight recorded BGS mineral sites within 1km of the site. All of these are now ceased and were for opencast mining of clay, shale and sand. The nearest BGS recorded mineral site is located 334m south west of the site and was associated with Mitchell Street Brickworks which extracted clay and shale.

4.1.2 Other Ground Stability Issues

The Envirocheck report (Ref. 1) confirms that there is no hazard to very low risk from the following ground stability hazards on and around the site; running sands, collapsible and compressible ground, shrinking or swelling clay, landslides and ground dissolution.

There is a moderate risk from compressible ground stability hazards on and around the site.

4.1.3 Ground Gas

There is potential for ground gas from twenty historically infilled land (water) within 500m of the site. All the following historically infilled land are associated with the potential fill of streams, river, marsh, pond or dock, unless specified and filled with an unknown material. The following are mapped dating 1848; 1) on site, 2) 76m north, 3) 120m west, 4) 122m north, 5) 215m north, 6) 256m west, 7) 273m north east, 8) 328m west, dating mapped 1894; 9) 41m south east, 10) 43m south, 11) 177m east, dating mapped 1923; 12) 96m north east, 13) 101m north, 14) 147m north east, 15) 431m north, 16) 460m north, 17) 500m south west, dating mapped 1956; 18) 407m north, 19) 428m north and 20) 495m north east.

There are no BGS recorded landfills within 500m of the site, however there is one historical landfill within 250m of the site located 153m south west of the site.

The Envirocheck report (Ref. 1) confirms the site is situated in a lower probability radon area where <1% of homes are above the radon action level. On this basis radon protection measures are not considered necessary in the construction of new dwellings or extensions.

Where the new development incorporates a basement the advice of a specialist Radon assessor must be obtained.

4.2 Hydrology

The nearest surface water feature is the Rochdale Canal 56m to the south of the site. This has a river quality B.

There has been one pollution incident to controlled waters within 500m of the site. This has not been attributed to the site. The incident 293m southwest of the site fell into the Rochdale Canal catchment area, however the receiving water is not given. The cause of the incident is not known. A pollutant was found with the source not determined.

There is one discharge consent within 500m of the site, 418m north, operated by Vidnor Waste (Greater Manchester) Limited for the discharge of other matter-surface water. This is discharged into a freshwater stream/river called Moston Brook.

There are no active surface water abstraction points located within 1km of the site boundary.

5.0 Unexploded Ordnance (UXO) Risk Assessment

Military activities including those conducted as part of both the First and Second World Wars have resulted in a legacy of unexploded ordnance (UXO) being present within the shallow soils of the UK.

UXO result from various sources including both allied (military training) and German (bombing raids) with a guide figure of approximately 10% of all munitions failing to function as designed.

The likelihood of UXO being encountered on a development site is influenced by a number of factors including; the proximity to strategic targets, the nature of the development works being undertaken and evidence of local damage in the post-war periods amongst others. In order to determine the likelihood of UXO being present on a site, a step-wise risk assessment process is followed. This process is outlined within CIRIA C681 Unexploded Ordnance: A Guide for the Construction Industry (Ref. 5).

Risk Mapping for UXO's (Ref. 6) has placed the site in a Moderate Risk area. Moderate risk areas are those that show a bomb density of 11-50 bombs per 1000 acres and may contain WWII targets.

Analysis of historical bomb mapping from the University of Manchester (Ref 9) (*Figure 5.1*) shows the area surrounding the site has no recorded bombs, targets or damaged buildings.

However, when looking at the historical maps from the Envirocheck report (Ref.1) there are two ruins noted approximately 40m south of the site.

No fire bombs (red circles) hit the site or the surrounding area according to the Manchester WWII bomb damage maps. Considering the above and given the demolition of all structures post-war and that the site was occupied throughout the war period, the risk of encountering potential UXO as part of future intrusive works is considered **Low**. As such no Detailed UXO Report is required.

Figure 5.1: Site boundary shown in red.

6.0 Conceptual Site Model & Qualitative Risk Assessment

The conceptual site model (CSM) and Qualitative Risk Assessment (QRA) are presented in the table presented in this section. A diagrammatic CSM is contained within *Appendix A*.

The CSM details the source-pathway-receptor linkages or potential pollutant linkages (PPL) that have been identified for the site. The QRA details the associated level of risk relating to these potential pollutant linkages.

The CSM and QRA concern risk to human health and water environment with additional, more specific risk assessment protocols contained within the main body of this reporting, as detailed in *Section 6.1* below.

The QRA follows the framework outlined within CIRIA C552 (Ref. 7) which is summarised within *Appendix C*.

The 'risk rating' within the QRA refers to the risk that the source, pathway, receptor linkage or PPL is complete. Unless specifically stated it does not necessarily refer to an immediate risk and is intended to be used as a tool to assess the necessity for further assessment/investigation.

6.1 Additional Risk Assessments

The following risk assessments, listed below, are not included within the main CSM and QRA but none-the-less can be of critical importance to the onward development of the site.

- The risk posed by Unexploded Ordnance is discussed and assessed in *Section 5.0*.

Under current health and safety legislation, employers are required to carry out their own appropriate risk assessments and mitigation to protect themselves and their employees, other human receptors and the environment from potential contamination. Such risks must be adequately mitigated by law, specifically the Construction Design Management (CDM) Regulations (2015) (Ref. 8) which require that potential risks to human health and the environment from construction activities are appropriately identified and all necessary steps taken to eliminate / manage that risk. It has been assumed that any future construction works onsite will be undertaken in compliance with these requirements.

- The table below represents the first stage in the land quality risk assessment process: The Qualitative Risk Assessment.
- In order for a development site to be deemed 'suitable for use', the level of risk needs to be brought down to acceptable levels, i.e. low to negligible risk. The purpose of each stage of risk assessment is ultimately to establish, if there is a requirement for additional levels of assessment to be made in order to have sufficient confidence to support a risk characterisation or management decision, e.g. remedial action.

Conceptual Site Model			Qualitative Risk Assessment			Recommended Actions
Source	Pathway(s)	Receptor(s)	Consequence	Likelihood of Occurrence	Risk Rating	
Significant on-site sources of contamination: <ul style="list-style-type: none"> Made Ground of unknown composition from uncontrolled deposition during construction and demolition of housing, unspecified buildings, inns, a school and roads on site. Significant off-site sources of contamination: <ul style="list-style-type: none"> Made Ground of unknown composition from uncontrolled deposition of the construction and demolition of housing, unspecified buildings, Works, Mills and Tramway which was removed. Contamination arising from Dye Works, Electrical Engineering Works and Miner Water Works all located within 100m south of the site 	Direct contact, ingestion, inhalation (dust and vapours)	Site end users	Medium Chronic health risk	Likely Likelihood Given the historical commercial and residential uses of the site, and the general historical use of the wider area it is considered likely that contamination is present within site soils, that could pose a risk to end users.	Moderate	Ground Investigation Including soil sampling GQRA as part of Ground Investigation
	Vertical migration through the superficial soils May occur due to existing service corridors and physical processes including; capillary action and downwards into the natural deposits through infiltration.	Controlled Waters (Groundwater) Bedrock hosts Principal Aquifer Superficial deposits host Secondary Undifferentiated Aquifer.	Medium Pollution of sensitive water resources	Unlikely Possible sources of contamination from historical site activities. Till deposits are likely to reduce risk of migration of contaminants to the Principal Aquifer. The site is not within a Source Protection Zone and there are no groundwater abstractions within 1km of the site.	Low	No further action required.
	Horizontal migration over and through the superficial deposits (soils)	Controlled Waters (Surface water) Nearest surface water feature is the Rochdale Canal located approximately 56m to the south of the site boundary, river quality B.	Medium Pollution of sensitive water resources	Unlikely Migration of contaminants to the nearest surface water feature is considered unlikely given the distance to the receptor. It is also considered that the influence of the industrial land uses of the wider area will have a greater contributing factor to contamination of the Rochdale Canal than contamination arising from this site itself.	Low	No further action required.

Conceptual Site Model			Qualitative Risk Assessment			Recommended Actions
Source	Pathway(s)	Receptor(s)	Consequence	Likelihood of Occurrence	Risk Rating	
Significant sources of ground gas: <ul style="list-style-type: none">Potential ground gas generation from Made Ground or superficial deposits containing organic/putrescible content on site.Historically infilled land on site and within 250m of the site.Historical landfill located 153m south west of the site.	Vertical and horizontal migration through the superficial and bedrock deposits	Site end users	Medium Human health risk	Low Likelihood Made Ground onsite and in the surrounding area is likely to consist of relatively inert demolition waste with a limited amount of putrescible material. Superficial deposits unlikely to contain significant volumes of putrescible material. Distance to historically infilled landfills unlikely to cause any ground gas generation affecting the site, however there is potentially infilled land (water) on and close to the site.	Moderate/Low	Ground Gas Monitoring as part of ground investigation Shallow gas monitoring to assess the risk.

7.0 Conclusion and Recommendations

The qualitative risk assessment (QRA) determined a varied level of risk associated with the proposed development from Low to Moderate.

The QRA concluded by recommending that generic quantitative risk assessments (GQRA) were conducted in order to confirm the assessment of risk ascribed to each of the respective potential pollutant linkages (PPLs). It is recommended that the GQRA is conducted as part of a ground investigation in support of the engineering design of the proposed development an outline scope for which is detailed in the section hereafter.

In summary, the following recommendations are made:

- Undertake an intrusive ground investigation;
- Undertake a GQRA as part of the ground investigation; and
- Undertake Ground Gas Monitoring.

It is further recommended that this work is completed in advance of any development works taking place and could be undertaken in conjunction with a geotechnical investigation.

7.1 Contaminants of Concern

Potential contaminants of concern associated with the sources identified within the Conceptual Site Model in *Section 6.0* of this report include but are not limited to: broad range aliphatic and aromatic hydrocarbons present within any fuel oils; polycyclic aromatic hydrocarbons (PAHs); inorganic compounds including heavy metals; and asbestos present in discarded building materials.

Potential contaminants associated with the air-born dust/particulates include but are not limited to: polycyclic aromatic hydrocarbons and inorganic compounds including toxic metals that are also accounted for by potential onsite contaminants of concern.

7.2 Other Considerations

There may be subsurface obstructions, voids and relic foundations associated with any historic buildings.

The requirement for additional surveys, e.g. arboricultural and ecological surveys, should be confirmed through advice from a suitably qualified and experienced professional

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Published 1975

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local
Published 2019
Source map scale - 1:10,000
VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Lancashire And Furness

Published 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1975 - 1976

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Appendix C – Qualitative Risk Assessment Rationale

The site-specific risk assessment, presented in this report, follows the principle of establishing whether there is a viable linkage between a contaminant source to a potential receptor, via an exposure pathway.

The risk assessment corresponds with the total site area and incorporates both descriptive (qualitative) and, where available, numerical (quantitative) lines of evidence.

Risk assessment is the process of collating known information on a hazard or set of hazards in order to estimate actual or potential risk to receptors. The receptor may be humans, a water resource, a sensitive local ecosystem or future construction materials. Receptors can be connected to the source by one or several exposure pathways such as direct contact for example. Risks are generally managed by isolating the receptor or intercepting the exposure pathway or by isolating or removing the hazard.

Without the three essential components of a source, pathway and receptor there can be no risk. Therefore, the presence of contaminant source on a site does not necessarily mean there is a risk.

The risk assessment considers the likelihood of a particular event taking place (accounting for the presence of the source and receptor and the viability of the exposure pathway) in conjunction with the severity of the potential consequence (accounting for the potential severity of the hazard and the sensitivity of the receptor).

In the risk assessment the consequence of the hazard has been classified as severe or medium or mild or minor and the probability (likelihood) of the circumstances actually occurring classified as high likelihood or likely or low likelihood or unlikely.

The consequences and probabilities are subsequently cross-correlated to give a qualitative estimation of the risk using Department of the Environment risk classifications as detailed in the table below and as referenced in CIRIA C552.

		Consequence			
		Severe	Medium	Mild	Minor
Probability (Likelihood)	High Likelihood	Very High Risk	High Risk	Moderate Risk	Moderate/Low Risk
	Likely	High Risk	Moderate Risk	Moderate/Low Risk	Low Risk
	Low Likelihood	Moderate Risk	Moderate/Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate/Low Risk	Low Risk	Very Low Risk	Very Low Risk

Phase 1 Preliminary Risk Assessment

In accordance with DoE guidance, the following categorisation of **consequence** has been developed.

Classification	Definition	Examples
Severe	Short-term (acute) risk to human health likely to result in "significant harm" as defined by the Environment Protection Act 1990, Part IIA. Short-term risk of pollution of sensitive water resource. Catastrophic damage to buildings/property. A short-term risk to a particular ecosystem or organisation forming part of such ecosystem.	<p>High concentrations of cyanide on the surface of an informal recreation area.</p> <p>Major spillage of contaminants from site into controlled water.</p> <p>Explosion, causing building collapse (can also equate to a short-term human health risk if buildings are occupied).</p>
Medium	Chronic damage to Human Health. Pollution of sensitive water resources. A significant change in a particular ecosystem or organism forming part of such ecosystem.	<p>Concentration of a contaminant from site exceeds the generic or site-specific assessment criteria.</p> <p>Leaching of contaminants from a site to a Principal or Secondary A aquifer.</p> <p>Death of a species within a designated nature reserve.</p> <p>Lesser toxic and asphyxiate effects</p>
Mild	Pollution of non-sensitive water resources. Significant damage to crops, buildings, structures and services. Damage to sensitive buildings/structures/services or the environment.	<p>Pollution of non-classified groundwater (inc. Secondary B aquifers).</p> <p>Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability).</p>
Minor	Harm, although not necessarily significant harm, which may result in a financial loss or expenditure to resolve. Non-permanent health effects to human health (easily prevented by means such as personal protective clothing, etc). Easily repairable effects of damage to buildings, structures and services.	<p>The presence of contaminants at such concentrations that protective equipment is required during site works.</p> <p>The loss of plants in a landscaping scheme.</p> <p>Discoloration of concrete.</p>

Phase 1 Preliminary Risk Assessment

In accordance with DoE guidance, the following categorisation of **probability** has been developed.

Classification	Definition
High Likelihood	There is a pollution linkage and an event that either appears very likely in the short term and almost inevitable over the long term or there is evidence at the receptor of harm or pollution.
Likely	There is a pollution linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.
Low Likelihood	There is a pollution linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	There is a pollution linkage but circumstances are such that it is improbable that an event would occur even in the very long term.

In accordance with DoE guidance, the following categorisation of **risk** has been developed.

Classification	Definition
Very High Risk	There is a <i>high probability</i> that <i>severe harm</i> could arise to a designated receptor from an identified hazard at the site without appropriate further action.
High Risk	<i>Harm is likely to arise</i> to a designated receptor from an identified hazard at the site without appropriate further action.
Moderate Risk	<i>It is possible</i> that without appropriate further action <i>harm could arise</i> to a designated receptor. It is relatively <i>unlikely</i> that any such harm would be <i>severe</i> , and if any harm were to occur it is <i>more likely</i> that such harm would be <i>relatively mild</i> .
Low Risk	<i>It is possible</i> that <i>harm could arise</i> to a designated receptor from an identified hazard. It is <i>likely</i> that, at worst, if any harm was realised any effects would be <i>mild</i> .
Very Low Risk	The presence of an identified hazard does not give rise to the potential to cause harm to a designated receptor.

The term 'risk' in this instance refers to the risk that the source, pathway, receptor linkage for a given source of contamination is complete. It does not refer to immediate risk to individuals or features present on the site from potential contaminants and is intended to be used as a tool to assess the necessity of further investigation.

Our Locations

Birmingham

2 The Wharf
Bridge Street
Birmingham
B1 2JS
T. 0121 643 4694
birmingham@curtins.com

Bristol

Quayside
40-58 Hotwell Road
Bristol
