Design and Access Statement

The proposed works to be carried out within the Greenheys Adult Learning Centre are intended to be mindful of both the historic environment in which the Greenheys Centre exists and the access needs of its users and employees. The proposed alterations have developed in collaboration with MCC's Growth and Development Directorate to abnegate potential damage to the historic fabric of the building. Similarly, they ensure proposed installations mirror the present style and design elements present within the gallery. Accessibility is key to the proposed works, an improved wireless internet broadcast would increase the potential digital and therefore accessible community focused projects and events the gallery is able to host.
