Executive Summary

Appointment	In February 2018, Curtins were instructed to undertake a Phase 1 Preliminary Risk Assessment of the Swan House site in Manchester city centre. The site is centred on NGR 384510, 398850, and covers an area of approximately 0.3Ha. It is understood that redevelopment proposals include '*Demolition of existing buildings on site and construction of residential building (Use Class C3), including amenity space for residents and serviced apartments (Use Class C1), ground floor retail units (Use Classes A1, A2, or A3), new public realm and landscaping, car parking and related highway, access, servicing, engineering and associated works*'.
Current Site Status	The site is currently occupied by a two to three storey commercial building and associated basement. The basement level is vacant, with the ground and first floor occupied by operational warehouses and commercial premises. The existing building is bound by Cable Street to the north; Rochdale Road to the west, Mason Street to the east and Swan Street and several adjoining commercial properties to the south. The site is generally sloping to the southwest and is located within the New Cross Neighbourhood Development Framework.
Site History	From the mid-19th Century to the early 20th Century, Cable Street Mill is present across most of the site with residential properties in the northwest. During WWII, ruins are noted within the general vicinity with buildings disappeared from mapping; potentially due to bomb strikes. In the mid-20th Century to the present day the site has been used as a warehouse. The surroundings comprised mills and iron works (mid-19th to early 20th Century) and in the late 20th Century a garage was noted 10m to the southeast.
Geology	BGS records show an absence of Made Ground (however some is anticipated to be present considering the site history). Superficial deposits are recorded as Glacial Till (sandy, silt, gravelly Clay) underlain by bedrock noted as the Triassic Chester Formation (gravelly, pebbly Sandstone). A BGS recorded borehole 20m northwest indicates Made Ground to depths of 1.83m bgl, underlain by clay, sand and gravel, and bedrock from 17.91m bgl.
Hydrogeology	The site is underlain by a Principal Aquifer associated with the bedrock formation, a Secondary Undifferentiated Aquifer associated with superficial deposits and is not located within a Source Protection Zone. There are no groundwater abstractions located within 500m of the site. The site is located within a zone of high leaching potential and a nitrate vulnerable zone.
Hydrology	The nearest surface water feature is the River Irk located 304m west of the site, flowing northeast to southwest, and of River Quality E. There are no recorded surface water abstraction points recorded within 1km and no pollution incidents have been recorded within 250m of the site within the last 10 years. The site does not lie within an area depicted on the EA Flood Zone maps to be at risk of flooding from rivers or the sea.
Unexploded Ordnance Risk	The site is situated in Manchester City Centre, which is identified as a moderate risk area. A review of available Manchester Bomb Damage mapping indicates bombing ruins and damaged buildings, as well as several fire bombs, in the immediate surroundings of the site. A such, UXO mitigation measures must be put in place for intrusive works. The risk from UXO to construction workers is **Moderate**.
Initial Ground Contamination Assessment	The risk, from Made Ground, posed to site end-users is therefore considered **Moderate/Low**, and the risk posed to groundwater and surface water is **Moderate/Low** and **Very Low**, respectively. The risk posed to end-users from ground generating gases is considered **Moderate/Low**.
Other Considerations	There may be subsurface obstructions, voids and relic foundations associated with the current building onsite. Due to the scale of the proposed buildings, foundations are expected to be piled to varying depths to suit gravitational loads.
Recommendations	The following recommendations are made with regards to further works at the site: 1. UXO mitigation measures for any intrusive works onsite; 2. Undertake an intrusive ground investigation; 3. Undertake a GQRA as part of the ground investigation; and 4. Undertake Ground Gas Monitoring. It is further recommended that this work is completed in advance of any development works taking place.

1.0 Introduction

1.1 Project Background

In February 2018 Curtins were instructed to undertake a Phase 1 Preliminary Risk Assessment of the Swan House site in Manchester city centre.

1.2 Scope of Services

The Phase 1 is intended to provide an overview of the geo-environmental and geotechnical setting of the site, prior to redevelopment as a residential building (Use Class C3), including amenity space for residents and serviced apartments (Use Class C1), ground floor retail units (Use Classes A1, A2, or A3), new public realm and landscaping, car parking and related highway, access, servicing, engineering and associated works. The existing commercial building will be demolished.

The new building is proposed to comprise a single building of three parts, encompassing ground floor, mezzanine and 4, 12 or 31 storeys.

Proposed development drawings are included in *Appendix A*.

Through this overview, the Phase 1 aims to develop both a working conceptual and ground model for the site, as well as present an initial assessment of any risks that could be presented to the development including its intended end users and the wider environment.

Specifically, the Phase 1 provides an initial assessment of the site regarding:

a) Potential contamination of the site strata by historical and or current use;
b) The potential impact on the wider environment by historical and or current use of the site of interest;
c) The potential impact from surrounding land uses and other environmental factors;
d) Potential problems associated with geological features such as faulting, mineral extraction, mining and land instability;
e) The location of apparent sub-surface structures that may affect the proposed redevelopment; and
f) The location of above-surface features that may affect the proposed redevelopment.

2.0 Current Site and Surrounding Area Details

2.1 Site Location and Current Details

Site use, location and description are shown below in *Table 2.1* and *Figure 2.1* on the following page. A site walkover was undertaken by Curtins on 2nd February 2018 and photographs are included in *Appendix B.*

Table 2.1 – *Site Details*

Site Address	Swan Street, Manchester, M4 5JG
NGR	384510, 398850
Area of Site	Approximately 0.25Ha
Current Site Use and Description	A site walkover recorded the following pertinent details: • The existing two to three-storey building on site is operational, with warehouses and commercial premises using the ground and first floor. • The basement is currently vacant, with an internal courtyard where drainage and extraction venting were noted. • Vehicular access to the basement and warehouse loadings bays is from Cable Street on the northern boundary. • It is understood that the basement underlies the majority of the existing building's footprint, not extending to the northern site boundary. • No evidence of contamination was observed apart from some minor staining. • The site is generally sloping to the southwest towards Shudehill Interchange. • New developments are currently under construction opposite the site on Rochdale Road (Angel Gardens) and on Cable Street.

Copyright ©2020 Curtins Consulting Ltd

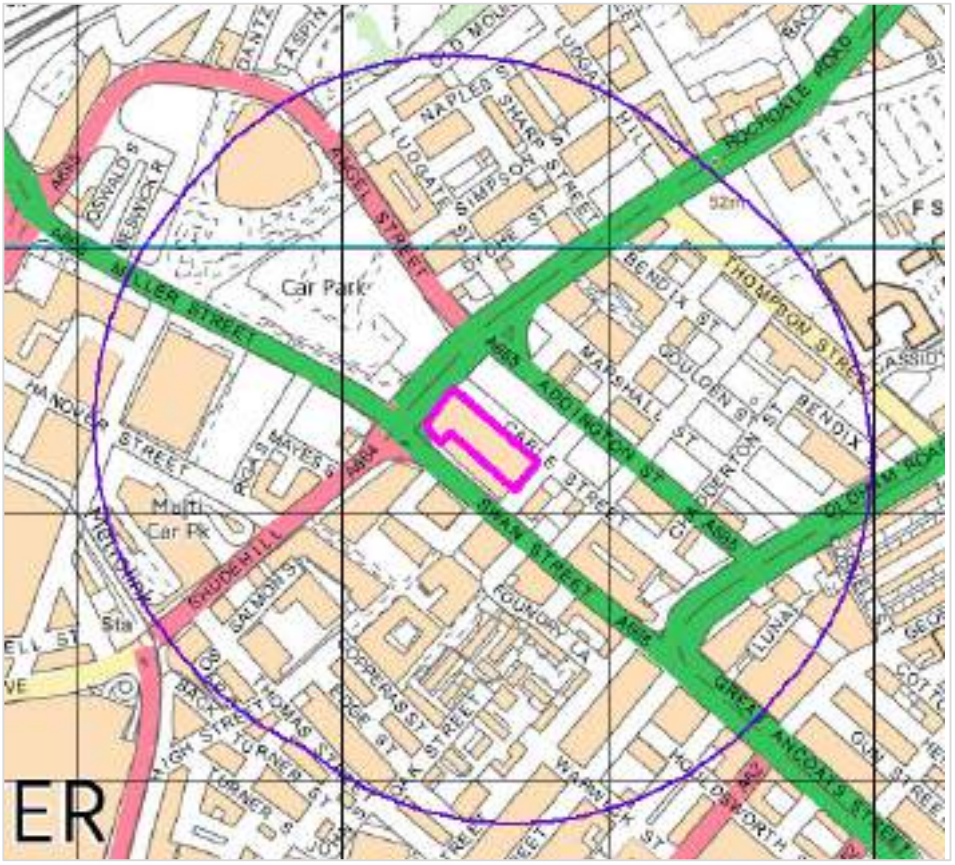

Figure 2.1 – Site Location Plan (site boundary shown in pink and 250m buffer in purple). Crown Copyright. License Number 100022432.

2.2 Surrounding Area Details

The following information was also established during the site visit and through undertaking an environmental database search (Envirocheck report (Ref.1) included in *Appendix C*).

Table 2.2 – *Surrounding Land Uses*

Surrounding Area	**N**	Cable Street with carparking and a new 8 storey development beyond.
	E	Mason Street with car parking and commercial properties.
	W	Rochdale Road with Angel Gardens development beyond.
	S	Adjoining commercial and residential properties.

3.0 Site History

A review of the available historical mapping and other information for the site, as presented within the Envirocheck report (Ref.1), has been undertaken and is presented in *Table 3.0* below.

Table 3.0 – *Previous Site and Surrounding Area Uses and Potential Sources of Contamination*

Date	Description	Potential Sources of Contamination
1850-93	Cable Street Mill is present across most of the site and residential properties in the northwest. Mason Street Saw Mill is 10m to the east, Manchester (cotton) Mill is 100m northwest and Smithfield Market is 70m southwest of the site. Tramways are constructed 20m to the northwest and southeast.	• Potential for contamination associated with mill industry on and adjacent to the site.
1908	Rochdale Road to the northwest is widened towards the site, resulting in properties on this boundary being demolished. Iron Works are located 80m north of the site.	• Limited potential for additional onsite contamination.
1922-27	The Mills and Irons Works are disused or no longer marked. The site is used as a public house, stores, furniture and bedding warehouse and smithy.	• Limited potential for additional onsite contamination.
1948-56	The entire site is noted as warehouse and tramways are no longer present to the northwest and southeast. 1951 mapping shows an extension to the building in the western corner. Offsite ruins are noted 20m southeast, 50m northwest, 70m northwest, 80m west and northeast, and during this period many other buildings disappear to the north, northwest, southeast and east from the maps; potentially due to WWII bombing.	• Uncontrolled deposition of Made Ground from demolition/ construction of buildings onsite. • Potential unexploded ordnance (UXOs) on and surrounding site.
1958-69	Little change on or immediately surrounding the site.	• Limited potential for additional onsite contamination.
1970-94	Smithfield Market and the old Manchester Mill site become carparks, Veritas House, 20m northeast, is demolished and replaced by a carpark. A garage is located 10m southeast.	• Limited potential for additional onsite contamination.
1999-2018	Little change on or immediately surrounding the site.	• Limited potential for additional onsite contamination.

There are no historic or BGS recorded landfills or active Licensed Waste Management Facilities within 500m of the site. Potential sources of onsite contamination are further discussed in *Section 6.0*.

Copyright ©2020 Curtins Consulting Ltd

4.0 Geology, Hydrogeology and Hydrology

4.1 Geology and Hydrogeology

A study of the Envirocheck records, British Geological Survey (BGS) 1:50,000 mapping records (Bedrock and Superficial Editions) for Manchester (Sheet 85) (Ref.2) indicates the following geological and hydrogeological succession underlying the site:

Table 4.1 – *Geological/Hydrogeological Succession*

Geology	Associated Hydrogeological Classification
Made Ground deposits are not indicated to be present, however some are expected due to historical development onsite.	N/A
Glacial Till[1]	Secondary Undifferentiated Aquifer[3]
Chester Pebble Beds Formation[2]	Principal Aquifer[4]

Notes:

1. *These comprise a group of sediments laid down by the direct action of glacial ice, usually sandy, silty clay with pebbles, but can contain gravel-rich, or laminated sand layers; varied in colour and consistency.*
2. *These Early Triassic rocks comprised conglomerates and reddish brown, cross-bedded, pebbly sandstones with subordinate beds of red-brown mudstone, and several such marine fossil-bearing mudstones in the upper half of the unit.*
3. *This is assigned in cases where it has not been possible to attribute either category A or B to a rock type. In most cases, this means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type.*
4. *These are layers of rock or drift deposits that have high intergranular and/or fracture permeability – meaning they usually provide a high level of water storage. They may support water supply and/or river base flow on a strategic scale.*

There are no BGS recorded faults onsite.

The nearest BGS recorded available borehole (Ref.3) is located approximately 20m northwest of the site, details of which are presented within *Table 4.2* below:

Table 4.2 – *BGS Borehole Records*

Record Number	Location (NGR)	Details (depth to top of strata/details)	
SJ89NW28	20m northwest (384457, 398885)	0.00m bgl	MADE GROUND
		1.83m bgl	Silty CLAY
		5.49m bgl	CLAY
		9.14m bgl	Fine SAND
		14.48m bgl	GRAVEL & SAND
		14.94m bgl	CLAY
		16.99m bgl	Red SAND
		17.91m bgl	Red SANDSTONE
		25.91m bgl	*borehole termination*

Copyright ©2020 Curtins Consulting Ltd

The site is located within a zone of high leaching potential and a nitrate vulnerable zone. The site is not situated within a Source Protection Zone (SPZ). There are no groundwater abstractions located within 500m of the site.

4.1.1 Mining

The site is within a coal mining reporting area, however, The Coal Authority Interactive Mapping (Ref.4) confirms the site is approximately 1000m southwest of a coal outcrop and the nearest mine entry is located over 1000m to the northeast. The site is not noted within an area that has been influenced by past or probable shallow coal mine workings. As such, the risk to the development from coal mine workings is Low and has not been considered further.

There are no recorded mineral sites within 500m of the site.

4.1.2 Other Ground Stability Issues

The Envirocheck Report confirms that there is a no hazard to very low risk from the following ground stability hazards on and around the site; collapsible ground, compressible ground, ground dissolution, landslide ground, running sands and shrinking or swelling clay.

4.1.3 Ground Gas

The BGS Radon Mapping (Ref.5) confirms the site is situated in a lower probability radon area where <1% of homes are at or above the radon action level. On this basis, radon protection measures are not considered necessary in the construction of new dwellings or extensions.

As the new development incorporates a basement the advice of a specialist Radon assessor must be obtained.

4.2 Hydrology

The nearest surface water feature is the River Irk 304m west, flowing in a northeast to southwest direction, and is of River Quality E (poor).

No pollution incidents have been recorded within 250m of the site within the last 10 years. There are no surface water abstractions recorded within 1km of the site. There are no discharge consents within 250m of the site.

The site does not lie within an area depicted on the EA Flood Zone maps to be at risk of flooding from rivers of the sea.

5.0 Unexploded Ordnance Risk Assessment

Military activities including those conducted as part of both the First and Second World Wars have resulted in a legacy of unexploded ordnance (UXO) being present within the shallow soils of the UK.

UXO result from various sources including both allied (military training) and German (bombing raids) with a guide figure of approximately 10% of all munitions failing to function as designed.

The likelihood of UXO being encountered on a development site is influenced by several factors including; the proximity to strategic targets, the nature of the development works being undertaken and evidence of local damage in the post-war periods amongst others. To determine the likelihood of UXO being present on a site, a step-wise risk assessment process is followed. This process is outlined within CIRIA C681 Unexploded Ordnance: A Guide for the Construction Industry (Ref.6) with the following commentary considered to represent a Preliminary Risk Assessment intended to guide if and where there is a requirement for a Detailed Risk Assessment.

5.1 Preliminary UXO Assessment

Risk mapping (Ref.7) for UXO's has placed the site in a moderate risk area. Moderate risk areas are those that show a density of bombing hits of 11-50 bombs per 1000 acres and may contain potential WWII targets. Further action may be required to mitigate UXO risk is essential in moderate risk areas.

From the historic mapping, the building currently onsite has been there since before WWII. The historical mapping also records ruins surrounding the site and many other buildings disappear from the historic maps during this period; potentially due to WWII bombing.

Analysis of online historical mapping (Ref.8) shows fire bomb strikes (80m east, 100m southwest and 120m south) and demolished/damaged buildings and ruins (from 20m southeast, from 50m northwest, 70m northwest, 80m west and northeast and 100m south) surrounding the site, as shown in *Figure 5.1* on the following page.

Copyright ©2020 Curtins Consulting Ltd

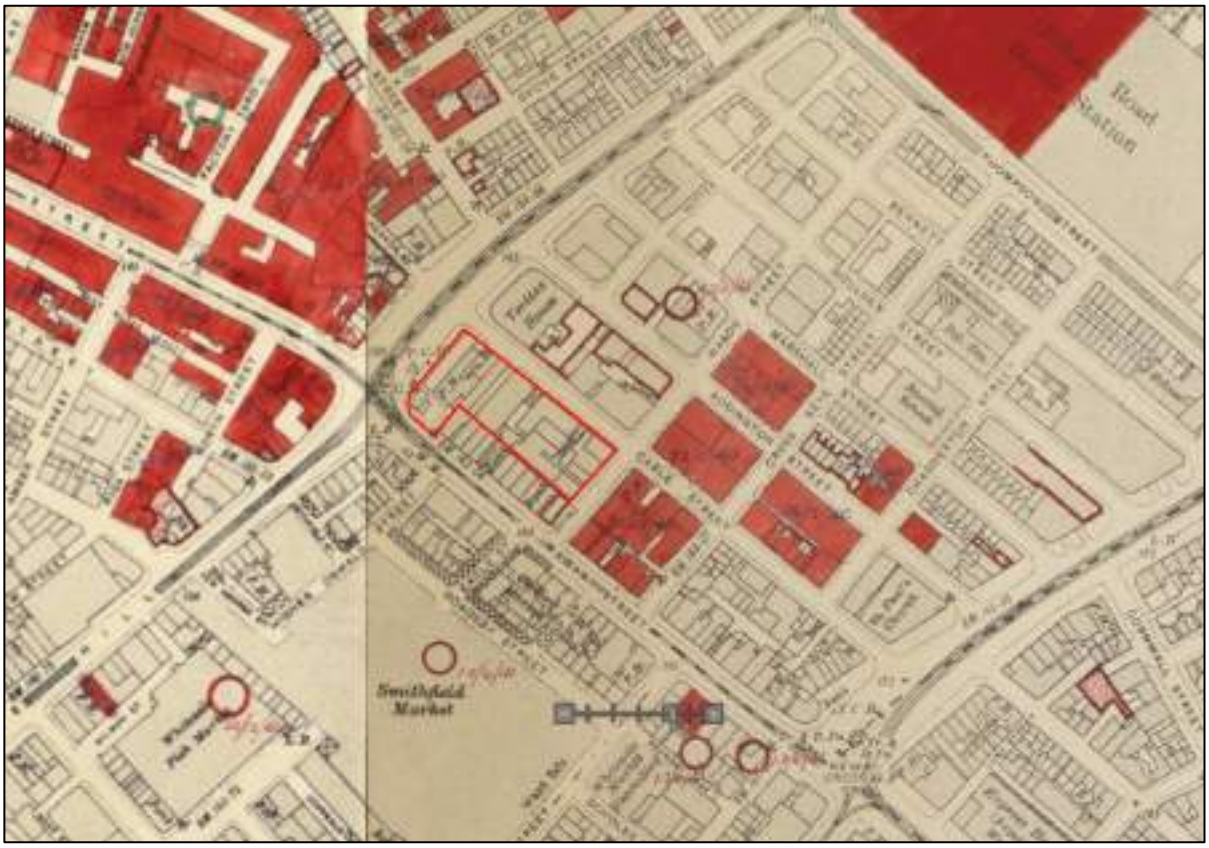

Figure 5.1 – Map of bomb damage in Manchester from WWII (red line shows site boundary, red circles show locations of fire bombs, red shading shows locations of demolished buildings).
Copyright 2016 The University of Manchester.

Based on the forgoing commentary, the likelihood of encountering UXO on site as part of the ground investigation or development works is Moderate, and on this basis, it is recommended that UXO mitigation measures are put in place during intrusive investigation works.

If unexploded ordnance is discovered, stop immediately, prevent access to the area, and inform the police. If the site boundary or location changes then the UXO risk should be reassessed.

6.0 Conceptual Site Model & Qualitative Risk Assessment

The conceptual site model (CSM) and Qualitative Risk Assessment (QRA) are presented in the table within this section. A diagrammatic CSM is contained within *Appendix A*.

The CSM details the source-pathway-receptor linkages or potential pollutant linkages (PPL) that have been identified for the site. The QRA details the associated level of risk relating to these potential pollutant linkages.

The CSM and QRA concern risk to human health and water environment with additional, more specific risk assessment protocols contained within the main body of this reporting, as detailed in *Section 6.1* below.

The QRA follows the framework outlined within CIRIA C552 (Ref.9) which is summarised within *Appendix D.*

The 'risk rating' within the QRA refers to the risk that the source, pathway, receptor linkage or PPL is complete. Unless specifically stated it does not necessarily refer to an immediate risk and is intended to be used as a tool to assess the necessity for further assessment/investigation.

6.1 Additional Risk Assessments

The following risk assessments, listed below, are not included within the main CSM and QRA but nonetheless can be of critical importance to the onward development of the site:

- The risk presented by Mining is discussed and assessed in *Section 4.1.1*.
- The risk presented by Radon is discussed and assessed in *Section 4.1.3*.
- The risk presented by Unexploded Ordnance is discussed and assessed in *Section 5.0*.

Under current health and safety legislation, employers are required to carry out their own appropriate risk assessments and mitigation to protect themselves and their employees, other human receptors and the environment from potential contamination. Such risks must be adequately mitigated by law, specifically the Construction Design Management (CDM) Regulations, 2015 (Ref.10) which require that potential risks to human health and the environment from construction activities are appropriately identified and all necessary steps taken to eliminate / manage that risk. It has been assumed that any future construction works on site will be undertaken in compliance with these requirements and therefore construction workers involved in the building works at the site have been discounted as a human receptor in the conceptual site model.

- The table below represents the first stage in the land quality risk assessment process: The Qualitative Risk Assessment.
- For a development site to be deemed 'suitable for use', the level of risk needs to be brought down to acceptable levels, i.e. low to very low risk. The purpose of each stage of risk assessment is ultimately to establish, if there is a requirement for additional levels of assessment to be made to have sufficient confidence to support a risk characterisation or management decision, e.g. remedial action.
- In the absence of specific site data, a Generic Quantitative Risk Assessment is invariably recommended.

Conceptual Site Model			Qualitative Risk Assessment			Recommended Actions
Source	**Pathway(s)**	**Receptor(s)**	**Consequence**	**Likelihood of Occurrence**	**Risk Rating**	
Made Ground of unknown composition from uncontrolled deposition of construction/ demolition onsite. **Potential contamination** associated with the historic use as a mill.	Direct contact, ingestion, inhalation (dust and vapours)	**End-user of site**	**Medium** Chronic health risk	**Low** Considering the sites historical use, it is considered low likelihood that contamination will be encountered.	**Moderate/ Low**	**Generic Quantitative Risk Assessment** Recommended as part of the ground investigation.
	Vertical migration through the superficial deposits (soils) May occur due to existing service corridors and physical processes including; capillary action and downwards into the natural deposits through infiltration.	**Controlled Waters** (groundwater) Principal Aquifer (bedrock) & Secondary Undifferentiated Aquifer (superficial deposits). No groundwater abstraction points within 500m and the site is not within a designated Source Protection Zone.	**Medium** Pollution of sensitive water resources	**Low** Considering the sites historical use, it is considered low likelihood that contamination will be encountered. Migration could occur into the underlying Principal Aquifer.	**Moderate/ Low**	
	Horizontal migration over and through the superficial deposits (soils)	**Controlled Waters** (surface water) Nearest surface water course is River Irk 304m west of the site. No surface water abstraction points within 1km.	**Mild** Pollution of low sensitivity water resources	**Unlikely** Considering the distance from the site to the nearest surface water receptor, this pathway is considered unlikely.	**Very Low**	No further action required.
Production of ground generating gases from Made Ground deposits containing organic/ putrescible content.	Vertical and horizontal migration through existing service corridors and the underlying superficial deposits	**End-user of site**	**Medium** Human health risk	**Low** Considering the site history, the likelihood of encountering ground gases is considered low. With reference to BS8576:2013 (Ref.11), these sources are considered to have a Very Low to Low gassing potential.	**Moderate/ Low**	**Generic Quantitative Risk Assessment** Recommended as part of the ground investigation.

Copyright ©2020 Curtins Consulting Ltd

7.0 Conclusion and Recommendations

The qualitative risk assessment (QRA) determined a varied level of level of risk associated with the proposed development.

The QRA concluded by recommending that generic quantitative risk assessments (GQRA) were conducted to confirm the assessment of risk ascribed to each of the respective potential pollutant linkages (PPLs). It is recommended that the GQRA is conducted as part of a ground investigation in support of the engineering design of the proposed development.

In summary, the following recommendations are made:

- UXO mitigation measures for any intrusive works onsite;
- Undertake an intrusive ground investigation;
- Undertake a GQRA as part of the ground investigation; and
- Undertake ground gas monitoring.

It is further recommended that the site investigation works are completed in advance of any development works taking place.

7.1 Contaminants of Concern

Potential contaminants of concern associated with the sources identified within the Conceptual Site Model in *Section 6.0* of this reporting include but are not limited to: broad range aliphatic and aromatic hydrocarbons present within any fuel oils; polycyclic aromatic hydrocarbons (PAHs); inorganic compounds including heavy metals; and asbestos present in discarded building materials.

Potential contaminants associated with the airborne dust/particulates include but are not limited to: polycyclic aromatic hydrocarbons and inorganic compounds including toxic metals that are also accounted for by potential onsite contaminants of concern.

7.2 Other Considerations

There may be subsurface obstructions, voids and relic foundations associated with the current building onsite. Due to the scale of the proposed buildings, foundations are expected to be piled to varying depths to suit gravitational loads.

The requirement for additional surveys, e.g. arboricultural and ecological surveys, should be confirmed through advice from a suitably qualified and experienced professional.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.
The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

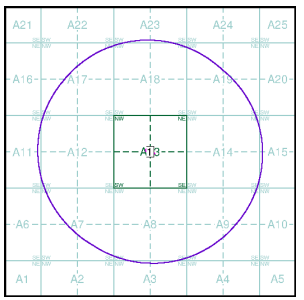

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

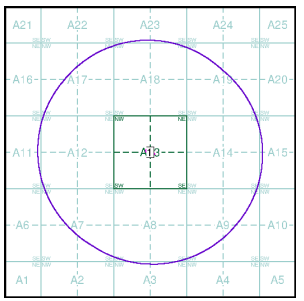

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

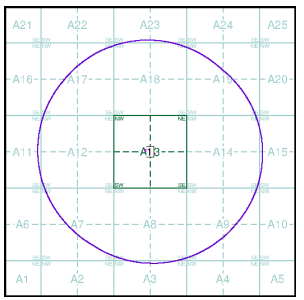

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.
