

Introducing the Future.

The smartest way to charge.

Hypervolt Home 2.0 7 kW AC Smart Charger

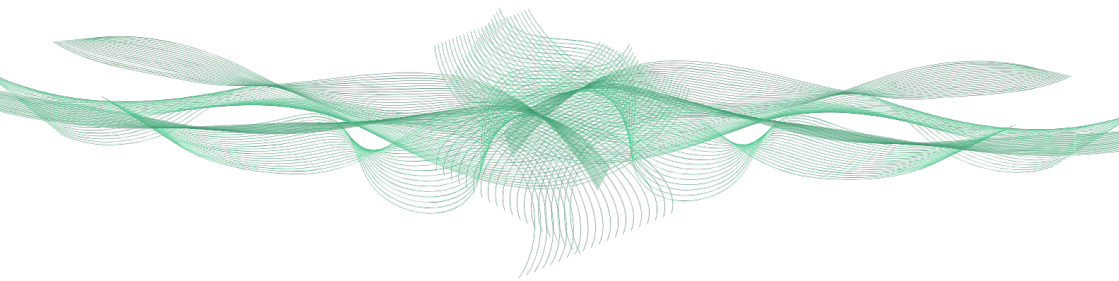

Proudly designed and manufactured in Britain

Hello.

The Hypervolt Home 2.0 is the latest in Hypervolt's new generation of smart chargers, bringing home charging to a new level.

The future is electric, and we believe charging should be **economical**, **easy**, **ecological** and **smart**.

Save, charge and change the world with Hypervolt.

Economical

Luxury without the premium – we believe the future is for everyone, and have developed a beautiful and advanced charger for a competitive price.

Smart charging – Hypervolt is compatible with all available EV tariffs, letting you charge intelligently to minimise costs.

OZEV certified – Hypervolt is eligible for the OZEV grant. You could save £350 when you buy (plus an additional £300-£400 off if you live in Scotland).

Easy

As fast as it gets - Hypervolt charges at the maximum possible speed for UK homes, giving you up to 30 miles of range per hour, 3x faster than using a standard 13A plug socket.

User-friendly, one-click control - Stopping, starting and scheduling your charging is just as easy using the Hypervolt dashboard.

Universal vehicle compatibility - Hypervolt works with all main electric vehicle brands in Europe¹. We help you select the right charge connector for you.

¹ The only charge port we do not support is ChaDeMo, though most cars with ChaDeMo also have a second charge port (either Type 1 or Type 2) that Hypervolt can connect to. We also sell type 1 - 2 plug adapters.

Smart

Anytime, anywhere – Schedule, monitor and control your charging online with any device.

Over-the-air automatic updates – We keep your software up to date and ahead of the curve for free, for life.

LED responsiveness – Hypervolt's unique LED glow signals your charging mode. You can customise your LEDs through your dashboard.

Ecological

HyperGreen – Hypervolt uses forecasts and algorithms to match your grid charging to the lowest carbon times, typically saving 25% CO₂ compared to other chargers.

Solar charging² – Hypervolt Pro 2.0 charges your car directly from your solar panels so you can drive with clean, free, home-grown solar miles.

Support a clean energy revolution – Cloud-connected local networks of our Hypervolt community are helping the country switch to clean energy. You may be eligible for discounts and rewards.

² Available 2021

Hypervolt has a compact, elegant, wall-mounted design.

Technical Summary

7kW AC

Type 1 & 2 connectors

5m tethered cable (7.5m optional)

1 charge connector (holster optional)

Wall mounted

App for monitoring and smart charging

EV tariff compatible

WiFi / 4G connected

3 year warranty (5 year optional)

£50 Cashback

If you have a friend who has an EV, or a trusted favourite electrician, we would love to meet them.

We will give you and your friend £25 cashback each when a friend or electrician you refer buys a Hypervolt.

Thank you for being a brand ambassador.

Getting the OZEV Grant

The Hypervolt Home smart charger is approved by the Office for Zero Emission Vehicles, eligible for grants to reduce the price you pay by up to £350 (England and Wales) or up to £650-750 (Scotland only). To be eligible for the grants:

- ✓ You have your own off-street parking (whether rented or owned accommodation)
- ✓ You purchased your car on or after 1st October 2016.
- ✓ You use an OZEV approved installer, including Hypervolt-affiliated installers.
- ✓ Your vehicle is full battery electric or plug-in hybrid with CO₂ emissions lower than 50g per km.
- ✓ You claim one charger grant per vehicle.

What Our Customers Say...

Great kit, excellent installation, top service.

I am now the very happy recipient of a Hypervolt car charger, installed this week. The team were incredible, polite and very professional. The installation itself was done beautifully – with the cabling under my laminate floorboards, so no disturbance to the walls or floor. The actual charger looks phenomenal and now the car is charged in a few hours. Could not be happier!

Martin S.

Really happy and has a handy app!

Really happy and has a handy app, great installation team, unit looks nice too especially at night with the lights, much better than my previous unit quicker charge too, run off WiFi or 4g option! With good monthly rates if can't afford the initial setup (which isn't so bad after the government grant!)

Sam D.

Love my new charger!

Love my new charger, smooth and well designed also very easy to use. Very fast and easy installation. Works really well with my new Tesla model 3. Thank you!

Ondrej M.

Quick install – working well!

Had a great install of our new Hypervolt a few weeks ago and all working well. Very quick install and polite, friendly electrician who was very knowledgeable of the product and made me feel totally comfortable that all was well installed and tested. Kids loving the lights in the evening.

Katie C.

Good start of a good product.

I have installed Hypervolt Home EV Charger a few months ago. Despite the fact that this is a newcomer in the market of home charging, the presentation was made very professionally. The specs are good. I was convinced to try. The installation was done by an excellent and very competent engineer. The equipment has been working well. No problems at all. Highly recommend!

Yu P.

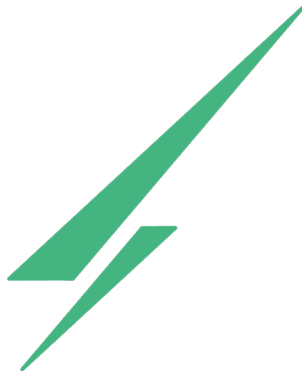

Good product and technical support!

As an installer and end user of the product we have been very happy. Their products are very easy to install, much easier to fit than other manufactures we have previously used. I like to know every detail about products I plan to install, I received great technical support and they were able to answer my most difficult questions. Looking forward to updated features.

Paul
