Bird and bat box locations specified by Arbtech

Bat box, Stretcher bond brick fronted

Bat box, Stretcher bond brick fronted

These bat boxes are best positioned in sunlit clusters, at a height of 3-6 metres and ideally facing a variety of aspects as bats will move around a building as the seasons change.

This product makes an ideal bat house for most of the UK's bat species, including Pipistrelles, who will use it for roosting, hibernating and (in maternity roosts) bringing up their young. The entrance hole and internal design can be tailored to suit different species of bat e.g. Bechstein's and Serotine.
The box is self-cleaning thanks to an internal tilt board at the base; this works by diverting droppings out of the entrance hole. The back of each box is lined with wood; in front of this sits a removable untreated sawn timber baffle board which divides the main area into two, giving extra roosting space.
The bat boxes are supplied with a non-removable front as standard, as access is only permitted by licensed bat workers. Should removable fronts be required, please let us know at the point of order.

Indicative locations shown by red dots

Standard nest box, stretcher bond brick fronted

Bird box, *Stretcher bond brick fronted*

Standard nesting boxes are suitable for House Sparrows and members of the Tit family. The single entrance hole allows the entire internal area to be available for nesting and roosting. The aperture size will vary according to the target species and box fronts can be removable if required.
