# 1. INTRODUCTION

## 1.1 Appointment

Carley Daines & Partners has been commissioned by Great Places Housing Group to undertake a Phase 1 Preliminary Risk Assessment on the proposed development of land at Downley Drive, Manchester. The report is intended to support a Planning Application for proposed re-development.

## 1.2 Proposed Development

Preliminary plans that have been made available to us but the assumed proposal for the site is for development as housing, with associated access road, drainage, and parking infrastructure.

## 1.3 Objectives of Report

The objectives of this report are to identify any potential constraints to the proposed re-development with respect to contaminated land and previous land use. The report will facilitate the design of future geotechnical and environmental ground investigations of the site and will support a Planning Application for the proposed re-development.

## 1.4 Scope of Report

The scope of activities included in the production of this study are:

- Purchase and assessment of geo-environmental information
- Assessment of historical and current mapping
- Production of a preliminary conceptual site model
- Recommendations for intrusive ground investigation

## 1.5 Previous Investigations

No previous investigations have been undertaken on the site to the best of our knowledge. If they have, they have not been made available to us.

## 1.6 Sources of Information

The following sources of information have been used in the compilation of this report;

- Ordnance Survey Maps at various scales
- Site Specific Environmental Information
- Historical mapping provided by Envirocheck

## 2. SITE LOCATION AND DESCRIPTION

### 2.1 Site Location

The site location and description are summarised in Table 1 below.

| Table 1 – Site Description | | |
|---|---|---|
| **Site Location** | The site is located within the Ancoats/New Islington area of Manchester, approximately 1km east of Manchester City centre. | |
| **Site Description** | The site is trapezoidal in shape, with maximum dimensions of approximately 150m in the northeast-west direction, and 25-50m in the northwest-southeast direction. The site is predominantly surrounded by residential development with residential apartments to the north west of the site, low rise accommodation to the southwest, southeast and east of the site and to the North is the Rochdale canal. | |
| **Grid Reference** | NGR 85345,98731 | |
| **Site Area** | 8600m$^2$ (0.86 hectares). The mean site level is approx. 49m AOD. | |
| **Site Setting / Description** | Current land use: | The site is presently unoccupied and split by a path from the end of Downley Drive to the Rochdale Canal. From the site photographs it is clear the site to the south side of the path was formerly developed, potentially as housing, but to the North this is potentially undeveloped. |
| | Surrounding area: | The site is situated within the suburbs of Manchester. Therefore, the surrounding area is primarily residential. More locally, however, directly to the North is the Rochdale canal, beyond which lies further residential development. 350m to the south lies Ancoats Retail Park - a large retail development, now closed. |

Site location and site layout plans are presented in Appendix A.

## 2.2 Site History

This study has been based upon published plans at a scale of 1:10,560 (1:10,000) and 1:2,500.

Earliest published plans are from the Lancashire & Furness Series and are dated 1848. At this time the site is shown as undeveloped and situated in an area surrounded predominantly by residential dwellings and industrial works. There is also an industrial building directly to the south of the site. Mills and factories are prevalent to the west of the site on the other side of Rochdale Canal which exists to the north of the site. The site is located generally in built up surroundings.

Plans from 1893 show a steel works to the centre of the site and residential properties to the south of the site. There has been an increase in residential development beyond 500m of the site, particularly to the north, north east and south east where significant areas of housing have been built. Also, by this time Ducie sawmills have been constructed to the north of the site.

By 1908 the on site steelworks have been replaced with 'St Vincents Home' but otherwise there is little change to the site and its surrounding area. Also, there is a tramway on Bradford Street/New Islington to the south.

Few changes were made between 1908 and 1922 but by 1948/1949 New Islington works had replaced the residential properties to the south west of the site and some on the on site residential properties in the southern section were no longer present. Also, a wire works is now shown on site.

Between 1958 and 1980 residential dwellings were added on site to the north east corner. Also, during this time, the Ducie sawmills to the north of the site were removed. The houses on site to the south side were also removed in this period.

By 1988/1989 all the on site industrial works had been removed and all that remained on site were the houses to the north east corner.

By 2006, the industrial works identified adjacent (to the left) of the site had been removed.

Between 2006 and 2016 the remaining residential properties on site, to the north, had been removed.

| Table 2 – On-Site History | | |
|---|---|---|
| **Potentially Contaminative Past Uses** | Map Date | |
| | From | To |
| Steel/Wire works | 1893 | 1988 |

| Table 3 – Off Site History (250metres) | | |
|---|---|---|
| **Potentially Contaminative Past Uses** | Map Date | |
| | From | To |
| Engineering Works | 1893 | 2006 |
| Sawmill | 1893 | 1980 |

There is evidence to suggest that the site could have been subject to levels of contamination arising from the use of the site for engineering and wire works.

Immediately off-site, there has been a significant amount of past industrial development which is a potential source of contamination. Specifically, the presence of the sawmills, timber yards, engineering works, builders works, mills, etc. could all leave residual contamination, though this would be expected to diminish with increasing distance from the site.

## 3. ENVIRONMENTAL INFORMATION

In compiling this section, environmental, geological and other reports produced by Envirocheck were reviewed. Copies of these reports are presented in Appendix B. A summary of the environmental setting is provided in Table 4 below.

| Table 4 – Summary of Environmental Information | |
|---|---|
| **Made Ground** | There is no obvious made ground on site. However, there is a large area of infilled ground shown 450m east of the site to the former works where houses are now situated. There is an also made ground 300m to the north of the site where former works were also located. |
| **Drift Geology** | **On Site:** This is indicated as Devensian Till. |
| | **Off Site:** Indicated as Devensian Till. |
| **Solid Geology** | **On Site: Both the** Rocks of the Manchester Marls formation and the Collyhurst Sandstone Formation. |
| | **Off Site:** Rocks of the Manchester MArls Formation, the Collyhurst Sandstone Formation, and the Etruria Formation (sandstone and mudstone). |
| **Faults** | There is a discontinuous fault line approximately 100m to the north of the site. |
| **Hydrology** | There are no watercourses on site. The nearest watercourse is the Rochdale Canal, 10m to the North of the site. |
| **Hydrogeology** | The site is above a Principal Aquifer (Collyhurst Sandstone). |
| **Water Abstractions** | None within 500m. A significant number over 1300m away. |
| **Source Protection Zones** | None. |
| **Flood Risk** | The site is not at risk of flooding from Rivers, the Sea, or surface water, and does not lie within a flood risk zone. |

| | |
|---|---|
| **Environmental Incidents** | None. |
| **Mineral and Coal Extraction** | The Coal Authority Report indicates that the site has been affected by past coal mining at significant depth from 330m to 1090m. There is no indication of shallow workings affecting the site |
| **Brine Compensation** | The site is not within a known brine compensation area. |
| **Radon Gas** | The property is in a Lower probability radon area (less than 1% of homes are estimated to be at or above the Action Level). No radon protective measures are necessary in the construction of new dwellings. |
| **Hazardous Installations** | There are no obvious hazardous installations within 500m of the site. |
| **Potentially Contaminative Land Uses** | There are no indicated contaminative land uses within 250m of the site. |
| **Shrinking/Swelling of Clay** | Very low risk. |
| **Landslip** | Very low risk |
| **Running Sands** | Very low risk. |
| **Compressible Deposits** | No risk. |
| **Collapsible Deposits** | Very low risk. |
| **Soil Chemistry** | Data has been obtained for a variety of potential contaminants, specifically arsenic, cadmium, chromium, lead and nickel. The data supplied indicates that there is relatively low risk of significant concentrations of these potential contaminants. However, there may be localised exceedencies that are unrecorded. |

## 4. ENVIRONMENTAL RISK ASSESSMENT

### 4.1 Preliminary Conceptual Site Model

A conceptual site model (CSM), which supports the identification and assessment of contamination-pathway-receptor pollutant linkages, is integral to the overall process of risk assessment. A CSM provides a foundation for hazard identification and risk estimation. For a risk to be present, all three components of an identified pollutant linkage must be present. The potential risks have been assessed with respect to the most sensitive land use, which is deemed to be residential, with plant and vegetable uptake.

Risk estimation is based upon consideration of magnitude, probability, and consequence of a contaminant-pathway-receptor linkage occurring. This is in line with best practice and guidance described in LCRM guidance.

#### 4.1.1 Possible Sources of Contamination

**On Site**

There is potential for contamination arising from the site's previous uses specifically the former steel, wire and engineering works. Also, the possibility of asbestos being present in the relatively old structures on site cannot be ruled out.

**Off site**

There is a potential source of contamination which would be associated with the site's neighbouring previous industrial buildings. This would suggest that there may be contaminants such as hydrocarbons from oil and fuel spillages, plus metals etc. from the nearby industrial units, however these levels are considered unlikely to be significant. The area of infilled ground to the north east of the site is similarly not considered to have a significant effect on the site due to distance from site and the nature of the material present.

### 4.1.2 Possible Pathways

In our assessment of potential exposure pathways, we have identified a residential land use scenario as housing is proposed. The potential exposure pathways identified are:

- Ingestion of soil and dust;
- Dermal contact with soil and dust;
- Inhalation of dust (on and off site);
- Inhalation of outdoor vapours;
- Inhalation of indoor vapours;
- Migration of mobile contaminants in groundwater.

### 4.1.3 Potential Receptors

With respect to the proposed development for residential usage, the following potential receptors are considered:

- Site users (residents and visitors);
- Future site users;
- Construction workers;
- Site structures & infrastructure;
- Drinking water supplies;
- Principal Aquifer.

A summary of the potential pollutant linkages is presented as a CSM in the following Table 5.

| Table 5 - Conceptual Site Model | | | | |
|---|---|---|---|---|
| Potential Source | Potential Pathways | Potential Receptor | Comments | Risk |
| On-site contamination (Heavy Metals, PAHs, TPH, Asbestos & pH) | Ingestion<br>Dermal Contact<br>Inhalation | Human Health - Site Users, Maintenance Staff, Contractors | Possible risk of residual ground contamination due to previous industrial usage of site. | High |
| | Direct Contact | On-site structures, Water pipes | | |
| | Migration of contamination to groundwater | Local Water Courses, Underlying Aquifer | Contamination migration to the Principal Aquifer & Rochdale Canal | High |
| Off-site contamination | Ingestion<br>Dermal Contact<br>Inhalation | Human Health - Site Users<br>Maintenance Staff<br>Contractors | Possible risk of residual ground contamination as there has been significant industry historically in the area. | Moderate to High |
| | Direct Contact | On-site Structures<br>Water Pipes | | |
| | Migration of contamination to groundwater | Underlying Aquifer | Contamination migration to the Principal Aquifer & Rochdale Canal | High |
| Ground gas from nearby landfill sites | Migration through permeable strata | Human Health, On-site Structures | There are areas of landfill around the site within 500m. | Moderate |
| Coal Mining | Workings close to surface | Buildings, roads & services | No recorded shallow workings affecting the site | Very Low |

## 5. SUMMARY & CONCLUSIONS

### 5.1 Conclusions

Carley Daines and Partners have been commissioned by Great Places Housing Group to undertake a Preliminary Risk Assessment for possible future re-development of the site at Downley Drive, Manchester, M4 7JU.

The purpose of the report is to identify possible constraints to the proposed development, and to provide appropriate information to form part of any future planning submission. Based upon an assessment of the available information and development of the conceptual site model, it is considered likely that potential pollution linkages are relevant to the site which require further investigation and assessment. In addition to identified sources (former on site Engineering works, as well as relatively nearby sawmills/yards and other industrial works) there may be minor localised areas of contamination present as a result of unidentified uses of the site. Therefore, the overall assessment at this stage is that the risk of significant contamination being present on site is regarded as being moderate to high.

### 5.2 Recommendations

**In-Ground Contamination**

An intrusive ground investigation is recommended to interrogate the potential pollutant linkages that have been identified. The purpose of the site investigation would be to provide sufficient data to enable a robust site specific Risk Assessment and to identify potential remedial requirements and to enable an appropriate waste disposal management strategy to be drawn up. In addition, the ground investigation should include a geotechnical assessment to confirm the ground conditions with respect to appropriate foundation design.

It is recommended that the ground investigation comprises a series of boreholes and trial pits targeted to the sources of contamination identified in this report across the site to provide site wide coverage. Specifically, sampling and testing for heavy metals, TPH and PAH should be undertaken as well as screening for asbestos. This should be sufficient to confirm or otherwise the presence of contamination levels on site.

**Ground Gases**

As no potential sources of gas (landfills, infilled ground) existing within 250m of site gas monitoring is not required.

**Post Script – November 2023**

A Phase 2 Site Investigation has already been carried out but deemed inadequate by Regulators. As a result, this will be withdrawn pending further investigations specifically comprising the following:

- Additional soil sampling and testing specifically relating to former site use and activities
- Groundwater testing
- Deep drilling across the site to determine the depth and thickness of the impermeable clay layer.

Finally, notwithstanding the comments above regarding ground gases, monitoring was carried out and confirmed that no ground gas protection measures are required as set out in CD&P Ground Gas Report dated 9th March 2021.

**Introduction**

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

**Historical Building Plans Information**

This data set contains potentially contaminative features such as asbestos, petrol, oil and tanks captured from Historical Building Plans. The Historical Building Plans were produced by the London-based firm Charles E. Goad Ltd. as fire insurance plans, dating back to 1885. The firm ceased production of fire insurance plans in 1970. Most of the important towns and cities of the British Isles are covered. Historical Building Plans are usually at the scales of 1:480 (1 inch to 40 feet) for the British Isles. They were updated every 5-6 years by means of revision sheets designed to be pasted on to the original plans.

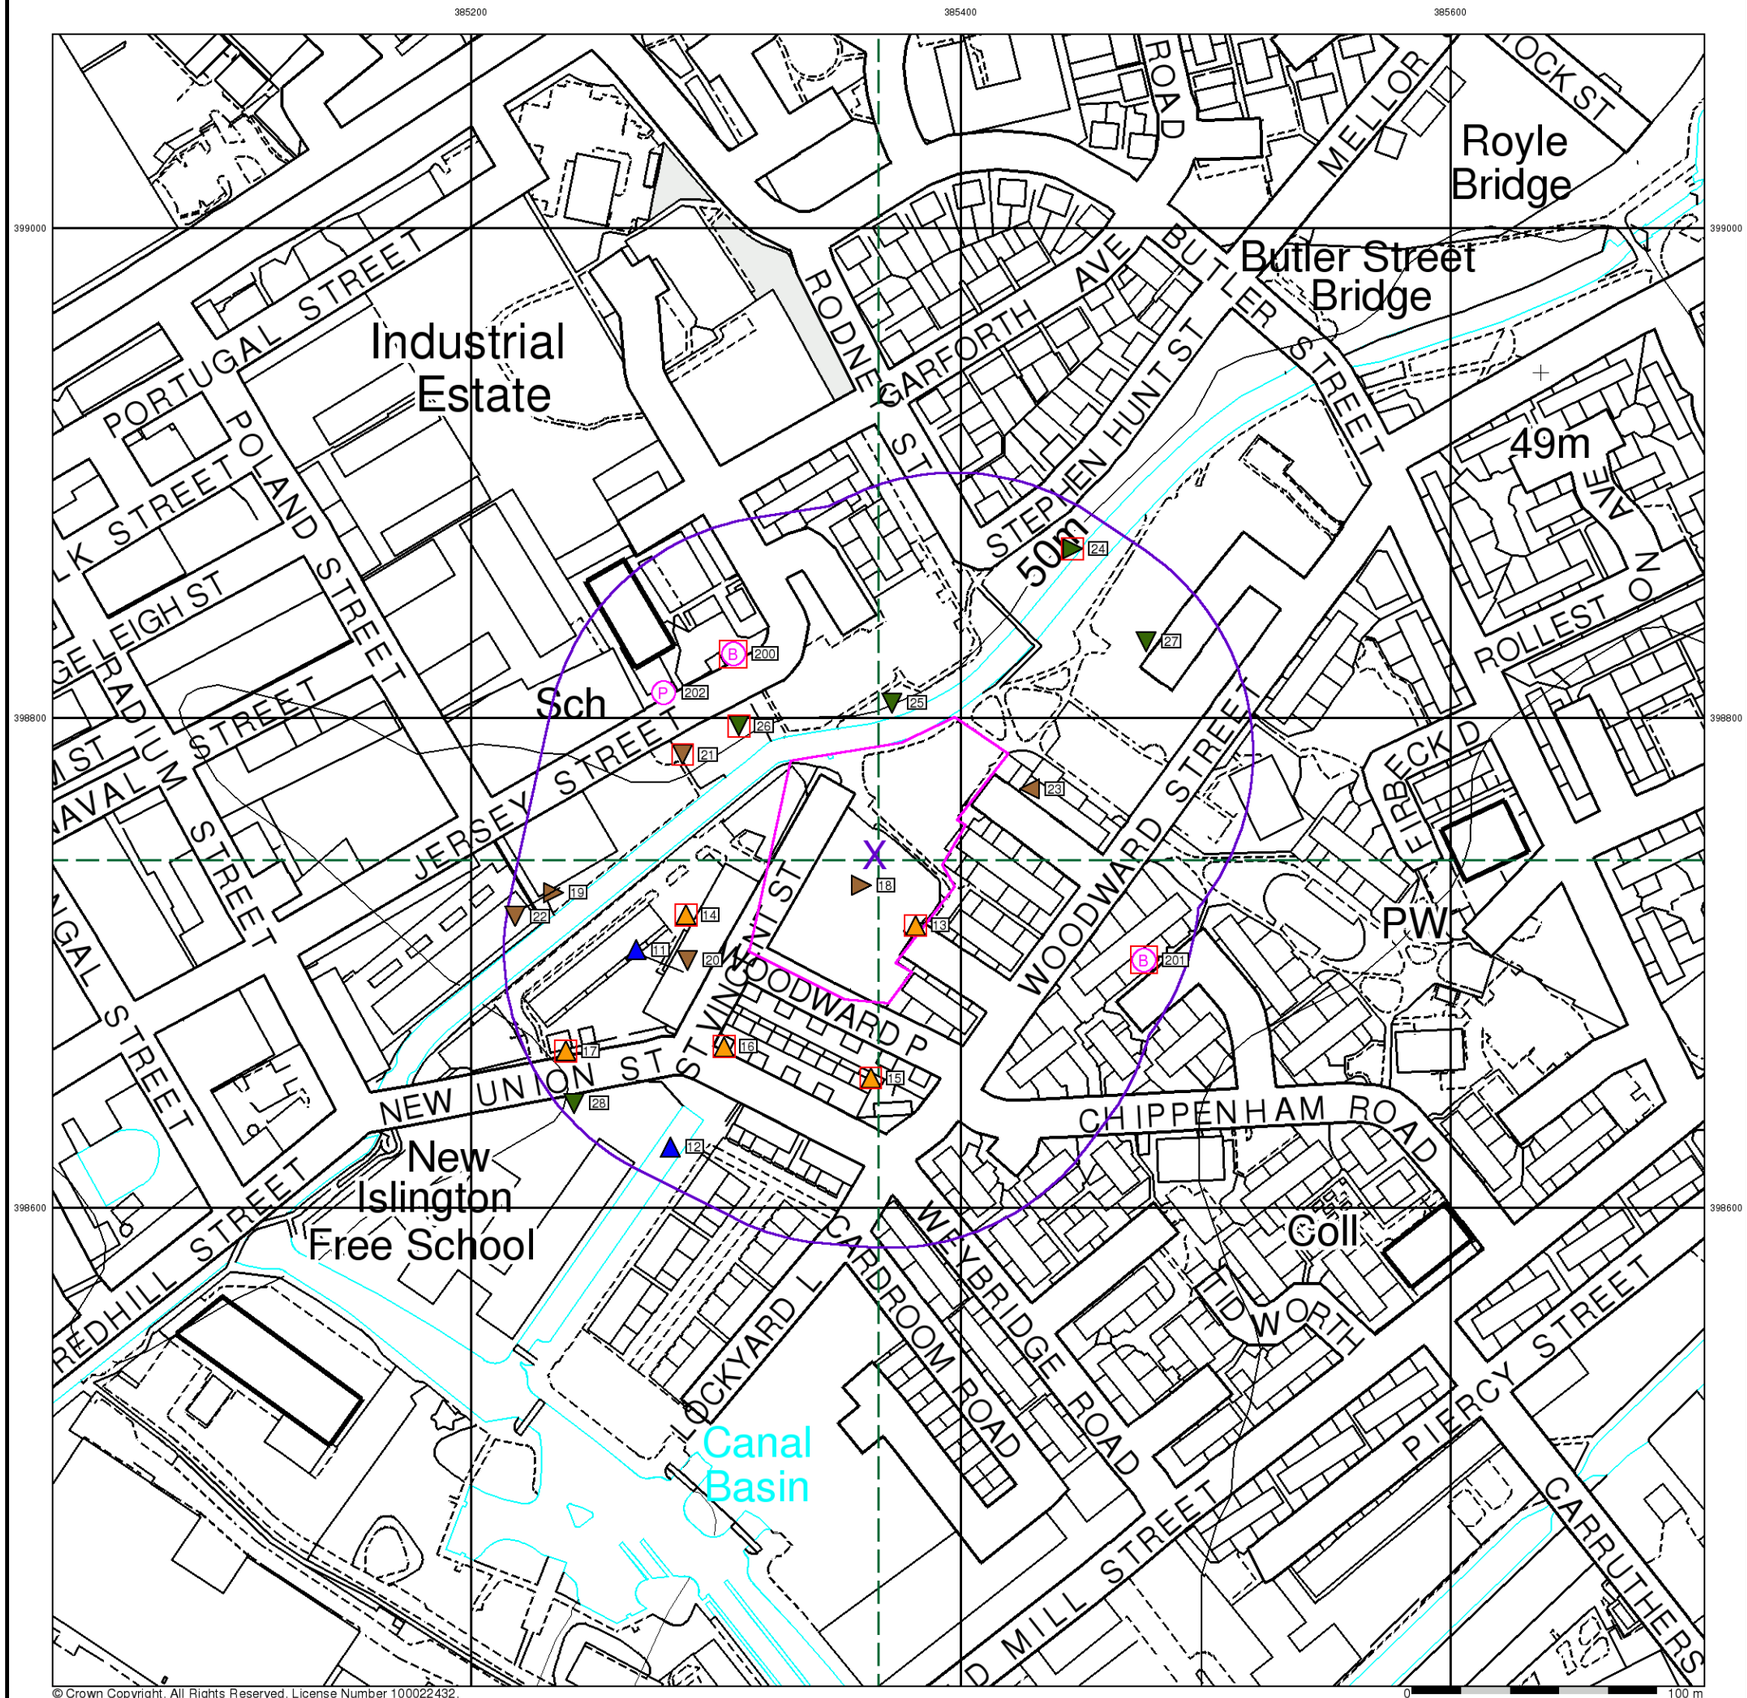

It should be noted that Historical Building Plans are only available for certain major towns and cities and in some cases there may only be partial coverage of the search area. It cannot therefore be assumed that the absence of responses under the Historical Building Plans section of this report indicates that no hazards exist. Please check the Historical Building Plans Map List table in the Historical Map List section of this report to establish if Historical Building Plans are available for this search area.

**Historical Land Use Information**

Landmark's Historical Land Use Data is the result of combined analysis of historical map data captured at 1:10,560 and 1:10,000. A unique comprehensive database of Historic Land Use from the 1840's to 1996 it includes 67 different types of potentially contaminated past industrial land use. This entailed analysing over 60,000 maps and is drawn from at least four, and up to six historical map editions. In addition a seventh layer was also created, known as the land use layer, containing areas of infilled land which are plotted via comparison between two or more map editions.

**Historical Tanks and Energy Facilities**

In addition to HLUD, additional analysis uncovered some of the most dangerous sources of contamination (past and present tanks, petrol storage, oil, gas, electricity, miscellaneous facilities). This data set covers over 390,000 Historical Tanks and Energy facilities in Great Britain and was captured from post war 1:2500 and 1:1250 Ordnance Survey historical mapping covering a period from 1943 to 1996.

## Lancashire And Furness

## Published 1848

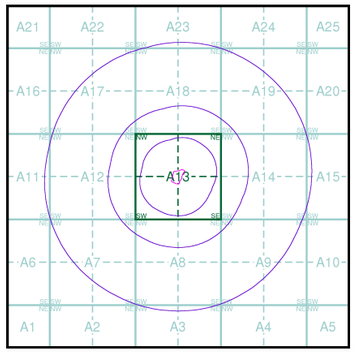

## Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## Manchester

**Published 1975**

**Source map scale - 1:25,000**

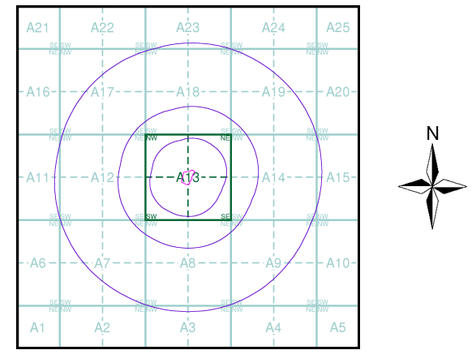

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## Ordnance Survey Plan

### Published 1990 - 1994

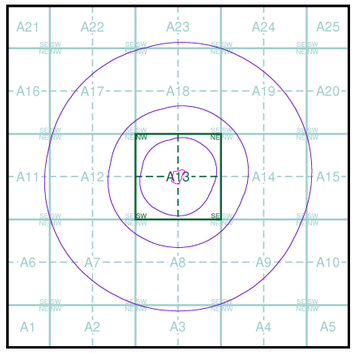

### Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## 10k Raster Mapping

**Published 1999**

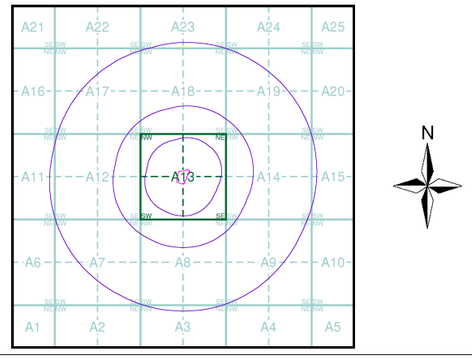

**Source map scale - 1:10,000**

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

## VectorMap Local

**Published 2019**

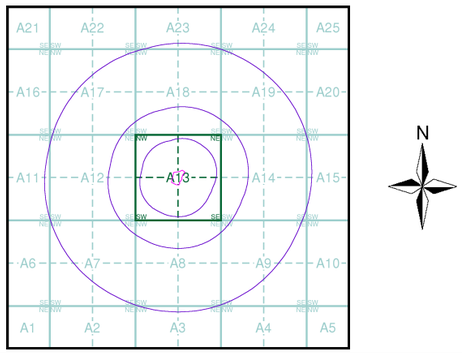

**Source map scale - 1:10,000**

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

## Lancashire And Furness

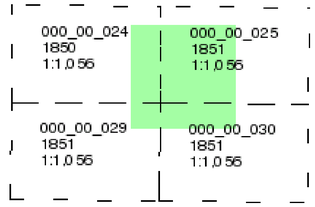

## Published 1850 - 1851

## Source map scale - 1:1,056

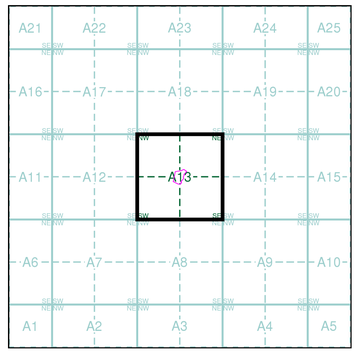

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

LANDMARK INFORMATION GROUP®

## Lancashire And Furness

## Published 1891

## Source map scale - 1:500

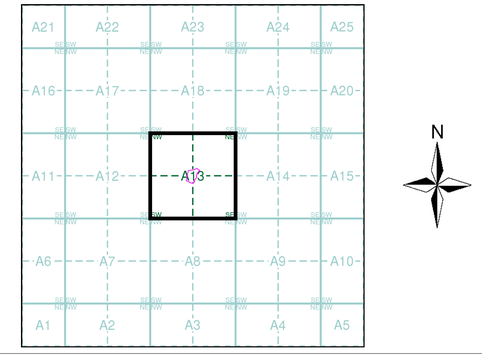

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

## Ordnance Survey Plan

## Published 1958 - 1981

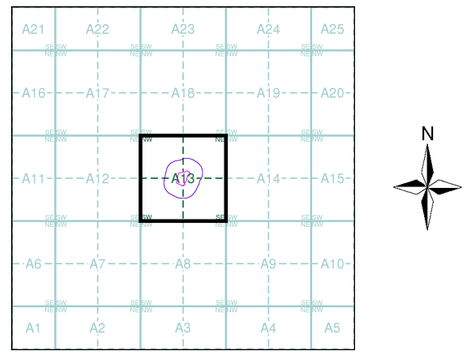

## Source map scale - 1:1,250

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

## Supply of Unpublished Survey Information

**Published 1973 - 1974**

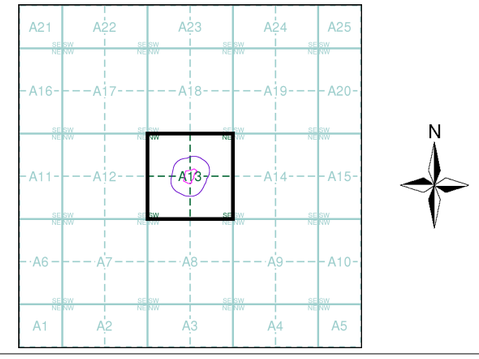

**Source map scale - 1:1,250**

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a `work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

## Large-Scale National Grid Data

**Published 1992**

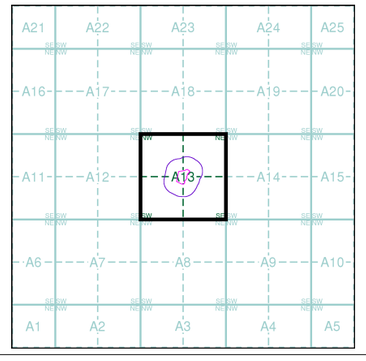

**Source map scale - 1:1,250**

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

## Map Name(s) and Date(s)

**Introduction**

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

# APPENDIX C

## COAL AUTHORITY

The Coal Authority

# CON29M
## coal mining report

1, DOWNLEY DRIVE, MANCHESTER, LANCASHIRE, M4 7JU

### Known or potential coal mining risks

| | |
|---|---|
| Past underground coal mining | Page 3 |
| Future underground coal mining | Page 3 |
| Withdrawal of support | Page 5 |

### Further action

No further reports from the Coal Authority are required. Further information on any next steps can be found in our Professional opinion.

For more information on our reports please visit www.groundstability.com

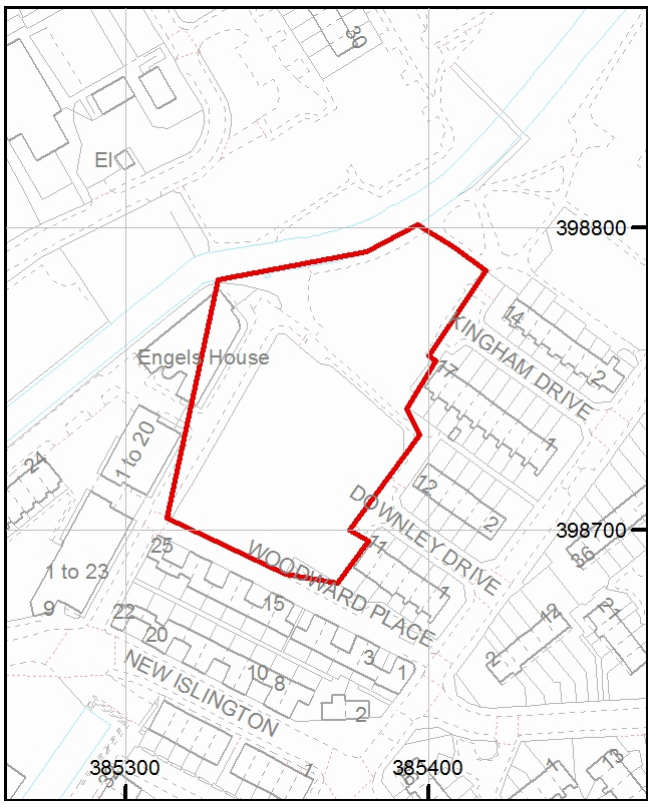

### Professional opinion

According to the official mining information records held by the Coal Authority at the time of this search, evidence of, or the potential for, coal mining related features have been identified. It is unlikely that these features will impact on the stability of the enquiry boundary.

# Enquiry boundary

## Key

Approximate position of enquiry boundary shown

We can confirm that the location is **on the coalfield**

Map data

This report is prepared in accordance with the latest Law Society's Guidance Notes 2018, the User Guide 2018 and the Coal Authority's Terms and Conditions applicable at the time the report was produced.

## Accessibility

If you would like this information in an alternative format, please contact our communications team on 0345 762 6848 or email communications@coal.gov.uk.

# Detailed findings

Information provided by the Coal Authority in this report is compiled in response to the Law Society's CON29M Coal Mining enquiries. The said enquiries are protected by copyright owned by the Law Society of 113 Chancery Lane, London WC2A 1PL.

The Coal Authority owns the copyright in this report and the information used to produce this report is protected by our database rights. All rights are reserved and unauthorised use is prohibited. If we provide a report for you, this does not mean that copyright and any other rights will pass to you. However, you can use the report for your own purposes.

## 1 Past underground coal mining

The property is in a surface area that could be affected by underground mining in 4 seams of coal at 330m to 1,090m depth, and last worked in 1965.

Any movement in the ground due to coal mining activity associated with these workings should have stopped by now.

## 2 Present underground coal mining

The property is not within a surface area that could be affected by present underground mining.

## 3 Future underground coal mining

The property is not in an area where the Coal Authority has received an application for, and is currently considering whether to grant a licence to remove or work coal by underground methods.

The property is not in an area where a licence has been granted to remove or otherwise work coal using underground methods.

The property is not in an area likely to be affected from any planned future underground coal mining.

However, reserves of coal exist in the local area which could be worked at some time in the future.

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

## 4 Mine entries

There are no recorded coal mine entries known to the Coal Authority within, or within 20 metres, of the boundary of the property.

## 5 Coal mining geology

The Coal Authority is not aware of any damage due to geological faults or other lines of weakness that have been affected by coal mining.

## 6 Past opencast coal mining

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

## 7 Present opencast coal mining

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

## 8 Future opencast coal mining

There are no licence requests outstanding to remove coal by opencast methods within 800 metres of the boundary.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

## 9 Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

## 10 Mine gas

The Coal Authority has no record of a mine gas emission requiring action.

## 11 Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Coal Authority, under its Emergency Surface Hazard Call Out procedures.

## 12 Withdrawal of support

The property is in an area where notices to withdraw support were given in 1955.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

## 13 Working facilities order

The property is not in an area where an order has been made, under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

## 14 Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

# Statutory cover

## Coal mining subsidence

In the unlikely event of any coal mining related subsidence damage, the Coal Authority or the mine operator has a duty to take remedial action in respect of subsidence caused by the withdrawal of support from land or property in connection with lawful coal mining operations.

When the works are the responsibility of the Coal Authority, our dedicated public safety and subsidence team will manage the claim. The house or land owner ("the owner") is covered for these works under the terms of the Coal Mining Subsidence Act 1991 (as amended by the Coal Industry Act 1994). Please note, this Act does not apply where coal was worked or gotten by virtue of the grant of a gale in the Forest of Dean, or any other part of the Hundred of St. Briavels in the county of Gloucester.

If you believe your land or property is suffering from coal mining subsidence damage and you need more information on what to do next, please use the following link to our website which sets out what your rights are and what you need to consider before making a claim.
www.gov.uk/government/publications/coal-mining-subsidence-damage-notice-form

## Coal mining hazards

Our public safety and subsidence team provide a 24 hour a day, 7 days a week hazard reporting service, to help protect the public from hazards caused by past coal workings, such as a mine shaft or shallow working collapse. To report any hazards please call 01623 646 333. Further information can be found on our website: www.gov.uk/coalauthority.

# Glossary

## Key terms

**adit** - horizontal or sloped entrance to a mine

**coal mining subsidence** - ground movement caused by the removal of coal by underground mining

**Coal Mining Subsidence Act 1991** - the Act setting out the duties of the Coal Authority to repair damage caused by coal mining subsidence

**coal mining subsidence damage** - damage to land, buildings or structures caused by the removal of coal by underground mining

**coal seams** - bed of coal of varying thickness

**future opencast coal mining** - a licence granted, or licence application received, by the Coal Authority to excavate coal from the surface

**future underground coal mining** - a licence granted, or licence application received, by the Coal Authority to excavate coal underground. Although it is unlikely, remaining coal reserves could create a possibility for future mining, which would be licensed by the Coal Authority

**mine entries** - collective name for shafts and adits

**payments to owners of former copyhold land** - historically, copyhold land gave rights to coal to the copyholder. Legislation was set up to allow others to work this coal, but they had to issue a notice and pay compensation if a copyholder came forward

**shaft** - vertical entry into a mine

**site investigation** - investigations of coal mining risks carried out with the Coal Authority's permission

**stop notice** - a delay to repairs because further coal mining subsidence damage may occur and it would be unwise to carry out permanent repairs

**subsidence claim** - a formal notice of subsidence damage to the Coal Authority since it was established on 31 October 1994

**withdrawal of support** - a historic notice informing landowners that the coal beneath their property was going to be worked

**working facilities orders** - a court order which gave permission, restricted or prevented coal mine workings
