

Power Safe – 20Kva to 60Kva

Powersafe® protects generators from damage, vandalism and theft. We pioneered the design of these purpose-built, protective containers and they're now recommended by insurers. In fact, they're proven to lower site insurance premiums.

Powersafe® includes cable entry points, internal lights, ventilation, a built-in distribution board and bund switch to protect against fuel leaks. The generator is sealed within steel skins and is secured by a virtually impregnable double high security locking mechanism. It even protects your fuel supply.

Generator sizes	20Kva, 40kva, 60Kva
Internal Fuel Tank	1820 litres
Internal MDU	100Amp MDU (Hard wired or Plugged)
Dimensions L x W x H	3048 x 2438 x 2627mm
Weight: wet	Upto 5,500kg (with 60kva)

Ideal for

- ✓ Construction sites
- ✓ Highway or airport runway repairs
- ✓ Telecom sites including mobile masts
- ✓ Utilities sites (particularly when water contamination could be a factor)

- Can run for up to 800 hours between refuelling
- Environmental advantages include reduced risk of fuel leaks, lubricant spillage or contamination
