Executive Summary

Appointment	In March 2021 Curtins were instructed by One Manchester Housing on behalf of Jigsaw to undertake a Phase 1 Preliminary Risk Assessment of a currently vacant plot of land located at the junction of Carisbrook Street and Lathbury Road, Harpurhey, Manchester M9 5GE identified as Blencarn Walk. The site is centred on NGR SD 85910 00897 and covers an area of approximately 0.12 Ha. It is understood that the site is proposed to be redeveloped as residential dwellings.
Current Site Status	The site is located west of Carisbrook Street and north of Lathbury Road. The site is currently occupied by unkept grass surface cover and trees along the site boundaries. A short metal fence surrounds the site with a gateway on the eastern boundary.
Site History	Earliest mapping (1848) shows that the site was undeveloped, with possible water courses / features within 250m. The site was developed by the 1890s with three rows of terraced residential dwellings, two of which are aligned northeast-southwest and one aligned east-west on the south-western boundary. Post-WWII mapping shows the majority of buildings have been demolished on site, with the exception of Nos. 31, 33 and 35 Sutherland St in the north-eastern corner. WWII Luftwaffe bomb damage mapping for Manchester records a High Explosive bomb impacting just outside of the site's western boundary. By 1968, the three remaining terraced properties are demolished, and the site redeveloped as a Welfare Centre. This building is demolished in recent years with the site then forming the grassed surface covering it has today. Mapping from the 1890s shows reservoirs located from 30m west and 40m southwest. These are no longer reported by 1908 as the surrounding area is developed for terraced housing. Industries located 100-250m have included a dye works, clay pit, brick works, Turkey Lane Works, chemical works, Tape Works and carpentry works. The surrounding area to the south, west and north was developed as terraced housing by 1908 and redeveloped as larger housing with new roadways and green areas by the late 1970s. Refuse heaps were mapped to the east in the 1970s. In later years, recreational grounds and schools are constructed on land to the east.
Geology	BGS mapping indicates the site is underlain by Glacial Till Deposits (clay) and Chester Formation bedrock. Local BGS boreholes within 50m of the site record made ground underlain by clay, with bedrock deeper than 12.19m bgl. Pennine Middle Coal Measures Formation are indicated to be present from 10m south, with a geological fault line separating the bedrock formations. The site is located in a low probability radon area where <1% of homes are estimated to be at or above the radon Action Level.
Mining	While located in a coal mine reporting area, the site is not located in a Development High Risk Area and no recorded mine entries are within 1km. The risk from shallow coal mining is considered to be Low.
Hydrogeology	The site is underlain by a Principal Aquifer associated with the bedrock formation. The superficial deposits are designated as a Secondary Undifferentiated Aquifer. The site is not located within a Source Protection Zone (SPZ). There are no recorded potable groundwater abstraction points within 500m.
Hydrology	The nearest surface water feature is Moston Brook located 119m south of the site flowing south-westwards. There are no recorded surface water abstractions within 500m.
Unexploded Ordnance	The risk from UXO associated with WWII bombing to the intrusive investigation is considered to be Moderate as a High Explosive bomb was recorded on the western boundary in Dec 1940 and a second unrecorded impact may have been hidden by the rubble.
Initial Ground Contamination Assessment	The risk from Made Ground soils posed to the site's end-users and construction workers is considered to be Moderate / Low due to the anticipated lack of contamination in potential Made Ground soils on site. The risk presented to groundwater and surface water receptors is considered to be Low and Very Low, taking into account the lack of historical industrial land use on site. The risk posed to site end-users from ground generating gases arising from organic / putrescible soils on or near the site is considered to be Moderate.

Recommendations

The following recommendations are made with regards to further works at the site:

1. Obtain a Detailed Unexploded Ordnance Risk Assessment report prior to any intrusive investigation;
2. Undertake an intrusive ground investigation;
3. Undertake a GQRA as part of the ground investigation; and
4. Undertake Ground Gas Monitoring over a period of two-three months for methane, carbon dioxide, oxygen, hydrogen sulphide, gas flow in l/hr, weather conditions and barometric pressure (with confirmation if falling, steady or rising).

It is further recommended that this work is completed in advance of any development works taking place.

1.0 Introduction

1.1 Project Background

In March 2021 Curtins were instructed by One Manchester Housing on behalf of Jigsaw to undertake a Phase 1 Preliminary Risk Assessment of a currently vacant plot of land located at the junction of Carisbrook Street and Lathbury Road, Harpurhey, Manchester M9 5GE, identified by the client as Blencarn Walk.

The location and extent of the site is shown in *Figure 2.1* on the following page. It is understood that the site is to be developed for residential dwellings.

At the time of writing, no proposed site plans were available for review.

1.2 Scope of Services

The Phase 1 PRA is intended to provide an overview of the geo-environmental and geotechnical setting of the site, prior to the proposed development of the site.

Through this overview, the Phase 1 PRA aims to develop both a working conceptual and ground model for the site, as well as present an initial assessment of any risks that could be presented to the development including its intended end users and the wider environment.

Specifically, the Phase 1 PRA provides an initial assessment of the site regarding:

- a) Potential on and offsite contamination from historical and/or current uses, including potential ground gas generating sources;
- b) The potential impact on the wider environment by historical and or current use of the site of interest;
- c) The potential impact from surrounding land uses and other environmental factors;
- d) Potential problems associated with geological features such as faulting, mineral extraction, mining and land instability; and
- e) The location of apparent sub-surface structures that may affect the proposed redevelopment.

Consideration of detailed flood risk, ecology and archaeological issues are outside of the scope of this report.

2.0 Current Site and Surrounding Area Details

2.1 Site Location and Current Details

Site use, location and description are shown below in *Table 2.1* and *Figure 2.1*.

Table 2.1 – Site Details

Site Address	Junction of Carisbrook Street and Lathbury Road, Harpurhey, Manchester M9 5GE.
NGR	SD 85910 00897
Area of Site	Approximately 0.12 Ha.
Current Site Use and Description	The site is located west of Carisbrook Street and north of Lathbury Road. Access to the site is from Carisbrook Street. The site is currently occupied by public open space, with unkept grass surface cover and trees along the site boundaries. A short metal fence surrounds the site. The topography of the site is relatively flat, sloping upwards in a northerly direction.

Figure 2.1 – Site Location Plan (site boundary shown in pink and 250m buffer in purple).

2.2 Surrounding Area Details

The following information was established through undertaking an environmental database search. The full Envirocheck report (Ref. 1) is included in *Appendix B*.

Table 2.2 – Surrounding Land Uses

Surrounding Area	N	Kirklington Drive, residential housing beyond.
	E	Carisbrook Street and recreational grounds (pitches, small BMX track).
	W	Residential housing
	S	Lathbury Road and residential housing beyond

3.0 Site History

A review of the available historical mapping and other information for the site, as presented within the Envirocheck Report (Ref. 1), has been undertaken and is presented in *Table 3.0* below.

Table 3.0 – Previous Site and Surrounding Area Uses and Potential Sources of Contamination. *Bold text refers to on-site activity.*

Date	Description	Potential Sources of Contamination
1848 – 1894	The earliest available mapping (1848) shows the site as undeveloped land, forming part of wider agricultural fields with possible water courses / water features within 250m. Mapping from the 1890s shows residential development from 50m northwest and 100m southwest. Reservoirs are located from 30m west and 40m southwest. Local industries include Green Mount Dye Works from 100m south, a Clay Pit and Brick Works from 140m east and Monsall Dye Works 300m north east. Moston Brook is located 100m east, culverted in one area flowing from the northeast to southwest.	• No on site sources of contamination identified. • Dye Works to the south, but surface water flow is to the south / southwest.
1908 – 1938	The site has been developed with three rows of terraced residential dwellings, two of which are aligned northeast-southwest and one aligned east-west on the south-western boundary. The site is bound by Sunderland Street to the east, Lathbury Road to the south, Westmorland Street to the west, and an alley way more housing to the north. The reservoirs west and southwest are no longer present, with terraced housing constructed immediately south, west and north of the site. The Dye Works to the south is mapped as Turkey Lane Works (raising and finishing) and Harpurhey Chemical Works (dye). While the clay pit and brick works to the east are not named, the area remains predominantly undeveloped. The Moston Brook has likely been culverted through this area, from 250m northeast until reappearing again 120m southeast. Allotment gardens have been established on the opposite side of Sunderland Street to the east of the site by the 1930s. By the 1930s, the dye works to the south has been demolished. Post-WWII mapping shows a Tape Works and Greenmount Works (carpentry) established in this area.	• Potential for uncontrolled deposition of Made Ground during on-site construction of terraced properties. • Potential gas source from nearby potentially infilled reservoirs.
1948 – 1965	Post-WWII mapping shows the majority of buildings have been demolished on site, with the exception of Nos. 31, 33 and 35 Sutherland St in the north-eastern corner. This may be due to damage from Luftwaffe bombing. Demolition of terraced housing has also occurred directly northwest of the site, on the opposite side of Westmoreland St. Post-WWII mapping records refuse heaps in the area east of the allotment gardens, where the clay pit once was.	• Potential for uncontrolled deposition of Made Ground during demolition of terraced properties. • Potential gas source from nearby refuse heaps to the east.

Date	Description	Potential Sources of Contamination
1968 – 2006	The three terraced properties in the north-eastern corner have been demolished and a new Welfare Centre constructed. The new building is L-shaped, across the southern and western areas of the site. The allotment gardens are no longer mapped to the east by 1968. Playing fields, tennis courts, new housing and primary school are established in this area by the late 1970s. During the early 1970s, the area of terraced properties south, west and north of the site is cleared of all structures and roads. Redevelopment of the area commences in the late 1970s, with new residential properties, roadways and green spaces established. The works are no longer mapped to the south by the 1970s. An area of residential properties constructed in the late 1970s 40-100m south is cleared of all structures by 1989.	• Potential for uncontrolled deposition of Made Ground during demolition of final houses in north-eastern corner. • Potential for uncontrolled deposition of Made Ground during construction of new Welfare Centre on site.
2006 – Present	The building on site is demolished in recent years (last reported on mapping dated 2006) and the site is vacant grassed land as it is today. No significant development surrounding the site from 1989 to present day.	• Potential for uncontrolled deposition of Made Ground during demolition of building on site.

Potential sources of onsite contamination are further discussed in *Section 6.0*.

4.0 Geology, Hydrogeology and Hydrology

4.1 Geology and Hydrogeology

A study of the Envirocheck (Ref. 1) Report and the British Geological Survey (BGS) 1:50,000 mapping records (Bedrock and Superficial Editions) for Manchester (Sheet 085) dated 2010 (Ref. 2) indicates the following geological and hydrogeological succession underlying the site:

Table 4.1 – Geological/Hydrogeological Succession

Geology	Associated Hydrogeological Classification
Glacial Till – Devensian, Diamicton ¹	Secondary Aquifer, Undifferentiated ²
Chester Formation – Sandstone ³	Principal Aquifer ⁴

Notes:

1. A heterogeneous mixture of clay, sand, gravel, and boulders varying widely in size and shape.
2. These layers have not been assigned an attribute either category A or B rock type due to not being possible. In most cases, this means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type.
3. Coarse-grained, typically well-cemented proximal facies to a fine-grained, less well-cemented distal facies. The gravel is composed of well-rounded pebbles, cobbles and boulders in a coarse to fine granulestone and silty sandstone matrix.
4. Layers of rock or drift deposits that have high intergranular and/or fracture permeability - meaning they usually provide a high level of water storage. They may support water supply and/or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifer.

BGS records do not indicate the presence of Made Ground on site, however the site's historical land use, primarily as residential dwellings constructed in 1908 and demolished in the early 1970s and the Welfare Centre building on site from 1968 up to recent years until it was demolished, suggests that Made Ground soils may be present beneath the site. There is the potential that the terraced properties may have had basements, which may have been back-filled with demolition material.

There are two BGS recorded borehole logs available for review within 50m of the site. These are summarised in *Table 4.2* below. Bedrock was not encountered in these boreholes, advanced up to 12.19m bgl. A borehole located 430m southwest recorded Pennine Middle Coal Measures Formation bedrock at 21.03m bgl.

Table 4.2 – BGS Borehole Records

Record Reference	Location (NGR)	Details (bottom to top of strata/details/thickness of strata)	
SD80SE424	36m southwest (385870, 400850)	0.00m to 0.60m bgl 0.60m to 1.20m bgl 1.20m to 4.57m bgl 4.57m to 4.87m bgl 4.87m to 12.19m bgl 12.19m bgl	MADE GROUND: Brick and rubble fill (0.60m) Firm light brown CLAY (0.60m) Stiff brown/grey boulder CLAY (3.37m) Compact brown SAND, moist (0.30m) Stiff brown boulder CLAY with this sand partings (7.32m) <i>Borehole terminated</i>

Record Reference	Location (NGR)	Details (bottom to top of strata/details/thickness of strata)	
SD80SE423	49m south (385920, 400820)	0.00m to 4.35m bgl 4.35m to 8.23m bgl 8.23m to 9.14m bgl 9.14m bgl	MADE GROUND: Loose cinder fill (4.35m) Firm silty grey CLAY with pockets of black silt (3.88m) Firm brown boulder CLAY (0.91m) <i>Borehole terminated</i>

There are four geological fault lines within 1km of the site, all aligned northwest-southeast. The nearest are located approximately 10m south and 180m north of the site's boundaries, with the others further north.

While BGS records indicate the site is underlain by the Chester Formation (sandstone), the Pennine Middle Coal Measures and the Manchester Marls Formation (mudstone) are located south and north of the geological fault lines respectively.

The site is not situated within a Source Protection Zone (SPZ). There are no recorded groundwater abstraction points within 500m of the site.

4.1.1 Mining

A review of the Coal Authority interactive mapping (Ref. 4) for the area indicates that the site is located within a Coal Mining Reporting Area, however it is not located within a Development High-Risk Area.

There are no recorded mine entries within 1km of the site.

There are no recorded coal workings and no probable coal workings within 850km of the site.

Consequently, the risk to development from historic coal mining is considered to be **Low**. No further actions are required to further assess the risk to development from historic coal mining.

The closest recorded BGS mineral site is located 208m southeast of the site, an opencast site known as Harpurhey Brick Works which extracted common clay and shale from superficial soils (Till) and is recorded to have ceased works.

4.1.2 Other Ground Stability Issues

The Envirocheck Report (Ref. 1) confirms that there is a very low risk to no hazard from the following ground stability hazards on the site; collapsible ground, compressible ground, ground dissolution, landslide ground, running sands and shrinking or swelling clay.

4.1.3 Ground Gas

Given the historical development on site, primarily for residential use, it is possible that made ground soils and demolition material may be present on site. These soils may act as a source of ground gas generation.

There is one historical landfill located within 250m, located 238m east located off Northampton Road. Type of waste included inert, industrial, commercial, household and special waste, and liquid sludge. Input dates between May 1974 to December 1977.

The nearest area of infilled land (non-water) is located 93m northeast, which is an infilled pit, quarry etc. dated 1990.

Six infilled water features (Pond, marsh, river, stream etc.) are located within 100m of the site. The nearest is located 27m northeast and all are dated between 1848 and 1894.

The Envirocheck Report (Ref. 1) and BGS Radon Mapping (Ref. 5) confirms the site is situated in an area where <1% of homes are above the radon action level. Radon protection measures are therefore not considered necessary within the proposed development. However, where the new development incorporates a basement the advice of a specialist Radon assessor must be obtained.

4.2 Hydrology

The nearest surface water feature is Moston Brook located 119m south which flows south-westwards.

No recorded pollution incidents to controlled waters have occurred within 250m of the site.

There are no recorded surface water abstractions within 500m.

The nearest surface water discharge consents are located from 116m east, operated by United Utilities Water Limited.

5.0 Unexploded Ordnance Risk Assessment

Military activities including those conducted as part of both the First and Second World Wars have resulted in a legacy of unexploded ordnance (UXO) being present within the shallow soils of the UK.

UXO result from various sources including both allied (military training) and German (bombing raids) with a guide figure of approximately 10% of all munitions failing to function as designed.

The likelihood of UXO being encountered on a development site is influenced by several factors including; the proximity to strategic targets, the nature of the development works being undertaken and evidence of local damage in the post-war periods amongst others. To determine the likelihood of UXO being present on a site, a step-wise risk assessment process is followed. This process is outlined within CIRIA C681 Unexploded Ordnance: A Guide for the Construction Industry (Ref. 6) with the following commentary considered to represent a Preliminary Risk Assessment intended to guide if and where there is a requirement for a Detailed Risk Assessment.

5.1 Preliminary UXO Assessment

Risk mapping (Ref. 7) for UXOs has placed the site in a **Moderate** risk area. Moderate-risk regions are those that show a bomb density of between 11 and 50 bombs per 1000 acres and that may contain potential WWII targets. Action to mitigate the risk is considered essential, albeit more likely that a reduced scope of work is required compared with that needed for high-risk regions.

A review of the available post-WWII historical mapping (Ref. 1) identified that the majority of terraced properties on site were cleared / demolished post-WWII.

A review of available online bomb damage mapping for Manchester (Ref. 8) does record a High Explosive bomb landing outside of the western boundary on site 22-24 Dec 1940, as shown below.

Figure 5.1 – Site boundary shown in red. Red circles indicate high explosive bomb hits, blue circles indicate firebomb hits.

Considering the above, and that a second explosive may have gone unnoticed within the rubble from the initial blast, the risk of encountering potential UXO as part of future intrusive works is considered **Moderate** and it is recommended that a Detailed Unexploded Ordnance Risk Assessment report is obtained from a specialist prior to any intrusive works.

If unexploded ordnance is discovered during any works, stop immediately, prevent access to the area, and inform the police. If the site boundary or location changes then the UXO risk should be reassessed.

6.0 Conceptual Site Model & Qualitative Risk Assessment

The conceptual site model (CSM) and Qualitative Risk Assessment (QRA) are presented in the table within this section.

The CSM details the source-pathway-receptor linkages or potential pollutant linkages (PPL) that have been identified for the site. The QRA details the associated level of risk relating to these potential pollutant linkages.

The CSM and QRA concern risk to human health and water environment with additional, more specific risk assessment protocols contained within the main body of this reporting, as detailed in *Section 6.1* below.

The QRA follows the framework outlined within CIRIA C552 (Ref. 9) which is summarised within *Appendix C*.

The 'risk rating' within the QRA refers to the risk that the source, pathway, receptor linkage or PPL is complete. Unless specifically stated it does not necessarily refer to an immediate risk and is intended to be used as a tool to assess the necessity for further assessment/investigation.

6.1 Additional Risk Assessments

The following risk assessments, listed below, are not included within the main CSM and QRA but nonetheless can be of critical importance to the onward development of the site:

- The risk presented by Mining is discussed and assessed in *Section 4.1.1*.
- The risk presented by Radon is discussed and assessed in *Section 4.1.3*.
- The risk presented by Unexploded Ordnance is discussed and assessed in *Section 5.0*.

Under current health and safety legislation, employers are required to carry out their own appropriate risk assessments and mitigation to protect themselves and their employees, other human receptors and the environment from potential contamination. Such risks must be adequately mitigated by law, specifically the Construction Design Management (CDM) Regulations, 2015 (Ref. 10) which require that potential risks to human health and the environment from construction activities are appropriately identified and all necessary steps taken to eliminate / manage that risk. It has been assumed that any future construction works on site will be undertaken in compliance with these requirements.

Qualitative Risk
Assessment

Generic
Quantitative Risk
Assessment

Detailed
Quantitative Risk
Assessment or;
Remedial Action

- The table below represents the first stage in the land quality risk assessment process: The Qualitative Risk Assessment.
- For a development site to be deemed 'suitable for use', the level of risk needs to be brought down to acceptable levels, i.e. low to very low risk. The purpose of each stage of risk assessment is ultimately to establish, if there is a requirement for additional levels of assessment to be made to have sufficient confidence to support a risk characterisation or management decision, e.g. remedial action.
- In the absence of specific site data, a Generic Quantitative Risk Assessment is invariably recommended.

Conceptual Site Model			Qualitative Risk Assessment			Recommended Actions
Source	Pathway(s)	Receptor(s)	Consequence	Likelihood of Occurrence	Risk Rating	
Significant sources of on-site contamination: - Made Ground of unknown composition from uncontrolled deposition of materials onsite during the construction and demolition of properties onsite Significant sources of off-site contamination: - Uncontrolled deposition of Made Ground during the construction of roads and structures and demolition near and adjacent to the site's boundaries.	Direct contact, ingestion, inhalation (dust and vapours)	End-user of site (Residents) & Construction Workers	Medium Chronic health risk	Low Likelihood Based on the site's limited development history and lack of historical industrial use, the likelihood of encountering significant contamination within the Made Ground is considered to be Low. There is potential for localised contamination related to ACM-containing materials considering structures onsite before 2000s. Likelihood of construction workers coming into contact with contamination on site can be reduced by appropriate PPE.	Moderate / Low	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.
	Vertical migration through the superficial deposits (soils) May occur due to existing service corridors and physical processes including; capillary action and downwards into the natural deposits through infiltration.	Controlled Waters (Groundwater) Secondary Aquifer – Undifferentiated (superficial deposits) Principal Aquifer (bedrock) There are no recorded potable groundwater abstraction points within 500m. The site is not within a designated Source Protection Zone.	Medium Pollution of sensitive water resources	Unlikely While there is the potential for localised contamination to migrate vertically through the superficial deposits to the bedrock Principal Aquifer, there is a low likelihood of significant contamination being present in the Made Ground due to lack of historical industrial land use and taking into account the lack of an SPZ or recorded abstraction points within 750m.	Low	No further action required
	Horizontal migration over and through the superficial deposits (soils)	Controlled Waters (Surface Water) Nearest surface water feature is the Moston Brook 119m south flowing south-westwards. No recorded surface water abstraction points within 500m.	Mild Pollution of non-sensitive water resources	Unlikely Considering the distance from the site to the nearest surface water receptor and the expected low levels of contamination within the Made Ground, this pathway is considered unlikely.	Very Low	No further action required
Significant sources of ground gas: - Potential gas source from nearby potentially infilled reservoirs west and south - Potential ground gas source from refuse heaps from 100m east - Infilled land (non-water) located 93m northeast - Infilled land (water) located from 27m northeast	Vertical and horizontal migration through existing service corridors and the underlying superficial deposits	End-user of site (Residents)	Medium Human health risk	Likely There is potential for gas generation from any localised organically rich deposits present in the Made Ground or superficial soils and reflecting.	Moderate	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.

7.0 Conclusion and Recommendations

The qualitative risk assessment (QRA) determined a varied level of level of risk associated with the proposed development.

The QRA concluded by recommending that generic quantitative risk assessments (GQRA) were conducted to confirm the assessment of risk ascribed to each of the respective potential pollutant linkages (PPLs). It is recommended that the GQRA is conducted as part of a ground investigation in support of the engineering design of the proposed development.

In summary, the following recommendations are made:

- Obtain a Detailed Unexploded Ordnance Risk Assessment report prior to any intrusive works being undertaken;
- Undertake an intrusive ground investigation;
- Undertake a GQRA as part of the ground investigation; and
- Undertake ground gas monitoring over a period of two-three months for potential hazardous gases.

It is further recommended that the site investigation works are completed in advance of any development works taking place.

7.1 Contaminants of Concern

Potential contaminants of concern associated with the sources identified within the Conceptual Site Model in *Section 6.0* of this reporting include but are not limited to: broad range aliphatic and aromatic hydrocarbons present within any fuel oils; polycyclic aromatic hydrocarbons (PAHs); inorganic compounds including heavy metals; and asbestos present in discarded building materials.

Potential contaminants associated with the airborne dust/particulates include but are not limited to: polycyclic aromatic hydrocarbons and inorganic compounds including toxic metals that are also accounted for by potential onsite contaminants of concern.

7.2 Other Considerations

The requirement for additional surveys, e.g. arboricultural and ecological surveys, should be confirmed through advice from a suitably qualified and experienced professional.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Natural England Copyright Notice

Site of Special Scientific Interest, National Nature Reserve, Ramsar, Special Protection Area, Special Conservation Area, Marine Nature Reserve data (derived from Ordnance Survey 1:10000 raster) is provided by, and used with the permission of, Natural England who retain the copyright and Intellectual Property Rights for the data.

Scottish Natural Heritage Copyright

Contains SNH information licensed under the Open Government Licence v3.0.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England.

Natural Resources Wales Copyright Notice

Contains Natural Resources Wales information © Natural Resources Wales and Database Right. All rights Reserved. Contains Ordnance Survey Data. Ordnance Survey Licence number 100019741. Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.
