00412 Robotics Living Laboratory (Phase 2) - Secured by Design Statement

12/10/2023

This statement is in support of the planning application for the above project to confirm that the Secured by Design principles are embedded within the University Campus Security Strategy.

The University Campus Security Strategy is a stringent process which includes the following:

- A fully trained in house campus security team consisting of 40 officers patrolling and responding 24hrs a day and available 365 days a year.
- A campus security hub with a security control room equipped with latest life safe critical monitoring and intruder detection systems.
- CCTV is used to monitor all buildings internally and all external areas on campus monitored at the dedicated control room by trained operators.
- Access to buildings is controlled by a campus wide electronic access control system.
- All buildings are security risk assessed annually by an external auditor.
- All buildings on campus are architecturally designed with secure by design principles.
- Car Parks and external access is manned and monitored by campus security.
- All security devices such as locks, alarms, CCTV, access control and critical alarm systems are required to be of BS standard and are detailed to MMU security specification.
