DISCLAIMER

This report has been prepared by LK Consult (LKC) who have exercised such professional skill, care and diligence as may reasonably be expected of a properly qualified and competent consultant, experienced in preparing reports of a similar scope.

However, to the extent that the report is based or relies upon information contained in records, reports or other materials provided to LKC, which have not been independently produced or verified, LKC gives no warranty, representation or assurance as to the accuracy or completeness of such information.

This report is issued on the condition that LKC will not be held liable for any loss arising from ground conditions between sampling points (i.e. boreholes/trial pits/hand augers/surface samples) which have not been shown by the sampling points or related testing carried out during the investigation, nor for any loss arising from conditions below the maximum depth of the investigation. Opinions on such conditions, where given, are for general guidance only.

This report is prepared solely for the benefit of Jordon Contractors Ltd. It may not be relied upon by, or submitted to a third party for their reliance for the purposes of valuation, mortgage, insurance and regulatory approval, until all invoices have been settled in full.

Those using this information in subsequent assessments or evaluations do so at their own risk.

1 Introduction

1.1 Background

LK Consult Ltd (LKC) has been commissioned by Jordon Contractors Ltd to provide a Site Completion Report for land off 25-33 Wilmslow Road, Rusholme (planning reference 111739/FO/2016/S1).

The site is located immediately off Wilmslow Road, in the Rusholme area of Manchester at National Grid Reference 385110E 395610N (Figure 1). The site is bounded to the north, east and south by residential areas.

The site is approximately 0.2ha in size (see Figure 2). The site proposed layout plans are provided in Appendix A.

LKC understand that the entire footprint of the study site will be occupied by the two storey underground car park. No ground floor landscaping will be present. A landscaped terrace will be located “on top” of the car park area in the rear of the site (see plans in Appendix A) and any exposed soil is proposed to be within raised planters.

The aim of the Site Completion Report will be to demonstrate to Local Authority that the site has been suitably remediated in line with the Remediation Statement and in accordance with the National Planning Policy Framework (NPPF)¹, where the site is “suitable for use” for the proposed development.

The Site Completion Report should be sufficient to satisfy contaminated land condition 4. Details are provided in the following Sections.

1.2 Summary of Required Validation Work

The required validation work was based on the Geo-environmental Investigation and Risk Assessment by LKC (Ref: 16 1253-01, dated July 2016).

Based upon the findings of the above the following validation was required:

- i) Verification testing of all imported soil for soft landscaping areas.
- ii) Provision of waste transfer documents from the removal of the temporary road. Additionally, LKC will try and obtain any waste transfer documents from the excavation of the undercroft car park previously undertaken, if available.
- iii) Details of any unexpected contamination identified onsite, suitably risk assessed and / or validated.

Selected photographs of the completed site are presented in Appendix B.

2 Verification Testing of any Imported Topsoil

The site has no formal landscaping except for limited number of raised planters above the undercroft carpark (that occupies the whole development footprint).

It is understood there will be no raised planters on the above ground outside section (none were identified during the site visit) and therefore no soil import will be required.

¹ DCL (2018). “National Planning Policy Framework.” Department of Communities and Local Government.

3 Disposal Tickets

Please note the site had already been excavated to 6m depth to accommodate the undercroft carpark into the natural clay years before the client and LKC were involved with the site. No records for the disposal of this material is available for this report.

Of the material that has been disposed offsite in recent years a total of c. 900m cube (113 loads) have been removed offsite by Digway Bulk Haulage Excavation, based in Audenshaw.

A list of each load is presented in Appendix C. Selected tickets are also presented as an example. If required all 113 tickets can be provided.

4 Unexpected Contamination

LKC understand no unexpected contamination was encountered during excavation. It should be noted when LKC undertook the original site investigation the site had already been excavated to natural strata on the majority of the site.

5 Conclusion

The work onsite has been validated in accordance to the agreed recommendation in the Geo-environmental Report (with justified adjustments).

Based on the above information LKC considers 25-33 Wilmslow Road, Rusholme is 'suitable for use' for mixed use residential apartments.

LKC considers there is sufficient information to discharge the outstanding contaminated land planning condition (condition 4) by Manchester City Council.
