Introduction

Application Background

JCDecaux has for many years been the world leader in the provision of street furniture incorporating advertisement display and out-of-home advertisements. The applicant has actively surveyed the Manchester region to identify suitable locations that it is believed offer the best opportunity for the development large format advertisement displays. This exercise has been a continual process and has resulted in this current proposal. The proposal set out in this document relates to an existing site along Stockport Road.

The application is submitted under the provisions of the Town and Country Planning (Control of Advertisements) (England) Regulations 2007 and relates to the removal of the existing display, followed by the installation of a single sided roadside display. The proposed advertisement is a standard 48 sheet landscape display, affixed to a supporting legs behind featheredge fencing, exclusive to JCDecaux. One of the benefits of this design of structure is that it occupies a very small footprint of land and retains the existing aspect beneath the advertising panel.

The position for the advertisement display is on a large plot of land, to the north of Stockport Road at the junction of Crowcroft Road, as indicated in the following pages. The site is considered acceptable in planning terms because of the local context and character. The site does not fall within a conservation area nor would it effect the setting of a heritage asset. The application site is capable of accommodating the proposed advertising structure without harming the interests of visual amenity or public safety.

Application Site

Site and Surroundings

The application site is part of an existing advertisement site to the north of the Stockport Road, at the junction of Crowcroft Road. The land fronts Stockport Road which is a main road which leads to and from the City centre to the north-west. The existing display is visible to those travelling north-west along Stockport Road. The proposal will see the display removed and the installation of a single display facing in the same orientation. The display will be positioned on the edge of the application site, fronting a low fence line and pavement facing south-east. The design of the structure ensures that very little of the land is required to accommodate the supporting fence line. Adjacent to the site is a number of residential properties, as seen in the images below, which shall not be directly affected by the proposal due to their position behind the existing and proposed display unit. The display legs will be positioned behind featheredge fencing, towards the centre of the plot of land, as to not affect any adjacent properties.

The surrounding area is mixed in land use terms with a combination of residential and open plots of land within the locality. The site lies outside of any identified Conservation Area nor is in the vicinity of a heritage asset. The predominant character of the surrounding area includes a range of building types, designs and size. The advertisement would face south-east continuing the extant advertisement orientation. Stockport Road is a busy, urban street that is well lit and heavily trafficked throughout the day and night.

Application Site

Block Plan

This part of Manchester holds a prominent character due to the surrounding building uses, in addition to the main road infrastructure as a main thoroughfare to the south-east of Manchester City Centre. The road carries large volumes of traffic through the day and night, including those travelling to the centre. The surrounding area is mostly modern buildings and a number of residential properties in the vicinity of the advertisement site.

This proposal is considered to be acceptable in amenity terms because of the existing use of the site and the role advertising plays within these areas to encourage consumer confidence and spend. The proposal will not result in the loss of or any harmful impact upon the character, appearance or amenity of the centre.

The advertisement will be single sided and face south-east. The advertisement is designed to be elevated above the road and clearly visible to drivers on the respective approach to the site. The pixel pitch of the screen is 10mm which means the minimum clear viewing distance is 10m and the optimum viewing distance is between 60-70m.

The south-eastern approach to the application site is along a relatively straight run from the junction with the road continuing straight when passing the display. The elevation of the advertisement is 2.5m above the street level and the angle of presentation is head on to oncoming traffic. The driver will be able to view the advertisement, take in its simple message, before passing and continuing their journey.

The following page illustrates the proposed view for the display and suggest no visual conflict for their installation. It is considered that the proposed display is unlikely to present a road hazard to drivers exercising reasonable care.

Photomontage Image

The above images provide a before and after montage to illustrate how the advertisements would be seen within the context of the site, heading north-west along Stockport Road.

Sustainable Design

The Importance of Good Design

At the heart of the Company's philosophy is a dedication to design excellence. JCDecaux is renowned for its landscape legacy of beautifully designed Street Furniture & road side displays created through the continued collaboration with leading Architects and Designers to develop comprehensive lines of Street Furniture and road side displays for Cities across the world.

A core function of the JCDecaux group is the Research and Development Department (R&D), which serves as the essential link between art and industry. With more than 120 staff, the commitment of the R&D department is to constantly innovate with a drive to source leading-edge sustainable technology. The R&D team constantly strives to incorporate more innovative services into the equipment we develop, with the main focus being on integration of equipment into the environment, whether this is urban or indoor. Product design is guided by eco-design principles. The materials used are of the highest quality and maximum strength. Reduced energy consumption, adaptation to useful life and recyclability are at the core of our design processes. A reduced ecological footprint is therefore ensured for each of our products. This approach forms the foundation upon which JCDecaux builds its furniture and which runs through the entire supply chain and lifecycle of our products. This very effective resource will be called upon by JCDecaux in delivering the most appropriate design solutions that can meet the climate emergency and ensure no harm to the environment is create by our business operations.

The design is consistent across the City and nationwide. The distinctive architecture of this display unit is unique to JCDecaux and effectively combines function with form. The investment in high quality durable designs is intended to enhance the public realm and to complement the area. The investment in better quality and interesting structures also raises the standard and challenges the expectations on sustainable developments and the part roadside advertising plays in realising this ambition.

Planning

The 2007 Regulations

This application is submitted for advertisement consent, the control of which is governed by the 2007 Regulations. The Regulations provide a self contained code for advertising developments set apart from mainstream Planning controls. Proposals are to be determined and considered in light of the Regulations, which identifies two areas of interest that are material factors in each case.

The Advertisement Regulations and Policy

Regulation 3 states that;

- '1. A local planning authority shall exercise its powers under these Regulations in the interest of amenity and public safety, taking into account –The provisions of the development plan, so far as they are material; and Any other relevant factors
2. without prejudice to the generality of paragraph (1) (b)-
 - a) Factors relevant to amenity include the general characteristics of the locality, including the presence of any feature of historic, architectural, cultural or similar interest;
 - b) Factors relevant to public safety include the safety of persons using any highway, railway, waterway, dock, harbour or aerodrome (civil or military); whether the display of the advertisement in question is likely to obscure, or hinder the ready interpretation of, any traffic sign, railway signal or aid to navigation by water or air'

National Guidance on the control of advertisements is provided within The National Planning Policy Framework (NPPF) and associated guidance on advertising within the Planning Practice Guidance ("PPG"). Section 8 of the PPG explains in greater detail the criteria for considering amenity issues in advertising proposals. More specifically, on the matter of scale the guidance suggests that advertisements should respect the scale of the surroundings.

On the matter of public safety, the principle consideration is whether the proposed advertisement is likely to affect driver behaviour and whether the position of the advertisement is acceptable in safety terms. This proposal has been assessed in light of the above criteria.

Planning

Material Considerations

Advertisement Display Detail

The development concerns the display of a single sided illuminated advertisement, capable of automatically changing the advert on show. The advertisement will be changed remotely by means of an ISDN feed therefore there is no waste material associated with printed displays that are changed every two weeks and then recycled or, in the case of backlit vinyl, disposed of via landfill. The reduced need to visit the site means a biannual visit is necessary for routine maintenance. LED technology is one example of how modern methods are redefining the roadside media and providing a more sustainable way to advertise. Our LED modules are completely free of hazardous material with all components being recyclable at end of life in accordance with EU Directives. The display screen is fully programmable to control lighting levels and hours of operation to within acceptable levels, following the advice and recommendations of the ILP.

The design features a featheredge fencing finish, which is supported by a steel beam that provides the platform to hold the display panel. The benefit of this design is firstly in the aesthetics of the architecture, which sets a high bench mark for the quality of roadside advertising over and above the traditional functional display. Secondly, the design ensures a very small footprint is required to accommodate the supporting legs behind the fencing.

The Regulations require an assessment of the proposal in light of amenity and public safety considerations and are therefore considered in more detail below.

Amenity

In terms of local context, the immediate setting is that of an existing advertisement site along Stockport Road, along a busy main road. The area is not sensitive in terms of uses, views or architecture.

The visual impact of the proposed display on the street is not considered to be significant given the character of the area. This part of Manchester is recognised as leading to a retail hub with a mix of uses, surrounded by busy roads. In terms of amenity, it is considered that no harm would arise should these displays be permitted at the application site. Neither structure scale nor use will have a negative effect on the appearance or character of the area.

Highways

The position for the advertisement is facing traffic heading west along the main road. The approach to the site provides extended visibility and ample opportunity for drivers to see the simple messages being displayed without resulting in a hazard to road users.

The images within this document indicate that there is no visual conflict with the signal heads that could confuse a driver. It is considered therefore that the position and manner of advertisement display is unlikely to prejudice road safety.

OUT-OF-HOME: THE SUSTAINABLE PUBLIC SCREEN

As JCDecaux invests in energy-efficient solutions reducing our carbon footprint still further, Out-of-Home is a sustainable, trusted medium that reaches the audiences our partners need – a medium that gives back to the community by providing valuable public amenities including bus shelters and life-saving defibrillators paid for by advertising. #PowerofthePublicScreen

KEY THINGS TO KNOW

"Out-of-Home is a public, one-to-many medium, efficiently reaching an audience of millions with a relatively small number of displays. Digital Out-of-Home represents just 0.03% of the UK's 100 million digital screens."

(Source: The Drum/Clear Channel estimate)

"Out-of-Home represents a fragment of the UK's total energy usage. The UK's OOH sector accounts for less than 0.04% of the UK's total energy usage."

(Source: BEIS Report 2020)
