15th May 2023

Dear Sir/Madam

PRE-APPLICATION CONSULTATION – PROPOSED RADIO BASE STATION INSTALLATION AT FOOTWAY MAN26959 KIRKMANSHULME LANE, BELLE VUE, GORTON, MANCHESTER, M12 4WB NGR E:387286 N:395964

CEP Telecoms Ltd act on behalf of mobile telecommunications operator CK Hutchison Networks (UK) Ltd. The proposal is to install a radio base station, in order to provide the latest 3G, 4G and new 5G technologies to the Belle Vue area.

As part of CK Hutchison Networks (UK) Ltd continued network improvement program, there is a specific requirement for an installation at the grass verge of Kirkmanshulme Lane to ensure that the latest high quality 3G and 4G service provision is provided in this area of the city. The proposed column will also ensure that new 5G coverage can also be provided at this location. This ensures that coverage and capacity requirements are maintained.

The proposal, which we feel is the best solution to serve our customers in the local community, will include: installation of a 20m phase 9 monopole, supporting 6 no. antennas, 2 no. equipment cabinets, 1 no. electric meter cabinet, and ancillary development thereto at the **MAN26959 FOOTWAY AT KIRKMANSHULME LANE, BELLE VUE, GORTON, MANCHESTER, M12 4WB NGR E:387286 N:395964**

Enclosed for reference is a site location plan and an indicative drawing of the proposed monopole.

The proposed height of 20m is essential in order to ensure the latest 4G and new 5G technologies are provided in the Belle Vue area. These latest technologies operate at higher frequency bands than older technologies such as 2G and 3G. The higher the frequency band the greater the radio signal is naturally weakened. This means that the effects of clutter are even more significant than for the provision of older technologies. As a result, a higher column is normally required to maintain the same coverage footprint. The latest 4G technology and new 5G service provision carry higher capacity and data speeds to the user, this leads to such antennas having to be positioned at a higher height than more standard antennae and in turn a taller antenna height for 5G service provision.

The antennas are proposed to be open and not shielded as this provides the optimal service provision to the surrounding area. If the antennas were to be shrouded, they would not be as efficient at providing

CEP Telecoms Ltd, 1a Station Court, Station Road, Guiseley, LS20 8EY
www.ceptelecoms.com

the latest technologies to this cell area. Thus an additional installation would likely to be required in this cell area which would lead to the proliferation of masts contrary to the NPPF.

The cabinets are designed to appear like other statutory undertakers equipment cabinets. They are small for telecommunications apparatus and are proposed to be coloured grey to assimilate with other commonly found equipment cabinets. The cabinets can be installed under the operators permitted development rights, but have been included on the plans and in the description in order to remain fully transparent.

All CK Hutchison Networks (UK) Ltd installations are designed to be fully compliant with the public exposure guidelines established by the International Commission on Non-Ionizing Radiation Protection (ICNIRP). These guidelines have the support of UK Government, the European Union and they also have the formal backing of the World Health Organisation. A certificate of ICNIRP compliance will be included within the planning submission. In fact, because of the very low power utilised by telecommunications sites the emissions will be many times lower than the ICNIRP threshold.

We would welcome your views (within 14 days of the date of this letter) before we finalise the proposal and submit the planning notification to the Local Planning Authority.

Yours faithfully

Ella Chandler BSc (Hons)

Planning Manager
