COMPLEX CHALLENGES ...
MADE SIMPLE

1.0 Introduction

1.1 Background

- 1.1.1 This report has been prepared by RoC Consulting for Property Alliance Group on behalf of Williams Motor Co (Holdings) and Alliance UBS Limited, to support a full planning application for a life sciences and purpose-built student accommodation (PBSA) development (hereafter referred to as the 'Proposed Development') on Phase Two of the Upper Brook Street Masterplan (hereafter referred to as the 'Site'). The proposal would bring forward development on a previously developed site which is earmarked for commercial and PBSA uses in the Oxford Road Corridor Strategic Regeneration Framework Guidance (SRFG) endorsed by MCC in 2019. This application is accompanied by a comprehensive suite of technical documents, reports and plans.
- 1.1.2 The purpose of this desk-based study is to provide a preliminary assessment of the site relating to current and historic operations to establish baseline geo-environmental and geotechnical conditions. This report presents a factual account and highlights the more pertinent points with interpretation relating to potential sources of soil or groundwater contamination that may be present within site soils.
- 1.1.3 The information obtained during this assessment has also been used to collate a Preliminary Conceptual Site model for the proposed development to assist with the estimation of risks arising from contaminated land related concerns. Where required, this model will form the basis for future Phase 2 Intrusive Site Investigation works to further refine (and mitigate against) risks posed to future site users.

1.2 Terms of Reference

- 1.2.1 The proposed development is being brought forward by Alliance UBS Limited, which is a Joint Venture between Property Alliance Group (PAG) and Moda Living (Moda), and Williams Motor Co (Holdings), the seller.

**COMPLEX CHALLENGES ...
MADE SIMPLE**

1.3 Objectives

1.3.1 The objectives of the desk-based study were:

- To characterise the environmental setting of the site, including the geology, hydrogeology and hydrology of the site and surrounding areas from published data
- To identify (where possible) potential sources of ground, groundwater or surface water contamination and/or soil gas (hazardous materials) arising from past and/or current activities at the site and/or neighbouring properties
- To formulate a Preliminary Conceptual Site model and assess the risks posed to identified receptors soil and / or groundwater contamination or ground gas ingress
- As required, provide an initial indication of any intrusive site investigation works or remedial works required to ensure the sites safe redevelopment
- To undertake a preliminary geotechnical assessment of site conditions to identify potential abnormal items that may arise as a result of the site redevelopment

1.4 Scope of Work

1.4.1 The overall scope of work comprised reference to a Landmark 'Envirocheck' report as well as other published sources, and includes:

- Review of published geological, hydrogeological and hydrological information to establish environmental sensitivities at the site and within the surrounding environment
- Completion of a site walkover survey to establish present day site setting and conditions
- Review of historical map information to identify previous usage of the site and its immediate surroundings and search of a commercial environmental database, to identify potential sources of land contamination and potential environmental impacts
- Preparation of a report, outlining the findings and recommendations, including requirements for any further work considered necessary in order to better quantify any environmental hazards identified, and taking account of the site's current status

COMPLEX CHALLENGES ... MADE SIMPLE

1.5 Limitations of Study Assessment

- 1.5.1 The comments made in this report are based on the data available at the time of its completion. Any unusual or conflicting evidence discovered during any future site works must be presented to RoC Consulting as soon as possible so that any implications may be considered.
- 1.5.2 Additional information, changes in legislation or revised practices may necessitate re-interpretation of part or all of this report. Additionally, site redevelopment and/or a change in end use will require reinterpretation of the assessment.
- 1.5.3 The accuracy of the data supplied by third parties should be considered in the context of any known site conditions for which RoC Consulting cannot be held liable.
- 1.5.4 It should be noted that any subsequent revision of the proposed redevelopment or site boundary away from the above-mentioned drawing may result in the full or partial re-interpretation of this report and assessment.
- 1.5.5 The report has been produced by RoC Consulting for the client solely for the purposes of a review of information for the above-mentioned site. It may not be used by any person for any other purpose other than that specified without the express written permission of RoC Consulting. Any liability arising out of its use by a third party for purposes not wholly connected with the above shall be the responsibility of that party who shall indemnify RoC Consulting against all claims, costs, damages and losses arising out of such use.

**COMPLEX CHALLENGES ...
MADE SIMPLE**

2.0 Desk Top Review

- 2.0.1 The following chapter provides an overview to most salient findings of our desk based geo-environmental assessment. This information has been used to formulate the collation of a Preliminary Conceptual Site Model (as discussed in Section 3.0) to assess the potential impacts and risks associated with geo-environmental and geotechnical concerns across the site.
- 2.0.2 Supporting information and evidence has been provided within enclosed appendices and it is recommended reference be made to these documents / plans when reviewing this report.

2.1 Sources of Information

- 2.1.1 Background information on the site was acquired from the following sources:

- Envirocheck at the Ordnance Survey
- British Geological Survey 1" to 1 mile/1:10'000, solid & drift
- Environment Agency Groundwater Vulnerability Map
- Radon Atlas of England
- Observations from site walkover survey completed on the 25/03/21

2.2 Site Location and Description

- 2.2.1 The site is located to the south east of Manchester City Centre along the A34 (Upper Brook Street), Manchester (E38468, N397058). The site is of an irregular rectangular shape and approximately 2.13Ha in size, orientated north-west to southern east. It is bound by Kincardine Road to the east and north and Grosvenor Street at the northern-most extent. The A34 (Upper Brook Street) forms the west boundary, with the converted church and grounds forming part of the boundary. The southern boundary is formed by the fence-line of the former Citroen dealership garage. Inchley Road intersects through the centre of the site.
- 2.2.2 The northern site area comprises the former Williams car dealership with associated show rooms, repair garage and parking. The garage plot is vacant with no operations noted on site. The garage formerly dealt with new and used car sales and is not believed to have contained refueling facilities. However, used chemical and paint containers were noted during the site walkover and the site was known to be used for vehicle and bodywork repair. The topography of the site and surrounding area is predominantly flat, extending across the existing Inchley Road to the southern portion of the site, which is also a former Citroen car dealership show-room structure with associated vehicle workshop and car park.
- 2.2.3 Land use in the surrounding area comprises Gartside Gardens to the east and north with a mixture of residential housing / apartments beyond. To the west of the A34 are numerous University faculty buildings, with the former Citroen dealership to the immediate south of the site. Further to the north is the Mancunian Way and A34 junction, with a culverted section of the River Medlock approximately 300m north of the site.

**COMPLEX CHALLENGES ...
MADE SIMPLE**

- 2.2.4 During the site walkover it was noted the site contained a vehicle repair shop and re-spray area which can be considered a potential source of contamination arising from fuels, oils and paints associated with these activities. A mixture of concrete flooring and tarmac hard standing was across the site which will likely impede the movement of any contamination.
- 2.2.5 Away from this area, no further specific sources of contamination or potentially contaminative industrial activities were noted on the site at the time of inspection, however, it is noted a large electrical substation is immediately adjacent the north-east site area on the opposing side of Kincardine Road and may be a source of PCB contamination.
- 2.2.6 A selection of photographs showing the site at the time of inspection are provided within Appendix A.

COMPLEX CHALLENGES ... MADE SIMPLE

2.3 Site History

- 2.3.1 The site history has been compiled by reference to historical Ordnance Survey maps obtained from Envirocheck presented in Appendix B.

On site historical land uses

- 2.3.2 Early historical map records (1890) indicate the site formerly contained residential housing (across the central and southern extent) with a Sunday School, church and free library occupying land to the north. Numerous roads (Repton Street, Chorlton Terrace, Caygill Street, Rosamond Street) run across the site in a roughly south west to north east orientation. A print works and clothing factory were located immediately north of existing Inchley Road from 1931. The site remains in this configuration up to the post WW2 era when a number of residential houses are no longer evident (potentially from bomb damage); an engineering works is present at the southern extent from the 1950's onwards.
- 2.3.3 The entire area is cleared during the 1960's, during the redevelopment of the wider area (construction of Mancunian Way, University faculty buildings), with the mapping records showing an cleared site retaining the historical street layout. From the 1980's, the existing dealership garage is constructed (with removal of Repton Street, Chorlton Terrace, Caygill Street, Rosamond Street); with further commercial dealership buildings constructed in the 1990's (south of Inchley Road); forming the site's current layout.

Adjacent historical land uses

- 2.3.4 From the earliest mapping records (1893), the surrounding site area is predominantly terraced residential properties, with Rusholme Road Cemetery present 25m east of the site. A Baptist Church and Sunday school located between Upper Brook Street and the site's south western extent. A tramway is present along Upper Brook Street up until 1948. To the immediate north of the site is a tank (1930's; 44m north) and an electrical substation from 1948 (immediately NE) and a number of clothing factories and Brook Street Mills (100m north) with the River Medlock 150m beyond the site.
- 2.3.5 A major change occurs during the 1960's with the construction of the Mancunian Way to the north (and culverting of River Medlock); the development of the university campus and faculty buildings on to the west of the site is noted during this period; and extending 500m to the west to Oxford Road. During this development period, Rusholme Street Cemetery (20m east) becomes Gartside Gardens, and many of the surrounding works, tanks and factories are repurposed as commercial buildings or demolished.
- 2.3.6 Table 2.1 (provided overleaf) gives an overview to the locality and proximity of potentially contaminative land uses on and within close proximity to the site.

COMPLEX CHALLENGES ...
MADE SIMPLE

Table 2.1: Site History Overview

Distance (m)	Direction	Description	From	To
5	SW	Sunday School becomes Works	1951	1984
5	NW	Warehouse	1951	1967
5	S	Modern substation	1967	Present
15	NW	Electrical Sub Stat	1948	1967
20	SE	Works	1951	1991
20	NE	Rusholme Street Cemetery (becoming gardens)	1890	1967

180	N	Engineering works	1953	1967
200	NW	Open Watercourse culverted in 1967	1890	1967
210	S	Wire Works	1948	1967

2.4 Geology

2.4.1 Review of BGS geological map records indicate the site is underlain by the following:

Drift Geology: Glacial Till (diamicton), Devensian

Solid Geology: Chester Sandstone Formation

2.4.2 A search has also been completed using the BGS Borehole Scans facility to establish what (if any) historic site investigation or borehole data may be available for the development. A total of 9 publicly available borehole records are noted within or adjacent to the site.

2.4.3 Records to the north of the site (e.g. SJ89NW2012) indicate demolition type fill material to 2.5mbgl overlying a firm to stiff glacial clay. The weathered fraction of the Sandstone Bedrock occurs at a depth circa 6.9m below ground (31.55mAOD).

2.4.4 A total of 8 boreholes are available for the south portion of the site, with the records indicating variable depths of made ground present across this portion of the site, from 2.0m to locally up to 4.2m in depth beneath the existing Citroen dealership. Underlying this is a combination of dense Sand and Gravel and Sandstone bedrock. The depth to rockhead ranges from 6.9m (northwest) and 4.2mbgl (southeast).

COMPLEX CHALLENGES ... MADE SIMPLE

- 2.4.5 Groundwater was noted at 8.0mbgl north of the site and was not encountered in the southern portion of the site. No contamination was noted, however, ashy made ground is present beneath the site.
- 2.4.6 BSG Map records show the site is underlain by the West Manchester Fault, running approx. 75m to the south west of the site. The fault runs in a roughly north west to south east orientation with the north easterly down thrown.

Mining

- 2.4.7 The Envirocheck report (Appendix C) indicates that the site is located in an area which may be affected by historic Coal Mining or Brine extraction, however, with reference to the above-mentioned geological map records it is apparent the site falls outside an area where Coal Measures bedrock is present at shallow depth. In addition, we are not aware of any commercial mineral or below ground mining workings within the Triassic Sandstone formation that underlies the site. As such, it is considered a Coal Authority report is not warranted at this time.

Radon

- 2.4.8 According to the environmental database search, the site is in an area where radon protection measures are not required for new dwellings.

Ground Stability

- 2.4.9 Table 2.2 indicates the potential ground stability hazards on site, as obtained from the Envirocheck report.

Table 2.2: Ground Stability Hazards

Ground Stability Hazard	Risk Rating
Collapsible Ground	Very Low
Compressible Ground	No Hazard
Ground Dissolution	No Hazard
Landslide	Very Low
Running Sand	Very Low
Shrinking or Swelling Clay	Very Low

**COMPLEX CHALLENGES ...
MADE SIMPLE**

Soil Chemistry

- 2.4.10 Table 2.3 indicates the background estimated soil chemistry for the site, as obtained from the site sensitivity maps within Appendix D.

Table 2.3: BGS Estimated Soil Chemistry

Determinant	Concentration
Arsenic	15 – 25 mg/kg
Cadmium	<1.8 mg/kg
Chromium	60 – 90 mg/kg
Lead	100 - 200 mg/kg
Nickel	30 - 45 mg/kg

2.5 Hydrological

- 2.5.1 The Envirocheck Groundwater Vulnerability Map indicates the superficial deposits are classified as a productive Secondary A aquifer (low vulnerability) with the underlying bedrock designated as a Principal Aquifer. It is noted that a portion of the southern extents of site are classified as Secondary Undifferentiated.
- 2.5.2 The site is not located within an Environment Agency Source Protection Zone
- 2.5.3 The site is not located in close proximity to any sensitive groundwater abstraction points (e.g. for a potable water supply well). The nearest water abstraction point is indicated over 380m to the west relating a borehole abstraction at Manchester Metropolitan University. Water is abstracted for “general use” and the permit is still active.
- 2.5.4 The nearest surface water feature is indicated 130m to the north in the form of the River Medlock. Water quality of this receptor indicates a GQA Grade of “E” (Poor; 2000) and a flow rate of less than 0.31cumecs.
- 2.5.5 There are no active surface water abstractions at the site or within 500m of the site boundary.
- 2.5.6 The nearest discharge consent is indicated 208m to the north west held by United Utilities for the release of storm sewage overflow into freshwater river.
- 2.5.7 A single historic pollution incident has been noted in close proximity to the site, relating to a Category 3 (minor incident) into the River Medlock (220m NW), however no pollution was found (1995).
- 2.5.8 The Envirocheck database indicates that there have been no prosecutions relating to controlled waters or industrial processes within 500m of the site.
- 2.5.9 The site is located within an area considered to be at risk from flooding, with limited potential for groundwater flooding to occur. The risk of flooding from surface water is rated as low (1000-year return) and at risk of extreme flooding from Rivers or Sea without defences (Zone 2).

COMPLEX CHALLENGES ... MADE SIMPLE

2.6 Hazardous Substances

- 2.6.1 There are no active Control of Major Accident Hazards Sites (COMAH), Explosive Sites, Notification of Installations Handling Hazardous Substances (NIHHS), Planning Hazardous Substance Consents, or Planning Hazardous Substance Enforcements within 500m of site.
- 2.6.2 There are a number of active Registered Radioactive Substances within 500m of the site, relating to University of Manchester having authorisation of disposal of radioactive waste 160m southwest of the site and 338m southwest. University hospitals (400m southwest) are registered for the keeping and use of radioactive materials.

2.7 Landfill Sites and Other Waste Facilities

- 2.7.1 There are no active BGS recorded landfill sites, local authority recorded landfill sites, registered or historic landfill sites within a 500m radius of the site.
- 2.7.2 There are no Licensed Waste Management Facilities, waste treatment sites or registered waste transfer stations located at the site or within 500m of the site boundary.

2.8 Industrial Land Use & Processes

- 2.8.1 There are no Contaminated Land Register Entries and Notices (CLREN), Local Authority Pollution Prevention and Controls (LAPPC), Integrated Pollution Control (IPC), Integrated Pollution Prevention Control (IPPC) or Local Authority Pollution Prevention and Control Enforcements (LAPPCE) relating to authorised processes at the site or within 250m of the site boundary.
- 2.8.2 Contemporary trade directory entries indicate there are potentially contaminative activities on the site relating to the former Williams car dealership building with mechanic garage (in the area of site north of Inchley Road), although this is no longer active. Active entries for the immediate area indicate activity includes a car dealer immediately to the south east of the site, and a printer's service located 60m north alongside a coal and smokeless fuel merchant. A chemical distributor and wholesalers are also located 50m to the northwest.
- 2.8.3 The nearest fuel station entry is indicated 445m to the east comprising the Ardwick Green Express and is open.

2.9 Environmentally Sensitive Areas

- 2.9.1 The Envirocheck database indicates that there are no Nitrate Vulnerable Zones (NVZ), Special Protection Areas (SPAs), Sites of Special Scientific Interest (SSSI) or areas of adopted green belt.

2.10 Ecological Setting & Invasive Plant Species

- 2.10.1 There are / are no sites of Special Biological Interest (SBI), Special Areas of Conservation (SAC) or nature reserves at the site or within 250m of the site boundary.
- 2.10.2 No evidence of invasive plant species was noted during the course of the site walkover survey, although, it should be noted the inspection did not comprise a detailed ecological assessment.

2.11 Unexploded Ordnance

- 2.11.1 A review of bombing records indicates the site to be affected by bombing during WW2. As shown below, a firebomb impact was recorded adjacent the Baptist Church, with damage to existing structures in the northern extents.
- 2.11.2 Buildings were completely demolished by a high explosive impact recorded adjacent to the northern site extents, with a second high explosive recorded hitting the roadway at the southern site extents.

- 2.11.3 In view of the above anecdotal information, it would be considered prudent to appoint a UXO Specialist to further consider and comment on the risks posed by WW2 enemy action via the completion of a desk-based threat assessment. The need for mitigation and monitoring measures may also be required during any intrusive ground investigation and subsequent construction works.

COMPLEX CHALLENGES ... MADE SIMPLE

2.12 Former Site Investigation Information

- 2.12.1 At the time of writing no historic site investigation information was available for the site; reference has been made to geological map records and / or historical borehole information (as discussed in Section 2.4) when collating the Preliminary Conceptual Site Model.

2.13 Redevelopment Proposals

- 2.13.1 The Site is identified for redevelopment within the Oxford Road Corridor Strategic Regeneration Framework Guidance (SRFG) with mixed commercial uses, purpose built student accommodation, and high-density development identified as being a priority for the UBS site. The Proposed Development forms one element of the wider Upper Brook Street Illustrative Masterplan which can be seen within the submitted Supporting Planning Statement. The wider illustrative masterplan proposals are being brought forward collaboratively by Property Alliance Group, Moda Living, McLaren Property and Kadans Science Partner. The illustrative masterplan intends to transform the currently vacant sites, re-establishing their important role in the area by re-introducing permeability, public realm, and active community-facing uses at ground floor. The emerging masterplan includes almost 3 acres of new public realm and green spaces, two new public squares, as well as a series of high-quality new buildings of varying heights to provide for c.700,000ft² of sci-tech/life sciences uses, over 1,800 purpose-built student accommodation beds, and c. 25,000ft² of active ground floor uses.

3.0 Preliminary Conceptual Site Model

- 3.0.1 The information obtained during the desk-based study has been reviewed to establish the Preliminary Conceptual Model for the site. This model is based around the Source / Pathway / Receptor methodology as outlined in Fig 3.0.

Figure 3.0 Source Pathway Receptor Diagram

- 3.0.2 Risk assessment is the process of collating known information on a hazard or set hazards in order to establish actual or potential risks to receptors. The receptor may be human health, controlled waters, a sensitive local ecosystem or even construction materials. Receptors can be connected with the hazard under consideration via one or several exposure pathways (e.g. the pathway of direct skin contact and oral exposure).
- 3.0.3 Risks are generally managed by isolating or removing the hazard, isolating the receptor, or by intercepting the exposure pathway. Without the three essential components of a source (hazard), pathway and receptor, there is deemed to be no risk. In other words, the mere presence of a hazard at a site does not mean that there will necessarily be risks.
- 3.0.4 A CLEA CLR 8 provides a selection of contaminants that may be relevant for the assessment of contaminated land, based on site usage, because they are likely to be found on a large number of industrial sites in the UK and have the potential to affect human health and the environment. The CLEA CLR 8 documentation, along with other relevant guidance, forms the basis against which the site has been assessed.

COMPLEX CHALLENGES ... MADE SIMPLE

- 3.0.5 A Preliminary desk-based risk assessment has been completed for the site utilising the current and historical environmental information available (as outlined in Section 2.0 of this report). Where available historic ground investigation information has also been employed to complement documentary evidence.
- 3.0.6 The geo-environmental risk assessment has been completed in accordance with the guidelines and principals of the Environment Agency CLEA Methodology and with reference to the guidance outlined within CIRIA 552 "Contaminated land risk assessment. A good practice guide". This risk assessment methodology considers the potential consequence / severity of risks that may be present within soils in comparison with the likelihood of exposure to or and occurrence of said risk.
- 3.0.7 A range of risk classifications are provided within CIRIA 552 further details of which are provided in Table 3.0 below.

Table 3.0: Definition of risk class and consequence

Risk Class	Definition	Example
Minor	Potential for harm, although not significant, which may result in financial loss to resolve. Ground conditions where the use of PPE would readily mitigate risks posed to human health.	Low level contamination hotspots within made ground / demolition fill materials. Stunted or impeded plant growth due to poor soil quality.
Mild	Pollution of non-sensitive water resources or damage to crops, plant growth, below ground utilities or structures.	Perched groundwater contamination overlying low permeability aquifer or aggressive sulphate concentrations in soils.
Medium	Sources of contamination identified on site have the potential to cause both long and short-term health effects on site residents / users. Alternatively (or in conjunction with) sources of contamination may have the potential to impact surface or groundwater quality or impede vegetation growth.	Elevated concentrations of hydrocarbon contamination reported within topsoil tested within residential gardens as a result of inadequate or incomplete previous remediation works. Movement of contaminated groundwater from leaking below ground storage tank into adjacent surface water course.
Severe	Sources of contamination pose a credible and acute risk to human health with potential for "Significant Harm" occurring as defined by the Part IIA of the Environmental Protection Act (1990). Alternatively (or in conjunction with risks posed to human health) sources of contamination may pose an immediate risk to controlled water resources or ecosystems.	Grossly contaminated soils are encountered or disturbed during excavation works, causing an immediate release of toxic soil vapour and leachate / contaminated groundwater flow across adjacent land.

**COMPLEX CHALLENGES ...
MADE SIMPLE**

- 3.0.8 As previously discussed the contaminated land risk assessment model evaluates both the severity of risks that may be present within soils / groundwaters in the context of threats posed to identified receptors before deriving the actual risk rating based on the probability of occurrence. Table 3.1 (provided overleaf) outlines the range likelihood of risk.

Table 3.1: Probability Assessment

Classification	Definition
High likelihood	A credible pollutant linkage has been identified and it is very likely contaminants will impact identified receptors in both the short or long term (or is already actively doing so). The potential for harm to be caused is thus highly likely.
Likely	Pollutant linkages between the sources of contamination and identified receptors are present and it is considered likely they will become active given the right set of circumstances (e.g. contaminants currently buried below ground that are likely to be exposed or disturbed during construction / excavation works. The circumstances are such that an event is not inevitable, however it is possible in the short term and likely over the longer term.
Low likelihood	A theoretical pollutant linkage has been identified that has the potential to exposure receptors to contaminants under the correct circumstances. However, the likelihood of such an event occurring is not a certainty, even in the long term
Unlikely	There is no / minimal likelihood a pollutant linkage would occur, even over the long term.

- 3.0.9 The risk assessment process is a combination of probability and consequence, recognising that it may be possible to have a significant source of contamination beneath a site (such as a large below ground chemical storage tank) that may only present a relatively moderate to low risk (owing to the fact it may be contained within a secure concrete bund). Table 3.2 indicates how the actual nature of risk is established with Table 3.3 illustrating how the risk is interpreted in the context of contaminated land risk assessment.

Table 3.2: Risk Definition

		Consequence			
		Severe	Medium	Mild	Minor
Probability	High Likelihood	Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk
	Likely	High Risk	Moderate Risk	Moderate / Low Risk	Low Risk
	Low Likelihood	Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate / Low Risk	Low Risk	Very Low Risk	

**COMPLEX CHALLENGES ...
MADE SIMPLE**

Table 3.3: Description of risks posed

Risk Definition	Description
Very High	Active pollutant linkages between a significant source of contamination and identified receptors have been established and there is a high likelihood of severe harm occurring to said receptors unless immediate investigation and remediation action is not taken.
High Risk	Harm is likely to arise to receptors from an identified hazard in the short and long term. Urgent investigation of the contaminant issue will be required, and remedial treatment is likely.
Moderate Risk	The possibility of harm has been identified toward receptors under the right circumstances, although the severity of harm would be relatively mild. Further investigation of identified issues would be prudent and possible need for remedial measures in the long term.
Low Risk	It is possible harm could arise to a designated receptor from identified hazard, but it is likely (if realised) any harm would be (at worst) mild.
Very Low Risk	No significant pollutant linkages have been identified and the possibility of harm occurring to receptors is low.

Potential Sources

3.0.10 Based on the current / historical uses of the site, and the surrounding area, the following potential sources of contamination / abnormal items have been identified:

- On site Made Ground associated demolition of former buildings across the site, contaminants likely to include Heavy Metals, Asbestos containing material and Poly Aromatic Hydrocarbons. Potential presence of deeper areas of made ground also likely associated with demolition of residential properties and potential infilling of below ground basement structures.
- On site potential contamination associated with historical print work activities (asbestos, inorganics, PCBs, fuels / oil, organic solvents) and existing vehicle workshop (fuels, paints and oils)
- On site generation of ground gas associated Made Ground deposits on site potential migration across the site
- Potential on site movement of ground gas associated with nearby historic cemetery.

**COMPLEX CHALLENGES ...
MADE SIMPLE**

Potential Pathways and Receptors

3.0.11 The following potential pathways and receptors have been identified for the above potential sources of contamination:

- End users of the site (future site users) could be at risk of exposure to contaminated soils / materials at the site via ingestion, direct contact and inhalation of contaminated dust / vapours / hazardous gas.
- Construction persons could also be at risk of exposure to contaminated soils via ingestion, direct contact and inhalation of contaminated dust / vapours / hazardous gas.
- Leaching of potential contaminants into the bedrock aquifer beneath the site
- Below ground structures such as concrete foundations or water supply pipe work could be at risk of chemical attack and damage as a result of aggressive ground conditions.

3.0.12 Table 3.4 (provided overleaf) assess and summarise the pollutant linkages that may exist at the site; the assessment has assumed that the site is to be redeveloped for mixed use commercial interspersed with residential apartment style high rise and associated below ground basement parking.

**COMPLEX CHALLENGES ...
MADE SIMPLE**

Table 3.4		Preliminary Conceptual Site Model					
Source		Pathway	Receptor	Severity	Probability	Risk definition	Comments
On Site	Ground Conditions, including Made Ground	Dermal contact and / or ingestion; inhalation of vapours / dusts	Current Site Users	Medium	Unlikely	Low	The site is covered with buildings and hardstanding, as such there is no existing pathway for potential contamination (Asbestos, metals, PAHs), present within the made ground, to pose a risk to current site users
			Construction workers	Medium	Low	Low / Moderate	Construction persons are considered to be at the greatest risk of exposure to contaminants during the site's redevelopment. The severity of any contamination that may be present will need to be quantified via Phase 2 Ground Investigation works.
			Future Site Users	Medium	Unlikely	Low	The site is to be developed to comprise mixed use commercial and residential with hardstanding coverage proposed. It considered future site users / residents / maintenance persons are at a low risk of exposure to sources of contamination as outlined above
			Ecological [Plant Uptake]	Minor	Unlikely	Very Low	The site is not in close proximity to a SSSI, woodland, green belt and no invasive species were noted during the site walkover, with proposals likely utilising hardstanding in landscape areas
	Historical Contaminative feature(s) (print works; vehicle workshops)	Dermal contact and / or ingestion; inhalation of vapours / dusts	Current Site Users	Medium	Unlikely	Low	Historical activities indicate the potential for asbestos, inorganics, PCBs, fuels / oil, organic solvent contamination. As previously noted, the site is currently hardstanding, there is no existing pathway for potential contamination present within the made ground, to pose a risk to current site users
			Construction workers	Medium	Low	Low / Moderate	Construction persons are considered to be at the greatest risk of exposure to contaminants during the site's redevelopment. Risks to be confirmed via intrusive Phase 2 ground investigations.
			Future Site Users	Medium	Unlikely	Low	The site is to be developed to comprise mixed use commercial and residential with hardstanding coverage proposed. It considered future site users / residents / maintenance persons are at a low risk of exposure to sources of contamination as outlined above
	Ground Conditions, including historical activities	Leaching of contaminated soil & impact beneath site	Controlled Waters: Aquifer	Medium	Low	Low / Moderate	The underlying bedrock aquifer is classified as a Principal Aquifer. The site is note located within a SPZ, with the nearest surface water feature is indicated 130m to the north in the form of the River Medlock. Water quality of this receptor indicates a GQA Grade of "E" (Poor). Whilst there is limited evidence to suggest gross contamination of site soils, the leaching of contaminated soils into the bedrock may pose a risk to the principal aquifer, particularly given its relatively shallow depth beneath the site
			Controlled Waters: Surface Water	Medium	Unlikely	Low	

**COMPLEX CHALLENGES ...
MADE SIMPLE**

Table 3.4		Preliminary Conceptual Site Model					
Source		Pathway	Receptor	Severity	Probability	Risk definition	Comments
			Adjacent Sites	Mild	Likely	Low	There are no SPZ, groundwater abstractions with close proximity to the site. Historical above ground tanks and sub-station is noted within close proximity of northern site boundary and may be likely some contamination is present within made ground deposits but of a low risk to the site. This will need confirming as part of the Phase 2 SI.
		Below ground service runs	Below ground infrastructure & construction	Mild	Likely	Low / Moderate	The desk-based assessment has identified credible sources of contamination within the site and it is possible chemically aggressive ground conditions may be present as a result. The precise nature of risks should be confirmed via intrusive site investigation works.
On Site	Ground Gas Generation	Migration / Accumulation	Current Site Users	Severe**	Unlikely	Low - Moderate	There is a potential for in-filled basement structures relating to historical residential buildings which may be a source of gas generation. The site is predominantly open with exception to the two commercial showroom buildings but given the relatively recent age of the structures, it is considered there to be minimal risk to current users.
			Construction workers	Severe**	Unlikely	Low - Moderate	There are potential made ground deposits present on site associated with the demolition of historical buildings. It is deemed unlikely they present any significant ground gas risk however ground gas should be assessed during the intrusive investigation works by implementing personal gas detection monitors in below ground excavations.
			Future Site Users	Severe**	Unlikely	Low - Moderate	There is a potential for made ground deposits present on site associated with the demolition of historical buildings. It is deemed unlikely they present any significant ground gas risk however ground gas should be assessed during the Phase 2 intrusive investigation works to assign a characteristic risk for the proposed development.
			Proposed development	Severe**	Unlikely	Low - Moderate	
Off Site	Potentially Contaminative Sources;	Leaching of contaminated soil onto site	Controlled Waters: Aquifer	Medium	Unlikely	Low	Historical above ground tanks and sub-station is noted within 50m of northern site boundary, with an unidentified works present until 1980's in the former Sunday school immediately adjacent the site. Therefore, the

**COMPLEX CHALLENGES ...
MADE SIMPLE**

Table 3.4		Preliminary Conceptual Site Model					
Source		Pathway	Receptor	Severity	Probability	Risk definition	Comments
	Controlled waters and ground gas generation		Controlled Waters: Surface Water	Minor	Unlikely	Low	risk is based on adjacent site uses and historical activities with potential to impact the development in relation to underlying geology. It is noted glacial clay is present which has low permeability rate, limiting migration.
		Ground gas Migration / Accumulation	Construction workers	Severe	Unlikely	Low - Moderate	There is limited potential for ground gas migration from adjacent site sources; the historic cemetery is a potential source but given the timescale since closure and redevelopment it is unlikely to pose a risk. The site is not located in close proximity to landfilling operations, significantly in-filled land or shallow mine workings but is a heavily developed area and the presence of extensive made ground deposits surrounding the site is likely. It is deemed unlikely they present any significant ground gas risk however ground gas should be assessed during the intrusive investigation works by implementing personal gas detection monitors in below ground excavations.
			Future Site Users	Severe	Unlikely	Low - Moderate	There is a potential for made ground deposits present adjacent the site associated with the demolition of historical buildings. It is deemed unlikely they present any significant ground gas risk however ground gas should be assessed during the intrusive investigation works to assign a characteristic risk for the proposed development
			Proposed development	Severe	Unlikely	Low - Moderate	

****Gas Severity set as Severe (gas) rating due to risk to human health (asphyxiation), proposed development (explosion).**

*** It is considered the risks posed to construction personnel, by sources of contamination, can be adequately mitigated against via the use of full PPE and the adoption of good hygiene and site practices. As required, any suspected sources of contamination discovered during the site's development should be brought to the immediate attention of RoC Consulting to enable the implications to be established and appropriate remedial recommendations made. In the event of such a discovery the scope and findings of the current assessment will require re-assessment and revision**

COMPLEX CHALLENGES ...
MADE SIMPLE

4.0 Conclusions & Recommendations

4.0.1 A Phase 1 Desktop Study was completed by RoC Consulting for Property Alliance Group on behalf of Williams Motor Co (Holdings) and Alliance UBS Limited, to establish the potential ground conditions and quality and to support a full planning application for a life sciences and purpose-built student accommodation (PBSA) development (hereafter referred to as the 'Proposed Development') on Phase Two of the Upper Brook Street Masterplan (hereafter referred to as the 'Site'). The Site is identified for redevelopment within the Oxford Road Corridor Strategic Regeneration Framework Guidance (SRFG) with mixed commercial uses, purpose built student accommodation, and high-density development identified as being a priority for the UBS site. The Proposed Development forms one element of the wider Upper Brook Street Illustrative Masterplan which can be seen within the submitted Supporting Planning Statement. The wider illustrative masterplan proposals are being brought forward collaboratively by Property Alliance Group, Moda Living, McLaren Property and Kadans Science Partner. The illustrative masterplan intends to transform the currently vacant sites, re-establishing their important role in the area by re-introducing permeability, public realm, and active community-facing uses at ground floor. The emerging masterplan includes almost 3 acres of new public realm and green spaces, two new public squares, as well as a series of high-quality new buildings of varying heights to provide for c.700,000ft² of sci-tech/life sciences uses, over 1,800 purpose-built student accommodation beds, and c. 25,000ft² of active ground floor uses.

4.0.2 The desk-based assessment has identified the following:

- Current site condition comprises the former Williams car dealership with associated show rooms, repair garage and parking. The garage plot is vacant with no operations noted on site. The garage formerly dealt with new and used car sales and is not believed to have contained refuelling facilities. However, used chemical and paint containers were noted during the site walkover and the site was known to be used for vehicle and bodywork repair. The topography of the site and surrounding area is predominantly flat, extending across the existing Inchley Road to the southern portion of the site, which is also a vacant former Citroen car dealership show-room structure with associated vehicle workshop and car park.
- The site formerly contained residential housing, with print works and clothing factory present. The site was subject to bomb damage in WW2 following a significant portion was cleared during the 1960's (as part of the redevelopment of the wider area. The site was redeveloped into its current layout, featuring the existing former William's dealership from 1980's and the Citroen dealership south of Inchley Road from 1990's.
- Publicly available BGS borehole records for the area indicate ground conditions are likely to comprise demolition type fill material to 2.5mbgl, overlying a firm to stiff glacial clay in the northern section. The southern section of the site has variable depths of made ground, from 2.0m up to

COMPLEX CHALLENGES ... MADE SIMPLE

4.2m in depth beneath the existing Citroen dealership. Underlying this is a combination of dense Sand and Gravel and Sandstone bedrock. The depth to weathered rockhead ranges from 6.9m / 31.55mAOD (northwest) and 4.2mbgl / 34.25mAOD (southeast)

- The site is not affected by sensitive land uses (SPZs, SSSI etc) and there are no groundwater abstractions or discharge consents within close proximity to the site. The underlying sandstone bedrock is designated as a Principal Aquifer and is a potential receptor for contamination. Whilst there is limited evidence to suggest gross contamination of site soils as a result of current / historical operations, the leaching of contaminated soils into the bedrock may pose a risk to the principal aquifer.
 - Historical activities indicate the potential for asbestos, inorganics, PCBs, fuels / oil, organic solvent contamination with Made Ground deposits, and the presence of in-filled basement structures in the demolished residential properties gives rise to a potential ground gas generation and migration risk.
- 4.0.3 The desk-based assessment has identified credible sources of contamination within the site, and it is possible chemically aggressive ground conditions may be present as a result. The precise nature of risks should be confirmed via intrusive site investigation works.
- 4.0.4 As such it is recommended that a programme of site investigation works be completed to further investigate the quality and composition of site soils with respect to risks posed by sources of contamination and ground gas ingress. Consideration should also be given to establishing the foundation design parameters and sufficient geotechnical information to support new building design.
- 4.0.5 In addition to the above, it would be considered prudent to appoint a UXO Specialist to further consider and comment on the risks posed by WW2 enemy action via the completion of a desk-based threat assessment. The need for mitigation and monitoring measures may also be required during any intrusive ground investigation and subsequent construction works.

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Manchester

Published 1975

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Lancashire And Furness

Published 1851

Source map scale - 1:1,056

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1891 - 1908

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to complement the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1973 - 1975

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Agency & Hydrological					
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes	Yes	n/a
Contaminated Land Register Entries and Notices					
Discharge Consents	pg 1		5	23	53
Prosecutions Relating to Controlled Waters			n/a	n/a	n/a
Enforcement and Prohibition Notices					
Integrated Pollution Controls					
Integrated Pollution Prevention And Control	pg 21				1
Local Authority Integrated Pollution Prevention And Control					
Local Authority Pollution Prevention and Controls	pg 21			1	11
Local Authority Pollution Prevention and Control Enforcements	pg 23				1
Nearest Surface Water Feature	pg 23			Yes	
Pollution Incidents to Controlled Waters	pg 23		1	6	11
Prosecutions Relating to Authorised Processes					
Registered Radioactive Substances	pg 26		9	25	32
River Quality	pg 37		2		2
River Quality Biology Sampling Points					
River Quality Chemistry Sampling Points					
Substantiated Pollution Incident Register					
Water Abstractions	pg 38			4	10 (*17)
Water Industry Act Referrals					
Groundwater Vulnerability Map	pg 45	Yes	n/a	n/a	n/a
Groundwater Vulnerability - Soluble Rock Risk			n/a	n/a	n/a
Groundwater Vulnerability - Local Information			n/a	n/a	n/a
Bedrock Aquifer Designations	pg 46	Yes	n/a	n/a	n/a
Superficial Aquifer Designations	pg 46	Yes	n/a	n/a	n/a
Source Protection Zones	pg 46		1		
Extreme Flooding from Rivers or Sea without Defences	pg 46	Yes	Yes	n/a	n/a
Flooding from Rivers or Sea without Defences	pg 47		Yes	n/a	n/a
Areas Benefiting from Flood Defences				n/a	n/a
Flood Water Storage Areas				n/a	n/a
Flood Defences				n/a	n/a
OS Water Network Lines	pg 47		2	5	24

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Waste					
BGS Recorded Landfill Sites					
Historical Landfill Sites					
Integrated Pollution Control Registered Waste Sites					
Licensed Waste Management Facilities (Landfill Boundaries)					
Licensed Waste Management Facilities (Locations)	pg 51				5
Local Authority Landfill Coverage	pg 52	1	n/a	n/a	n/a
Local Authority Recorded Landfill Sites					
Potentially Infilled Land (Non-Water)					
Potentially Infilled Land (Water)	pg 52		3	5	28
Registered Landfill Sites					
Registered Waste Transfer Sites	pg 54				1
Registered Waste Treatment or Disposal Sites	pg 54				2
Hazardous Substances					
Control of Major Accident Hazards Sites (COMAH)					
Explosive Sites					
Notification of Installations Handling Hazardous Substances (NIHHS)					
Planning Hazardous Substance Consents					
Planning Hazardous Substance Enforcements					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Geological					
BGS 1:625,000 Solid Geology	pg 56	Yes	n/a	n/a	n/a
BGS Estimated Soil Chemistry	pg 56	Yes	Yes	Yes	Yes
BGS Recorded Mineral Sites					
BGS Urban Soil Chemistry	pg 58		Yes	Yes	Yes
BGS Urban Soil Chemistry Averages	pg 61	Yes			
CBSCB Compensation District			n/a	n/a	n/a
Coal Mining Affected Areas	pg 61	Yes	n/a	n/a	n/a
Mining Instability			n/a	n/a	n/a
Man-Made Mining Cavities	pg 62		1		
Natural Cavities					
Non Coal Mining Areas of Great Britain				n/a	n/a
Potential for Collapsible Ground Stability Hazards	pg 62	Yes	Yes	n/a	n/a
Potential for Compressible Ground Stability Hazards	pg 62		Yes	n/a	n/a
Potential for Ground Dissolution Stability Hazards				n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 62	Yes	Yes	n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 62	Yes	Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 62	Yes	Yes	n/a	n/a
Radon Potential - Radon Affected Areas			n/a	n/a	n/a
Radon Potential - Radon Protection Measures			n/a	n/a	n/a
Industrial Land Use					
Contemporary Trade Directory Entries	pg 64	4	20	42	423
Fuel Station Entries	pg 107			1	3
Points of Interest - Commercial Services	pg 108			15	94
Points of Interest - Education and Health	pg 117				17
Points of Interest - Manufacturing and Production	pg 118		3	15	89
Points of Interest - Public Infrastructure	pg 128			10	28
Points of Interest - Recreational and Environmental	pg 131		3	2	16
Gas Pipelines					
Underground Electrical Cables					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Sensitive Land Use					
Ancient Woodland					
Areas of Adopted Green Belt					
Areas of Unadopted Green Belt					
Areas of Outstanding Natural Beauty					
Environmentally Sensitive Areas					
Forest Parks					
Local Nature Reserves					
Marine Nature Reserves					
National Nature Reserves					
National Parks					
Nitrate Sensitive Areas					
Nitrate Vulnerable Zones					
Ramsar Sites					
Sites of Special Scientific Interest					
Special Areas of Conservation					
Special Protection Areas					
World Heritage Sites

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.
