Planting Methodology

We have provided detailed plant specifications with regards to their size, specification, density and number. The planting concept is blocks of individual species within beds. The methodology for planting is to not specifically define the location of individual plants. The plants will be laid out according to the Contractor's wishes- with the following parameters to be followed. The intention of the plan is that the planting will have a naturalistic approach.

Mixed Beds

Individual species to be grouped in odd numbers (where possible) of 5, 7 & 9 etc. Distribute groups of species throughout the whole bed as illustrated on the planting plan.

Schedule

Schedule shows total quantities and areas across all levels. Please refer to drawing number 3100 for full schedule.
