1.0 Introduction

1.1 Background

1.1.1 RoC Consulting has been appointed by FSC MCR Ltd. to conduct a Phase 1 Desktop Land Contamination Study and site walkover at land at Irk Street (the site). This report has been prepared to accompany an application for full planning permission for the temporary change of use of the site and existing buildings to an arts and cultural venue/event space (Sui Generis), with associated food and drink space (Flexible Use Class E / Sui Generis). The proposals should be entirely covered in hardstanding as the site currently exists and will involve no breaking of ground or significant construction.

1.1.2 The purpose of this desk-based study is to provide a preliminary assessment of the site relating to current and historic operations to establish baseline geo-environmental and geotechnical conditions. This report presents a factual account and highlights the more pertinent points with interpretation relating to potential sources of soil or groundwater contamination that may be present within site soils.

1.1.3 The information obtained during this assessment has also been used to collate a Preliminary Conceptual Site model for the proposed development to assist with the estimation of risks arising from contaminated land related concerns.

1.2 Terms of Reference

1.2.1 The desk-based environmental assessment was carried out following receipt of an instruction from the applicant.

1.3 Objectives

1.3.1 The objectives of the desk-based study were:

- To characterise the environmental setting of the site, including the geology, hydrogeology and hydrology of the site and surrounding areas from published data
- To identify (where possible) potential sources of ground, groundwater or surface water contamination and/or soil gas (hazardous materials) arising from past and/or current activities at the site and/or neighbouring properties
- To formulate a Preliminary Conceptual Site model and assess the risks posed to identify receptors soil and / or groundwater contamination or ground gas ingress
- As required, provide an initial indication of any intrusive site investigation works or remedial works required to ensure the safety of the site for the proposed future use

- To undertake a preliminary geotechnical assessment of site conditions to identify potential abnormal items that may arise as a result of the site redevelopment

1.4 Scope of Work

1.4.1 The overall scope of work comprised reference to a Landmark 'Envirocheck' report as well as other published sources, and includes:

- Review of published geological, hydrogeological and hydrological information to establish environmental sensitivities at the site and within the surrounding environment
- Completion of a site walkover survey to establish present day site setting and conditions
- Review of historical map information to identify previous usage of the site and its immediate surroundings and search of a commercial environmental database, to identify potential sources of land contamination and potential environmental impacts
- Preparation of a report, outlining the findings and recommendations, including requirements for any further work considered necessary in order to better quantify any environmental hazards identified, and taking account of the current status of the site

1.5 Limitations of Study Assessment

1.5.1 The comments made in this report are based on the data available at the time of its completion. Any unusual or conflicting evidence discovered during any future site works must be presented to RoC Consulting as soon as possible so that any implications may be considered.

1.5.2 Additional information, changes in legislation or revised practices may necessitate re-interpretation of part or all of this report. Additionally, site redevelopment and/or a change in end use will require reinterpretation of the assessment.

1.5.3 The accuracy of the data supplied by third parties should be considered in the context of any known site conditions for which RoC Consulting cannot be held liable.

1.5.4 It should be noted that any subsequent revision of the proposed redevelopment or site boundary away from the above-mentioned drawing may result in the full or partial re-interpretation of this report and assessment.

1.5.5 The report has been produced by RoC Consulting for the client solely for the purposes of a review of information for the above-mentioned site. It may not be used by any person for any other purpose other than that specified without the express written permission of RoC Consulting. Any liability arising out of its use by a third party for purposes not wholly connected with the above shall be the responsibility of that party who shall indemnify RoC Consulting against all claims, costs, damages and losses arising out of such use.

2.0 Desk Top Review

2.0.1 The following chapter provides an overview to most salient findings of our desk based geo-environmental assessment. This information has been used to formulate the collation of a Preliminary Conceptual Site Model (as discussed in Section 3.0) to assess the potential impacts and risks associated with geo-environmental and geotechnical concerns across the site.

2.0.2 Supporting information and evidence has been provided within enclosed appendices and it is recommended reference be made to these documents / plans when reviewing this report.

2.1 Sources of Information

2.1.1 Background information on the site was acquired from the following sources:

- Envirocheck at the Ordnance Survey
- British Geological Survey 1" to 1 mile/1:10'000, solid & drift
- Environment Agency Groundwater Vulnerability Map
- Radon Atlas of England
- Observations from site walkover survey completed on the 02/05/2023
- Previous site investigation reported completed by WSP (REPORT NO 70020194-EV2/10687(1)) Proposed Development at Plots 2,3,4 & 5 Angel Meadow, Manchester

2.2 Site Location and Description

2.2.1 The site is centred around National Grid Ref 384506, 399260 and covers an area of circa 0.18ha. The site currently comprises a former MOT testing and other disused vehicle servicing business and associated hardstanding. All buildings within the curtilage of the site are vacant. The site is bounded to the north by a railway viaduct, beyond which is Dantzic Street. To the north-east of the site is a microbrewery. To the east and south-east of the site is Gould Street and an electrical substation. Adjacent to the south and west of the site is St Michael's Flags & Angel Meadow Park.

2.2.2 Topographically speaking the site is relatively flat but levels fall towards the north, the River Irk is located circa 70m to the north, no significant vegetation is present on site.

2.2.3 Within the surrounding area land use is primarily a mixture of residential apartments, construction sites, public open space, railway land and car parking.

2.2.4 A suspected oil heater was noted in the western garage building however no evidence of any leaks was noted and the floor surfacing was hardstanding in good condition. The southern garage building was inaccessible at the time of the site visit. No potentially contaminative industrial activities, were noted on or adjacent the site at the time of inspection.

2.2.5 A selection of photographs showing the site at the time of inspection are provided within Appendix A.

2.3 Site History

2.3.1 The site history has been compiled by reference to historical Ordnance Survey maps obtained from Envirocheck presented in Appendix B.

On site Historical Land Uses

2.3.2 The site has historically been occupied by predominantly residential housing up until the mid 20th century when a cotton mill and works building / garage are noted as being present on site. A breakers yard was present on site from the late 20th century, it is not known exactly when the breakers yard ceased to exist, but it is believed to have been some point in the 2000's – 2010s.

2.3.3 The principal onsite historical features are summarised in the table below:

Table 2.1: On Site History Overview

Land Use	Location	From	To
Residential	Site wide (Largely cleared and reduced to several dwellings by 1949 and finally reduced to the remaining residential house at the time of writing in 1978)	1848	Present
St Michaels Mill (Cotton)	East of the site	1949	1958
Works Building / Garage	Northwest of the site (referred to as a garage from 1990)	1963	Present
Breakers Yard	Southwest and west of the site (unlabelled after 1984)	1984	2023
Additional unknown building	Southeast of the site (believed to be associated with present garage building)	1999	Present
Meadowside Show Apartment	Southwest of site in the area of the former breakers yard	2023	Removed 2023

Adjacent Historical Land Uses

2.3.4 The site is located within an historically industrial area of Manchester with previous nearby industrial land uses of note including the Rochdale Road Gas Works, railway line into Victoria Station, nearby rubbers works, bolts works and Collyhurst Foundry as well as a print works and tobacco factory.

2.3.5 The principal offsite historical features are summarised in the table below:

Table 2.2: Off Site History Overview

Land Use	Location	From	To
Gas Works	50m Southeast expanded throughout the early 20th century with additional gasometers, support buildings constructed to the east / southeast and additional gasometers constructed 200m to the north. Gradually cleared during the late 20th century with final clearance visible on plans dating 1984	1848	1984
Parochial Burial Ground	Adjacent western site boundary later known as St Michaels Flags Recreation Ground in the early 20th century.	1848	2023
Irk Town Mill	100m Northeast (Later known as Parker Street Mill) and absorbed into the larger rubber works in the area by the mid 20th century.	1850	1948-49
Starch Works and Print and Dye Works (1850) Rubber Works (1908)	150m Northeast converted to a rubber works in the early 20th century which was expanded through the early 20th century to encompass a larger area. Labelled as works during late 20th century	1850	2006
Railway	Adjacent sites northern boundary and gradually expanded through the 20th century.	1848	2023
Union Bridge Iron Works	50m North labelled as work during late 20th century	1891	1990
Victoria Paint Works and Bolt Works (1891) Bolt Works (1908) Collyhurst Foundry (1948)	150m Northeast, converted to a bolt works in early 20th century and a foundry in the mid 20th century. Absorbed into the nearby rubber works in the late 20th century.	1891	1970
Tobacco Factory	100m south labelled as works during late 20th century. Converted to residential during late 20th / early 21st century.	1908	2023

Land Use	Location	From	To
Print Works	150m south labelled as works during late 20th century. No longer labelled as works during the 21st century	1908	2023
Red Bank Electric Substation	Adjacent eastern boundary.	1970	2023

2.4 Geology

2.4.1 Review of BGS geological map records (Sheet 85) indicate the site is underlain by the following:

Drift Geology: Devensian Till – Diamicton

Solid Geology: Chester Formation – Sandstone

2.4.2 A search has also been completed using the BGS Borehole Scans facility to establish what (if any) historic site investigation or borehole data may be available for the development. There are several BGS boreholes located within close proximity to the site and encountered fill material to 3.35 to 3.53 mbgl before encountering weathered sandstone of the Chester formation.

2.4.3 There are 2 geological faults or features indicated within 500m of the site. The closest is located beneath or very close to the site and downthrows to the south.

Mining

2.4.4 The Envirocheck report presented in Appendix C indicates that, like most of Manchester City Centre, the site is located in a Coal Mining Reporting Area (former coal field). It is not located in a development high risk area or within the vicinity of any mine entries. The site is underlain by bedrock of the Pennine Middle Coal Measures at significant depth. However, from our experience and other recent nearby assessments, we do not consider there to be a meaningful possibility of the site being affected by historic coal mining and a Coal Authority report is not warranted at this time.

Radon

2.4.5 According to the environmental database search, the site is in an area where radon protection measures are required in less than 1% homes, which represents the lowest category of radon risk.

Ground Stability

2.4.6 Table 2.3 indicates the potential ground stability hazards on site, as obtained from the Envirocheck report.

Table 2.3: Ground Stability Hazards

Ground Stability Hazard	Risk Rating
Collapsible Ground	Very Low
Compressible Ground	Very Low
Ground Dissolution	No Hazard
Landslide	Very Low
Running Sand	Very Low
Shrinking or Swelling Clay	Very Low

Soil Chemistry

2.4.7 Table 2.4 indicates the background estimated soil chemistry for the site, as obtained from the site sensitivity maps within Appendix D.

Table 2.4: BGS Estimated Soil Chemistry

Determinant	Concentration
Arsenic	15 – 25 mg/kg
Cadmium	<1.8 mg/kg
Chromium	60 – 90 mg/kg
Lead	200 - 300 mg/kg
Nickel	30 - 45 mg/kg

2.5 Hydrological

Surface Water and Pollution

2.5.1 The nearest surface water feature is indicated 60m to the north in the form of the River Irk. Water quality of this receptor indicates a GQA Grade of “E” (poor) and a flow rate of less than 2.5 cumecs.

2.5.2 There are no active surface water abstractions at the site or within 500m of the site boundary.

2.5.3 The nearest discharge consent is indicated 67m to the northwest held by United Utilities for the release of public sewage storm overflow into the River Irk.

2.5.4 A number of historic pollution incidents have been noted in close proximity to the site. Four in total are located within 500m of the site (all category 3 – minor incidents). The closest of these incidents was located 125m to the north and relates to the discharge of oil into the River Irk.

2.5.5 The Envirocheck database indicates that there have been no prosecutions relating to controlled waters and one prosecution relating to industrial processes within 500m of the site. The prosecution relating to industrial processes was located 380m to the north of the site and relates to the deposition of 150 cubic metres of demolition waste without a waste management license.

Ground Water

2.5.6 The Envirocheck Groundwater Vulnerability Map indicates the superficial deposits are classified as secondary undifferentiated with the underlying Chester Formation bedrock designated as a Principal Aquifer.

2.5.7 The site is not located within an Environment Agency Source Protection Zone.

2.5.8 The site is not located in close proximity to any sensitive groundwater abstraction points (e.g., for a potable water supply well). The nearest water abstraction point is indicated 566m to the northwest relating to groundwater abstraction for general cooling.

Flooding

2.5.9 The site is classified as Flood Zone 1 (lowest risk category). Envirocheck records that the site has potential for groundwater flooding to occur, with properties below ground level most susceptible. These classifications do not constitute a Flood Risk Assessment.

2.6 Hazardous Substances

2.6.1 There are no records of active Control of Major Accident Hazards Sites (COMAH), Explosive Sites, Notification of Installations Handling Hazardous Substances (NIHHS), Planning Hazardous Substance Consents, Radioactive Substance or Planning Hazardous Substance Enforcements within 500m of site.

2.7 Landfill Sites and Other Waste Facilities

2.7.1 There are / are no active BGS recorded landfill sites, local authority recorded landfill sites, registered or historic landfill sites within a 250m radius of the site. The nearest recorded landfill site is a historical landfill site recorded 449m north of the site. This was the Queen's Road Tip, receiving Deposited Waste included Inert, Industrial, Commercial, Household, Special Waste, and Liquid Sludge, until closing in 1970.

2.7.2 There are 5 Licensed Waste Management Facilities, waste treatment sites or registered waste transfer stations within 250m of the site. The closest is located 147m northwest of the site. All of these have now expired or been transferred to other locations and non are anticipated to have affected the site or to have involved landfilling.

2.8 Industrial Land Use & Processes

2.8.1 The site is not on the Contaminated Land Register, and there are no such sites within 1km of the site.

2.8.2 Nearby Pollution Controls are detailed in the table below:

Regime	Onsite	0 to 250m	250m to 500m
Integrated Pollution Control (IPC)	None	None	None
Integrated Pollution Prevention and Control (IPPC)	None	None	None
Local Authority Integrated Pollution Prevention and Control (LAPPC)	None	None	None
Local Authority Pollution Prevention and Control (LAPPC)	None	6	2
Local Authority Pollution Prevention and Control Enforcement (LAPPCE)	None	None	None

2.8.3 Local Authority Pollution Prevention and Controls within 250m relate primarily to local historic industry, such as the tobacco factory and a concrete mixing facility. All of these permissions have now been revoked.

2.8.4 There are 2 inactive entries for the site in the Contemporary Trade Directory. These relate to Irwell Garage, listed as working on gearboxes, and MJT Motors, listed as providing garage services. Given the city centre location, there are numerous nearby entries, mostly for light industry and commercial practices. The nearby entries include garages, a gas supplier and a manufacturer of floor coverings. The nearest active entry is for Blackjack Beers Ltd., 99m southeast of the site.

2.8.5 The nearest fuel station entry is indicated 263m to the southeast, relating to an obsolete service station on Rochdale Road.

2.9 Environmentally Sensitive Areas

2.9.1 The Envirocheck database indicates that there are no Special Protection Areas (SPAs), Sites of Special Scientific Interest (SSSI) or areas of adopted green belt on or in close proximity to the site. However, the site is located within a Nitrate Vulnerable Zone.

2.10 Ecological Setting & Invasive Plant Species

2.10.1 There are no sites of Special Biological Interest (SBI), Special Areas of Conservation (SAC) or nature reserves at the site or within 250m of the site boundary.

2.10.2 No evidence of invasive plant species was noted during the course of the site walkover survey, although, it should be noted the inspection did not comprise a detailed ecological assessment.

2.11 Unexploded Ordnance Risks

2.11.1 Bombing maps held by Manchester University do not record the impact of any bombs onsite. The site is in a city centre location in the proximity of other historic impacts and likely bombing targets such as railway infrastructure. We have been provided with an Unexploded Ordnance Desk Study for

the adjacent site at Angel Meadow, which considered risks at that site to be low. We recommend a similar assessment is undertaken of the site.

2.12 Former Site Investigation Information

2.12.1 We have been provided with records of the Phase 1 Preliminary Environmental Risk Assessment completed for an adjacent development at Angel Meadow, in May 2017. This does not include any site investigation or testing data. We consider this desk study elements to generally support the assessment made in this report.

2.13 Redevelopment Proposals

2.13.1 Full planning permission is sought for the temporary change of use of the site and existing buildings to an arts and cultural venue/event space (Sui Generis), with associated food and drink space (Flexible Use Class E / Sui Generis). The proposals should be entirely covered in hardstanding as the site currently exists and will involve no breaking of ground or significant construction.

3.0 Preliminary Conceptual Site Model

3.0.1 The results from the desk-based information review have been used to assess theoretical risks posed by ground contamination and ground stability issues beneath the site. The assessment considers these risks both in terms of the current arrangement and usage of the site, as well as any potential future development (and associated construction process).

3.0.2 The assessment has been collated with reference to various statutory and non-statutory guidance documents relating to land contamination and ground stability. Specifically, the assessment has been conducted in accordance with the Environment Agency Land Contamination Risk Management (LCRM) guidance relating to the "Tier 1 Preliminary Risk assessment" process (revised April 2021).

3.0.3 In accordance with this method, a Preliminary Conceptual Model has been collated for the site based on the results of the desktop review. This model is based around the Source / Pathway / Receptor methodology as outlined in Fig 3.0.

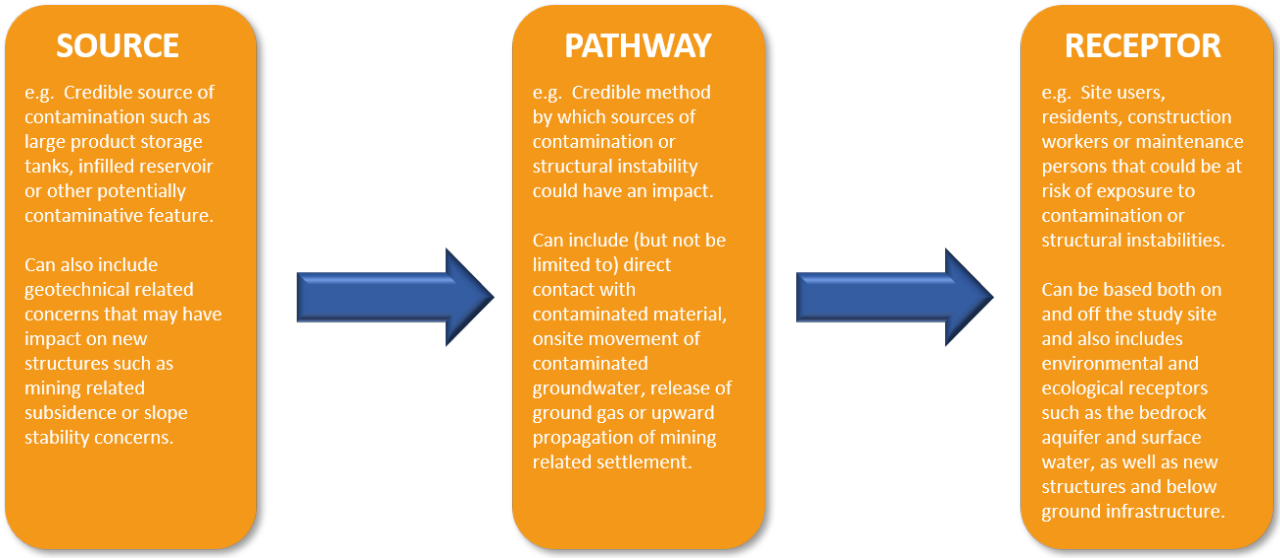

Figure 3.0 Source Pathway Receptor Diagram

3.0.4 Risk assessment is the process of collating known information on a hazard or set hazards in order to establish actual or potential risks to receptors. The receptor may be human health, controlled waters, a sensitive local ecosystem or even construction materials. Receptors can be connected with the hazard under consideration via one or several exposure pathways (e.g., the pathway of direct skin contact and oral exposure).

3.0.5 Risks are generally managed by isolating or removing the hazard, isolating the receptor, or by intercepting the exposure pathway. Without the three essential components of a source (hazard), pathway and receptor, there is deemed to be no risk. In other words, the mere presence of a hazard at a site does not mean that there will necessarily be risks.

3.0.6 Potential sources of contamination have been identified across the site, where applicable, based on observations and information obtained during the desktop review. These sources are defined based on either observation during historical map records or site recognisance (e.g., evidence of above ground fuel storage tanks or previous industrial operation); or by review of published environmental information on operations within or adjacent the site (e.g., historical landfill records, trade industry directory etc).

3.0.7 Where applicable, reference has been made to historical Department for the Environment Industry profiles and other information on industrial operations to better define the range of substances that may be present within soils beneath the site.

3.0.8 The risk assessment has been completed with reference to the guidance outlined within CIRIA 552 "Contaminated land risk assessment. A good practice guide". This risk assessment methodology considers the potential consequence and severity of risks that may be present within soils, and then compares these with the likelihood of occurrence and exposure of said risk. A range of risk classifications are provided within CIRIA 552 further details of which are provided in Table 3.0 below.

Table 3.0: Definition of risk class and consequence

Risk Class	Definition	Example
Minor	Potential for harm, although not significant, which may result in financial loss to resolve. Ground conditions where the use of PPE would readily mitigate risks posed to human health.	Low level contamination hotspots within made ground / demolition fill materials. Stunted or impeded plant growth due to poor soil quality.
Mild	Pollution of non-sensitive water resources or damage to crops, plant growth, below ground utilities or structures.	Perched groundwater contamination overlying low permeability aquifer or aggressive sulphate concentrations in soils.
Medium	Sources of contamination identified on site have the potential to cause both long and short-term health effects on site residents / users. Alternatively (or in conjunction with) sources of contamination may have the potential to impact surface or groundwater quality or impede vegetation growth.	Elevated concentrations of hydrocarbon contamination reported within topsoil tested within residential gardens as a result of inadequate or incomplete previous remediation works. Movement of contaminated groundwater from leaking below ground storage tank into adjacent surface water course.
Severe	Sources of contamination pose a credible and acute risk to human health with potential for "Significant Harm" occurring as defined by the Part IIA of the Environmental Protection Act (1990). Alternatively (or in conjunction with risks posed to human health) sources of contamination may pose an immediate risk to controlled water resources or ecosystems.	Grossly contaminated soils are encountered or disturbed during excavation works, causing an immediate release of toxic soil vapour and leachate / contaminated groundwater flow across adjacent land.

3.0.9 As previously discussed the contaminated land risk assessment model evaluates both, the severity of risks that may be present within soils / groundwaters in the context of threats posed to identify receptors before deriving the actual risk rating based on the probability of occurrence. Table 3.1 (provided overleaf) outlines the range likelihood of risk.

Table 3.1: Probability Assessment

Classification	Definition
High likelihood	A credible pollutant linkage has been identified and it is very likely contaminants will impact identified receptors in both the short or long term (or is already actively doing so). The potential for harm to be caused is thus highly likely.
Likely	Pollutant linkages between the sources of contamination and identified receptors are present and it is considered likely they will become active given the right set of circumstances (e.g. contaminants currently buried below ground that are likely to be exposed or disturbed during construction / excavation works. The circumstances are such that an event is not inevitable, however it is possible in the short term and likely over the longer term.
Low likelihood	A theoretical pollutant linkage has been identified that has the potential to expose receptors to contaminants under the correct circumstances. However, the likelihood of such an event occurring is not a certainty, even in the long term
Unlikely	There is no / minimal likelihood a pollutant linkage would occur, even over the long term.

3.0.10 The risk assessment process is a combination of probability and consequence, recognising that it may be possible to have a significant source of contamination beneath a site (such as a large below ground chemical storage tank) that may only present a relatively moderate to low risk (owing to the fact it may be contained within a secure concrete bund). Table 3.2 indicates how the actual nature of risk is established with Table 3.3 illustrating how the risk is interpreted in the context of contaminated land risk assessment.

Table 3.2: Risk Definition

		Consequence			
		Severe	**Medium**	**Mild**	**Minor**
Probability	High Likelihood	Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk
	Likely	High Risk	Moderate Risk	Moderate / Low Risk	Low Risk
	Low Likelihood	Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate / Low Risk	Low Risk	Very Low Risk	

Table 3.3: Description of Risks Posed

Risk Definition	Description
Very High	Active pollutant linkages between a significant source of contamination and identified receptors have been establish and there is a high likelihood of severe harm occurring to said receptors unless immediate investigation and remediation action is not taken.
High Risk	Harm is likely to arise to receptors from an identified hazard in the short and long term. Urgent investigation of the contaminant issue will be required, and remedial treatment is likely.
Moderate Risk	The possibility of harm has been identified toward receptors under the right circumstances, although the severity of harm would be relatively mild. Further investigation of identified issues would be prudent and possible need for remedial measures in the long term.
Low Risk	It is possible harm could arise to a designated receptor from identified hazard, but it is likely (if realised) any harm would be (at worst) mild.
Very Low Risk	No significant pollutant linkages have been identified and the possibly of harm occurring to receptors is low.

Potential Sources

3.0.11 Based on the current / historical uses of the site, and the surrounding area, the following potential sources of contamination / abnormal items have been identified:

- On site Made Ground associated with redevelopment, and historic industries including garages and breakers yard. Contamination likely limited to metals, inorganics, asbestos, PAHs and TPH.

- Off-site sources including garages and railway land. It is feasible that deposition could have occurred during the redevelopment of nearby sites. Contamination likely limited to metals, inorganics, asbestos, PAHs and TPH.

Potential Pathways and Receptors

3.0.12 The following potential pathways and receptors have been identified for the above potential sources of contamination:

- End users of the site (future site users) could be at risk of exposure to contaminated soils / materials at the site via ingestion, direct contact and inhalation of contaminated dust / vapours / hazardous gas. The site is and will remain, covered in buildings and hardstanding which will significantly inhibit all of the above pathways. The temporary use scenario is not likely to involve extended stays onsite and will further lower risk.

- Construction persons are not considered relevant as we do not consider the proposals to involve significant construction. Consequently, this risk receptor is not considered further.
- Leaching of potential contaminants into the bedrock aquifer beneath the site or nearby water course.

3.0.13 Table 3.4 (provided overleaf) assess and summarise the pollutant linkages that may exist at the site

Table 3.4		Preliminary Conceptual Site Model					
Source		Pathway	Receptor	Severity	Probability	Risk definition	Comments
On Site	Made Ground, historic garages and breakers yard (metals, inorganics, asbestos, PAHs and TPH)	Dermal contact and / or ingestion; inhalation of vapours / dusts	Current Site Users	Medium	Unlikely	Low	Contaminative sources are limited to Made Ground associated with historic redevelopment of the site, and the historic garages and breakers yard. Pathways to human health receptors will be significantly inhibited by the covering of the site with buildings and hardstanding, and the short duration of stays.
			Future Site Users: temporary use	Medium	Unlikely	Low	Contaminative sources are limited to Made Ground associated with historic redevelopment of the site, and the historic garages and breakers yard. Pathways to human health receptors will be significantly inhibited by the covering of the site with buildings and hardstanding, and the short duration of stays.
On Site	Offsite sources	Dermal contact and / or ingestion; inhalation of vapours / dusts	Current Site Users	Medium	Unlikely	Low	Contaminative sources are limited to adjacent local garages and railway land. Pathways to human health receptors will be significantly inhibited by the covering of the site with buildings and hardstanding, and the short duration of stays.
			Future Site Users: temporary use	Medium	Unlikely	Low	Contaminative sources are limited to adjacent local garages and railway land. Pathways to human health receptors will be significantly inhibited by the covering of the site with buildings and hardstanding, and the short duration of stays.

	Ground Conditions, including historical activities	Leaching of contaminated soil & impact beneath site	Controlled Waters: Aquifer	Medium	Low likelihood	Moderate to low	Contaminative sources are limited to Made Ground associated with historic redevelopment of the site, and the historic garages and breakers yard. The site is underlain by a Principal Aquifer. However, this is anticipated to be overlain by a layer of relatively low permeability Devensian Till, the thickness of which has not been established. Sources of contamination onsite are not considered to be extensive, and infiltration of the site will be significantly limited by the covering of the site with buildings and hardstanding.
			Controlled Waters: Surface Water	Medium	Low likelihood	Moderate to low	Contaminative sources are limited to Made Ground associated with historic redevelopment of the site, and the historic garages and breakers yard. The River Irk is located circa 70m to the north. Sources of contamination onsite are not considered to be extensive, and infiltration of the site will be significantly limited by the covering of the site with buildings and hardstanding.
On Site	Ground Gas Generation	Migration / Accumulation	Current Site Users	Medium	Unlikely	Low	Potential sources are limited to Made Ground onsite, which is considered to have low generation potential. The occasional use of the site and frequent ventilation is such that risks are considered to be low.
			Future Site Users	Medium	Unlikely	Low	Potential sources are limited to Made Ground onsite, which is considered to have low generation potential. The occasional use of the site and frequent ventilation is such that risks are considered to be low.

Add note re: Severe (gas) rating due to risk to human health (asphyxiation), proposed development (explosion).

** It is considered the risks posed to construction personnel, by sources of contamination, can be adequately mitigated against via the use of full PPE and the adoption of good hygiene and site practices. As required, any suspected sources of contamination discovered during the site's development should be brought to the immediate attention of RoC Consulting to enable the implications to be established and appropriate remedial recommendations made. In the event of such a discovery the scope and findings of the current assessment will require re-assessment and revision.*

4.0 Conclusions & Recommendations

4.0.1 With respect to contaminated land issues, the report has identified:

- The site is relatively typically of an inner-city brownfield site, with historic land uses including residential, garages and a breakers yard
- These sources are potential sources of contamination in the form of Metals, Inorganics, Asbestos and TPH
- Pathways to the current and proposed land uses are likely to be significantly inhibited by the covering of the site with buildings and hardstanding, and the short duration of stays. We understand the proposed development will not involve any breaking of ground.
- There are limited pathways to controlled waters and the underlying aquifer. The proposed development is not considered to have an adverse impact on these and addressing any existing risks is considered to be beyond the scope of what is achievable in the proposed development
- Potential sources of ground gas are limited to Made Ground onsite, which is considered to have low generation potential. The occasional use of the site and frequent ventilation is such that risks are considered to be low.

4.0.2 Significant construction is not anticipated and therefore geotechnical aspects are considered beyond the scope of this assessment.

4.0.3 There is a non-negligible UXO risk onsite evident from historic maps and bomb maps. In the event of any future construction a Detailed Risk Assessment in accordance with CIRIA C681 will also be required.

4.0.4 As such it is not considered that any site investigation or remedial works are required in advance of the proposed temporary use.

Lancashire And Furness

Published 1848

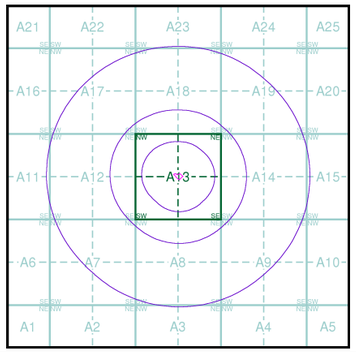

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Ordnance Survey Plan

Published 1972 - 1979

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Manchester

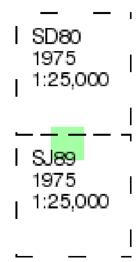

Published 1975

Source map scale - 1:25,000

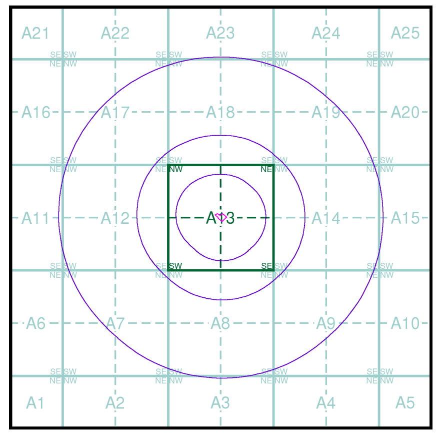

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

VectorMap Local

Published 2023

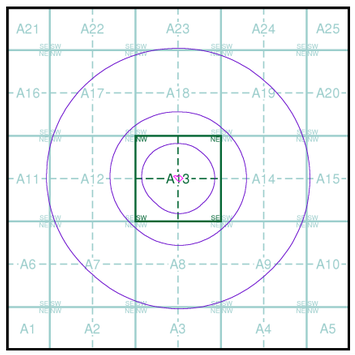

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

RoC CONSULTING

Lancashire And Furness

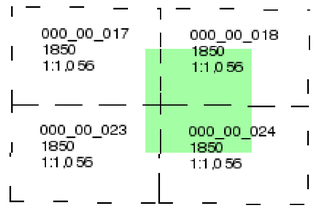

Published 1850

Source map scale - 1:1,056

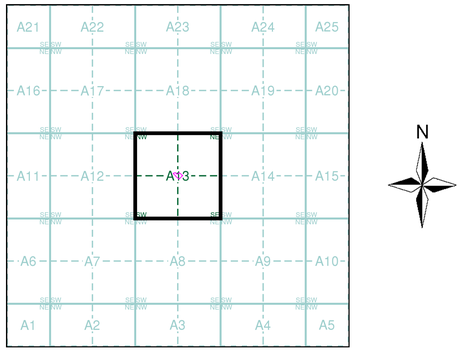

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

RoC CONSULTING

Lancashire And Furness

Published 1891

Source map scale - 1:500

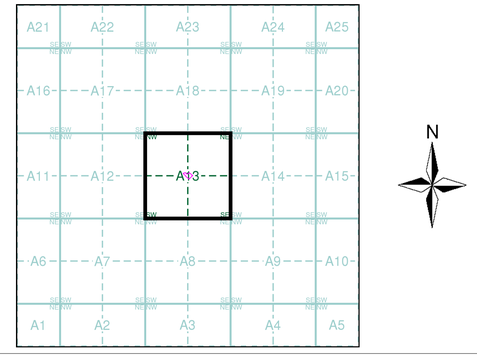

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Ordnance Survey Plan

Published 1951

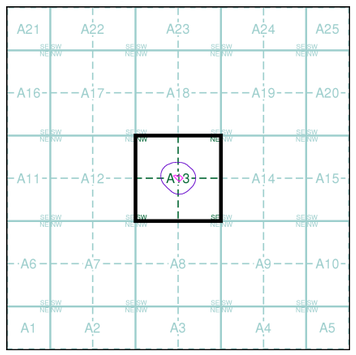

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1992

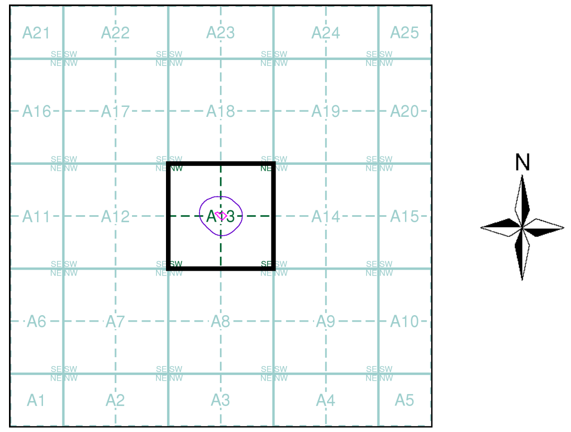

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Estimated Soil Chemistry Chromium - Slice A

Order Details

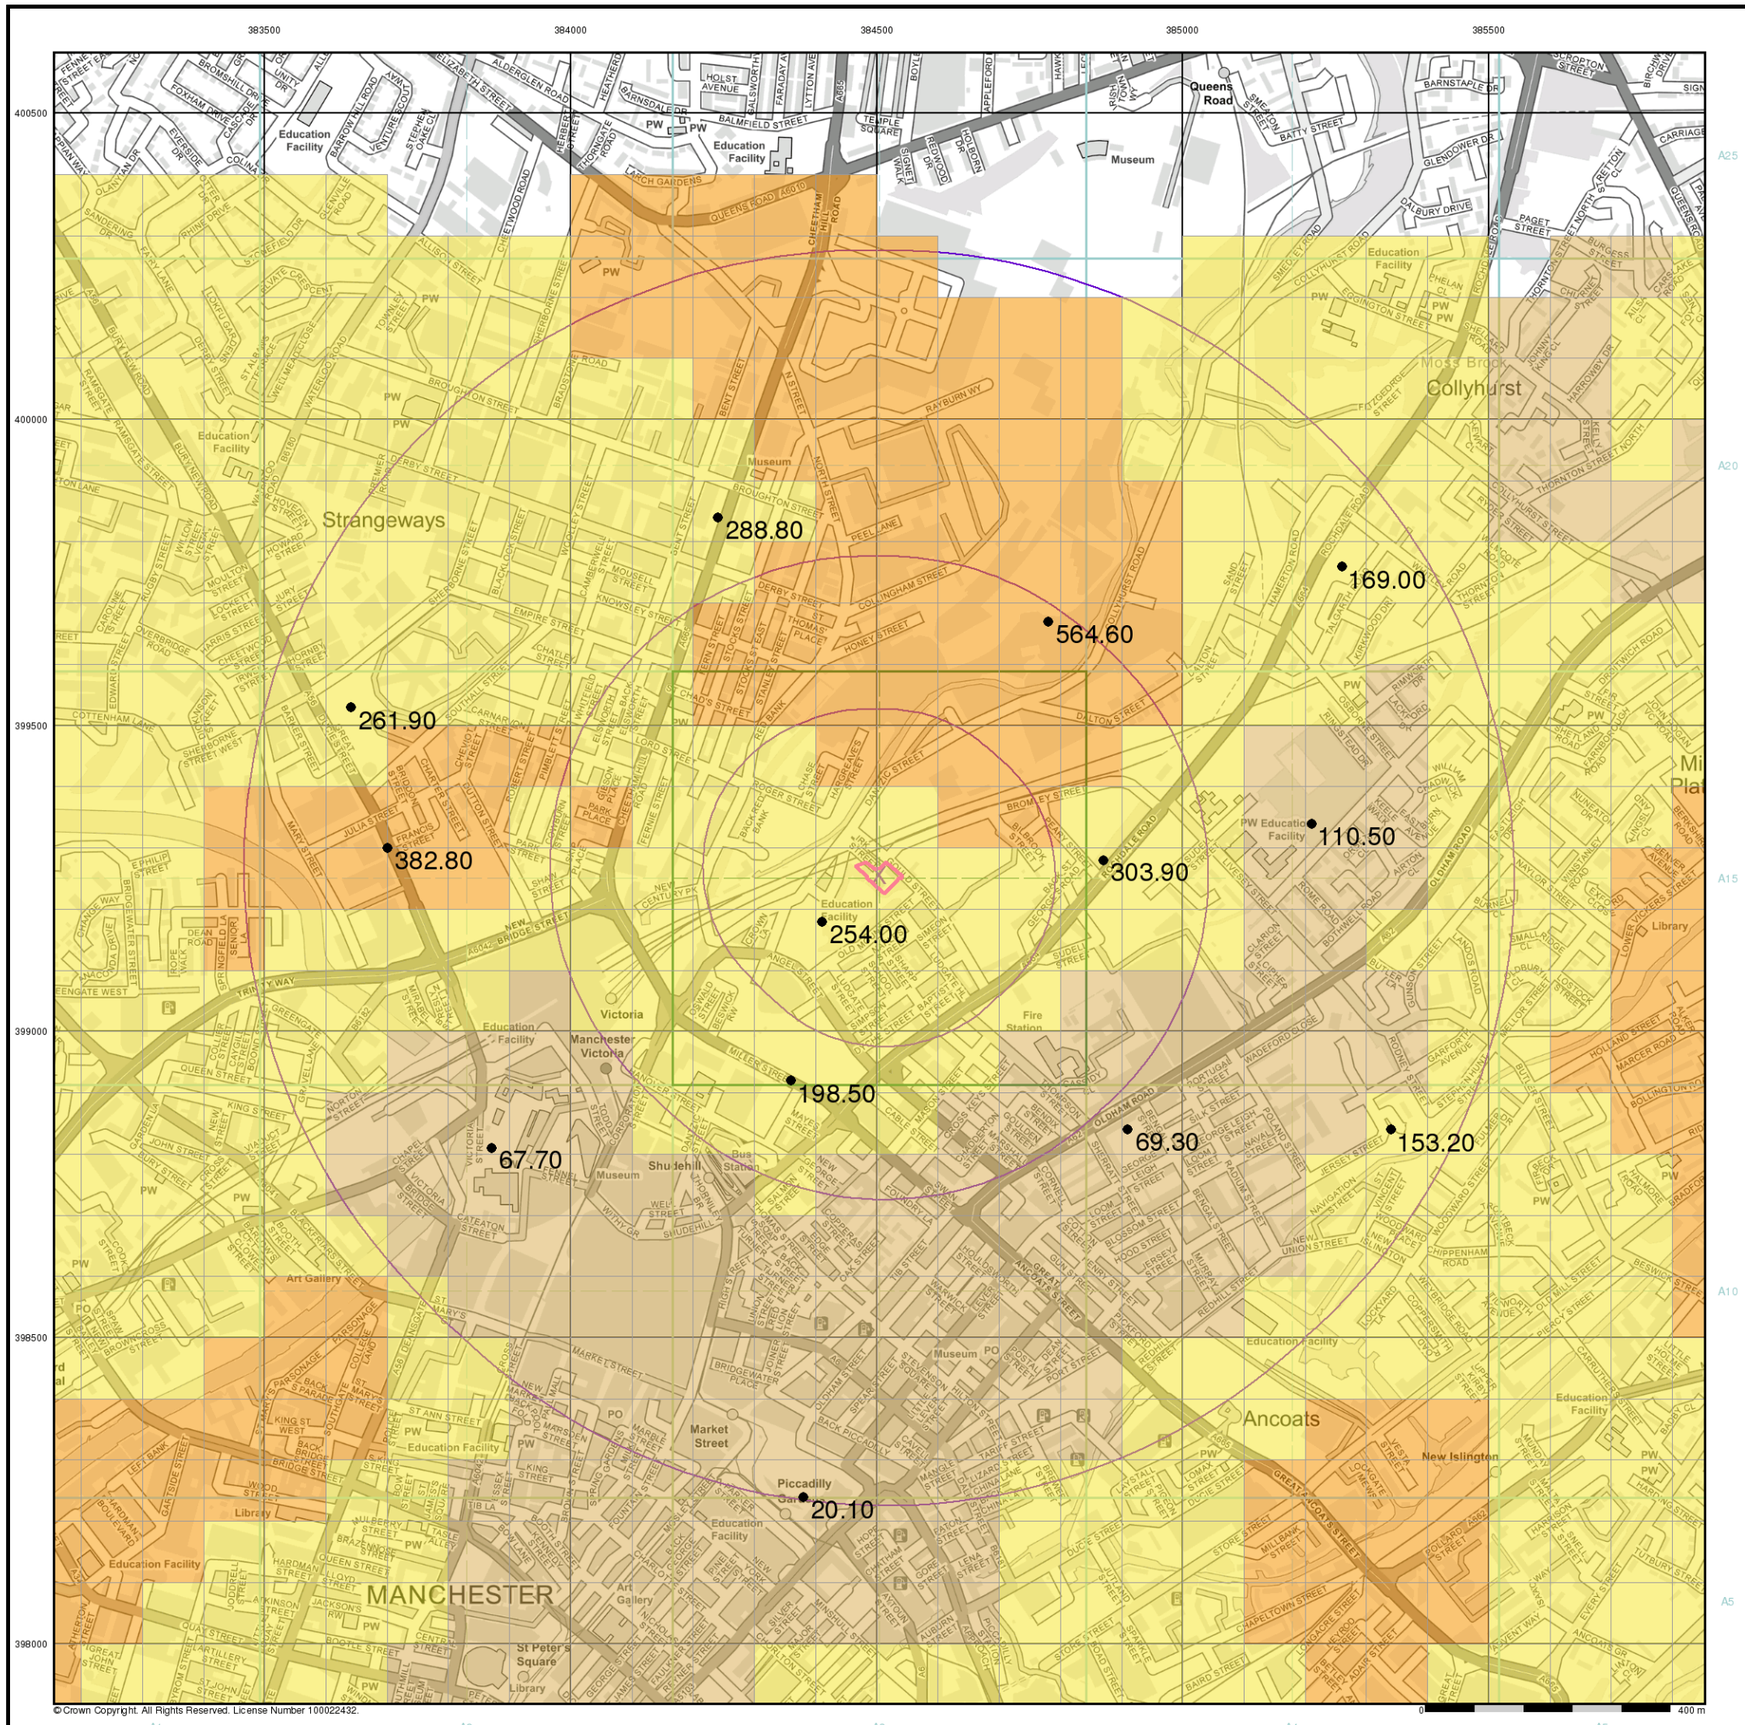

Order Details:	312040042_1_1
Customer Ref:	4648
National Grid Reference:	384500, 399260
Slice:	A
Site Area (Ha):	0.19
Search buffer (m):	1000

Site Details

79, Gould Street, MANCHESTER, M4 4DL
