STIEBEL ELTRON

Supplier statement regarding the noise emissions created by 4 WPL 25 AS units.

The combined noise form 4 units at a distance of 5m from the building would be expected to be 45 dB(A).

For comparison a typical fridge emits 40-43 dB(A).

Other observations

The building is located on the busy A6 and the noise generated by the traffic is considerably more.

The Air Source Heat Pumps would not be running overnight.

The nearest house is approximately 14m from the proposed location of the Heat Pumps
