

EnviroSmart

Phase 1 Contaminated Land Assessment

Site address

50 Amos Avenue
Manchester
M40 2RS

Date issued

January 2022

Report status

Final

Grid Reference

388360, 399750

Site Area

0.05 ha

Report reference

76102R1

Risk – Low to Moderate

Given the potential for Made Ground to be present on the Site and also the presence of former landfills within close proximity, there is the potential for contamination to be present at the Site. It is therefore recommended that a proportionate programme of site investigation and monitoring works be undertaken in order to establish the presence or absence of contamination and to enable a quantitative assessment of the associated environmental risks.

Given that the Site lies in an area where 1 to 3% of homes are at or above the UK radon action level (200 Bq/m3), we recommend that either further Radon Assessment is undertaken or that appropriate Radon Mitigation Measures are included in any future built structures.

Executive Summary

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contaminated land hazards which may be present at the study site. GeoSmart are providing consultancy and professional opinion based upon our collation, interpretation and assessment of information contained within an Envirocheck report, and other sources where expressly stated (i.e. site visits, photographs, and anecdotal evidence). It is acknowledged that the risk assessment findings are based on documentary sources of information alone.

Site analysis

		On-Site	Off-Site
1. Probability/likelihood of a contaminant hazard at the Site	High likelihood		
	Likely		
	Low likelihood		
	Unlikely		
2. Potential severity/consequence of any impacts	Severe		
	Medium		
	Mild		
	Minor		
3. Overall land quality risks posed by the Site	Very high		
	High		
	Moderate		
	Moderate/low		
	Low		
	Very low		

Summary of existing and proposed development

The Site is currently vacant land. Development proposals comprise the residential redevelopment of the Site with the construction of two detached houses.

Environmental Setting

The underlying superficial geology consists of Till, Devensian which is classified as a Secondary (undifferentiated) Aquifer. The bedrock geology consists of the Collyhurst Sandstone Formation which is classified as a Principal Aquifer.

The nearest water feature is a pond, located c. 220 m south east of the Site boundary. The nearest significant water feature (River Medlock) is located c. 240 m south.

The nearest sensitive land use is Clayton Vale (Local Nature Reserve) located c. 165 m south of the Site.

Site History

The Site was first developed by 1931, when a building was constructed in the east of the Site. By the 1960s, two additional small structures were built in the eastern corner of the Site and remained present until c. 1986. The Council's planning portal shows that an application was approved in 1990 for change of use from a launderette to a furniture shop. Aerial imagery shows the on-Site building was demolished in c. 2000. Off-Site land uses are primarily residential/commercial but have also included a Rubber Works, Motor Works, Furniture Works, several potentially infilled ponds, pits and reservoirs and refuse heaps. A historical landfill is recorded to be present c. 30 m to the south east of the Site.

Radon

The Site lies in an area where 1 to 3% of homes are at or above the UK radon action level (200 Bq/m3).

Coal Mining

Although the Site lies within an area of historic coal mining, as the Site is not located within a Coal Authority Development High Risk Area there is no specific requirement to submit any coal mining information with a planning application and the Coal Authority will not be consulted by the local planning authority (LPA). The LPA are likely to include the Coal Authority Standing Advice as an informative note with the decision notice.

Summary of Conceptual Site Model (CSM)

On-Site

Source of Contamination

Potential for inorganic and low volatility organic contaminants plus asbestos containing material to be present within the subsurface soils associated with potential Made Ground associated with historical construction and demolition activities. There is also the potential for radon gas within the subsurface.

Receptors

Human Health.

Human Health (pathway)

Dermal contact, ingestion & inhalation of soils & soil dust, consumption of home grown produce, ingress into water supply pipework and subsequent water ingestion, liberation of sub surface ACMs and inhalation of asbestos fibres; potential to cause long term health effects.

Off-Site

Source of Contamination

Potential for elevated methane and carbon dioxide to be present within the sub-surface soils associated with the nearby landfills.

Receptors

Human Health.

Human Health (pathway)

Lateral and vertical migration of ground gases into on-Site buildings; potential to cause asphyxiation or an explosion.

Preliminary Risk Assessment

Overall, the preliminary risk classification of the Site in relation to the proposed redevelopment is considered to be Low to Moderate.

Recommendations / Next Steps

Phase 2 intrusive investigation

Given the potential for Made Ground to be present on the Site and also the presence of former landfills within close proximity, there is the potential for contamination to be present at the Site. It is therefore recommended that a proportionate programme of site investigation and monitoring works be undertaken in order to establish the presence or absence of contamination and to enable a quantitative assessment of the associated environmental risks.

Radon assessment / mitigation measures

Given that the Site lies in an area where 1 to 3% of homes are at or above the UK radon action level (200 Bq/m³), we recommend that either further Radon Assessment is undertaken or that appropriate Radon Mitigation Measures are included in any future built structures.

Further information can be found at <http://www.ukradon.org/information/> Additionally local building control may have further knowledge in relation to radon risks within the area.

Consider Coal Mining Risk

As the Site is not located within a Coal Authority Development High Risk Area there is no specific requirement to submit any coal mining information with a planning application and the Coal Authority will not be consulted by the local planning authority (LPA). The LPA are likely to include the Coal Authority Standing Advice as an informative note with the decision notice. Consideration should however be given to further investigation of the coal mining risk.

1. Introduction

1.1 Background

The study site (from herein known as 'the Site') is situated at 50 Amos Avenue in Manchester, M40 2RS. A location plan of the Site is shown in Section 1.5. A proposed development plan of the Site is shown in Section 1.6.

GeoSmart was commissioned by Paradise Property Ltd in January 2022 to undertake a Phase 1 Land Quality Assessment for the Site. The report has been requested in order to support a proposed planning application for the Site.

The proposed development is for residential redevelopment of the Site including the construction of two detached houses.

The EnviroSmart report has been undertaken by firstly compiling information concerning the Site and the surrounding area, including current and historical land uses, geological records and registered pollution incidents. The information which is gathered is then used to construct a 'conceptual site model', including an understanding of likely contaminant sources, pathways and receptors. Finally, a preliminary assessment of risks posed to identified receptors (i.e., people, buildings or the natural environment) from the anticipated land quality at the Site is performed. The risk assessment methodology is consistent with CIRIA C552 (2001); see Section 3.4 for details.

1.2 Purpose of this report

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contamination hazards which may be present at the Site.

1.3 Report contents

This report is divided into two sections, as described below:

Section	Content	Purpose
Section 2: LAND QUALITY ASSESSMENT	A summary of the site history and environmental setting, the findings of the preliminary risk assessment and associated recommendations	To present a clear and concise overview of the land quality issues facing the Site, including recommendations of how to manage any land contamination which may be present
Section 3: SUPPORTING INFORMATION	A collection of site specific information on which the land quality assessment is based	To provide detailed information in support of the risk assessment; this section also represents a source of reference data for use in any subsequent site works/assessments

1.4 Report limitations

It is noted that the findings presented in this report are largely based on information supplied by third parties. Whilst we assume that all information is representative of past and present conditions we can offer no guarantee as to its validity.

This report excludes consideration of potential hazards arising from any activities at the Site other than normal use and occupancy for the intended land uses. Hazards associated with any other activities have not been assessed and must be subject to a specific risk assessment by the parties responsible for those activities.

1.5 Site location plan

BlueSky copyright and database rights 2022

1.6 Proposed Site development plan

2. Land quality assessment

2.1 Site details

Site name:	50 Amos Avenue	Current land cover:	Former building footprint (20%) and softstanding (80%)
Current use:	Vacant land		
Proposed use:	Residential with garden	Site area:	0.05 ha

2.2 Conceptual understanding (potential sources of contamination)

 Site history <i>(historical land use taken within 250m radius of the Site boundary)</i>	Date	Description of land use		POTENTIAL SOURCES OF CONTAMINATION	Source description	LIKELY PROBABILITY OF CONTAMINATION
		On-Site	Off-Site			
	1848	The Site is undeveloped.	There is a suspected pond c. 15 m south east, a railway line c. 150 m south and two reservoirs c. 210 and c. 215 m east of the Site.		The land use history suggests that there is the potential for contamination to have occurred <u>on-Site</u> relating to the following: Commercial (Laundrette & furniture shop) - Storage of fuels and/or miscellaneous chemicals. - Miscellaneous small scale fuel and chemical spills. - Made Ground associated with former development/demolition activities. - Asbestos containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface surrounding the buildings.	
	1893	No apparent change	There is an excavation c. 35 m south west of the Site. There are two further ponds c. 55 m and c. 105 m west of the Site. The reservoirs to the east are associated with Victoria Rubber Works.			
	1894		No apparent change			
	1909 - 1910	No apparent change	There has been residential development c. 20 m north of the Site.		<i>continued overleaf</i>	
	1923	No apparent change	The reservoir c. 210 m east of the Site is no longer present and the Rubber Works has expanded further to the east.			
1931	There is an old clay pit c. 230 m north west.					

2.2 Conceptual understanding (potential sources of contamination)

 Site history <i>(historical land use taken within 250m radius of the Site boundary)</i>	Date	Description of land use		POTENTIAL SOURCES OF CONTAMINATION	Source description	LIKELY	PROBABILITY OF CONTAMINATION
		On-Site	Off-Site				
	1931 - 1932	The Site has been developed with a building in the east.	The pond to the south east and ponds to the north west are no longer present. The area to the north west has been extensively developed with residential housing, including the old clay pit to the north west. There is a motor works c. 115 m east. There appears to have been infilling occurring to the south of the railway line c. 160 m from the Site.		The land use history suggests that there is the potential for contamination to have occurred <u>off-Site</u> relating to the following: Refuse Heaps/Tip/Landfills Waste materials may be present in close proximity to the Site. The waste may contain a variety of inorganic and organic contaminants and could give rise to the generation of bulk gases and landfill leachate.		
	1938	No apparent change					
	1951	No apparent change; the on-Site budling is labelled as Nr 50.	Two buildings have been constructed adjacent to the north east of the Site (Nrs 52 and 54). The reservoir c. 215 m east of the Site is no longer present. The motor works is now labelled as a furniture works. The land to the south of the railway and an area c. 130 m south west of the Site are labelled as refuse heaps.		Potentially infilled ponds, reservoirs and Old Clay Pit Made Ground associated with former infilling activities. Any Made Ground/fill materials may contain a variety of inorganic and organic contaminants and could give rise to the generation of bulk gases and also leachate.		
	1952 - 1956	No apparent change			Despite the known presence of ponds, pits and reservoirs which may have been subsequently infilled, given the small scale of the nearby features and the time that has passed since any potential infilling occurred (>60 years), it is considered unlikely that there will be an appreciable gas source which could impact future Site users. Therefore these potential sources will not be carried forward into the risk assessment.		
	1960	Two modest additional structures are evident in the south-east of the Site.	The refuse heap c. 130 m south west is no longer labelled and the excavation to the south west is no longer present. There has been further residential development to the south and west of the Site.				
	1967 - 1968	No apparent change			Industrial (Rubber Works, Motor Works, Furniture Works) - Potential for bulk storage of fuels and/or miscellaneous chemicals. Note: given the land use history of the Site there is potential for underground storage tanks or pipelines containing chemical and fuel residues to be present. - Miscellaneous fuel and chemical spills (i.e., fuels used for heating & powering machinery/vehicles, oils and lubricants, paints/thinners, degreasers, etc.). - Potential for localised deposition of industrial wastes and by-products.		
	1979	No apparent change	The area of the former refuse heap to the south west is labelled as a playground and playing field.				
	1981		The refuse heap to the south of the railway line is labelled as a disused tip.				
	1984		The rubber works has been redeveloped with residential housing.				

2.2 Conceptual understanding (potential sources of contamination)

 Site history <i>(historical land use taken within 250m radius of the Site boundary)</i>	Date	Description of land use		POTENTIAL SOURCES OF CONTAMINATION	Source description	LIKELY	PROBABILITY OF CONTAMINATION
		On-Site	Off-Site				
	1986	The two structures in the eastern corner are no longer present.	No apparent change		As above		
	1987 - 1999	No apparent change					
	2000	Aerial imagery shows the on-Site building was demolished with only the building footprint remaining. The rest of the Site is vegetated.	Aerial imagery shows no apparent change				
	2003 - 2004	Aerial imagery shows no apparent change					
	2005	Aerial imagery shows no apparent change	Aerial imagery shows the works c. 115 m to the east has been demolished.				
	2009		Aerial imagery shows the area where the former works was located has been redeveloped.				
	2013 - 2021	Aerial imagery shows no apparent change					
	Other Information	There is one planning application relating to the Site from 1990 (036182) for the change of use from a launderette to a furniture shop. This application was approved.					

2.2 Conceptual understanding (potential sources of contamination)

 Current land use	The Site is currently vacant land There are no known buried storage tanks at the Site. There is no known bulk fuel or chemical storage on Site.			POTENTIAL SOURCES OF CONTAMINATION	The Site's current use is unlikely to have given rise to significant land contamination.	UNLIKELY
 Neighbouring industrial land uses (see environmental data report in Section 3.3 for full listing)	There are one or more potentially contaminative land uses are located within 250 m of the Site:				Despite the presence of potential contaminative activities in the area surrounding the Site, since none occur within close proximity (i.e., within a 50 m radius of the Site) they are unlikely to pose a significant contamination hazard in relation to the Site itself. Contemporary trade directory entries include: New Century Blinds (inactive) blinds, awnings & canopies c. 175 m south east Drain Services N W Ltd (inactive) commercial cleaning services c. 210 m south east	UNLIKELY
	Distance from Site	Number of active industrial land uses	Number of inactive industrial land uses			
	1 - 50 m	0	0			
	51 - 100m	0	0			
	101 - 250 m	0	2			
	Nr	Nearest distance	Land use / permitted activity / authorisation			
	0	NA	Fuel station entries			
	0	NA	Gas pipelines			
	0	NA	Underground electrical cables			
	0	NA	Control of major accident hazards sites (COMAH)			
	0	NA	Notification of installations handling hazardous substances (NIHHS)			
	0	NA	Explosives sites			
	0	NA	Planning hazardous substance consents			
0	NA	Planning hazardous substance enforcements				
0	NA	Sites determined as Contaminated Land under Part IIA of the Environmental Protection Act 1990				
0	NA	Records of Licensed Discharge Consents.				
0	NA	Local Authority pollution prevention and control sites				
0	NA	Local Authority pollution prevention and control enforcements				
0	NA	Records of Category 3 or 4 Radioactive Substance Licences				

2.2 Conceptual understanding (potential sources of contamination)

 EA recorded pollution incidents (see environmental data report in Section 3.3 for full listing)	No Environment Agency pollution incidents have been recorded within 250 m of the Site.		No potential for gross contamination has been identified in relation to any pollution incidents occurring near to the Site.	NEGLECTIBLE	
 Landfills / waste sites (taken within 500m radius of the Site boundary, see environmental data report in Section 3.3 for full listing)	There are one or more BGS recorded landfills located within 500 m of the Site. These include: Clayton Vale Landfill is located c. 160 m south of the Site. No further information has been supplied. There are one or more Environment Agency listed historical landfills located within 500 m of the Site. These include: Clayton Vale Power Station landfill is located c. 30 m south west of the Site. The landfill received inert and industrial waste between 1901 and 1980. Clayton Vale landfill is located c. 160 m south of the Site. The landfill received inert and industrial waste from 1901. The last input date is unknown. Clayton Vale Power Station landfill is located c. 165 m south of the Site. The landfill received inert, industrial, commercial, household and special waste and liquid sludge between 1965 and 1968. There are one or more registered landfills located within 500 m of the Site. These include: Clayton Vale Power Station landfill is located c. 435 m south west of the Site. Site Category: Landfill. Max Input Rate: Large. Dated: 12th March 1979. Authorised Waste: Construction And Demolition Wastes, Mine And Quarry Wastes - Mill Rejects and Pulverised Fuel Ash. Prohibited Waste: Liquid/Sludge Wastes. Status: Cancelled. There are no Local Authority listed historical landfills located within 500 m of the Site. The following other waste sites are registered within 500 m of the Site: 0 Records of registered waste transfer sites. 0 Records of registered waste treatment or disposal sites. 0 Records of licenced waste management facilities.	POTENTIAL SOURCES OF CONTAMINATION	The potentially contaminative land uses/activities identified in close vicinity of the Site may pose a contamination hazard to the Site should relevant contaminant pathways exist. Given the absence of any waste treatment, transfer or disposal sites within close proximity of the Site no associated contamination hazards have been identified.	LIKELY	PROBABILITY OF CONTAMINATION

2.2 Conceptual understanding (potential sources of contamination)

Rn Radon (see environmental data report in Section 3.3 for full listing)	According to current UK radon mapping the Site lies in an area where 1 to 3% of homes are at or above the UK radon action level (200 Bq/m3).	POTENTIAL SOURCES OF CONTAMINATION	1 to 3% of homes are at or above the UK radon action level (200 Bq/m3)	LOW LIKELIHOOD	PROBABILITY OF CONTAMINATION
--	---	---	---	-----------------------	-------------------------------------

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

 Geology and Groundwater <i>(see the environmental data report in Section 3.3 for full details)</i>	British Geological Survey mapping indicates that the underlying superficial geology consists of Till, Devensian (TILLD) which comprises diamicton and is classified as a Secondary (undifferentiated) Aquifer. British Geological Survey mapping indicates that the bedrock geology consists of Collyhurst Sandstone Formation (CS) which comprises of sandstone and is classified as a Principal Aquifer. According to the GeoSmart Groundwater Flood Risk (GW5) Map (GeoSmart, 2021). The risk of groundwater flooding at the Site is 'negligible'. The Site does not lie within a groundwater Source Protection Zone (SPZ). The following groundwater abstraction licences are held within 1 km of the Site: Manchester Abattoir slaughtering: general use (medium loss) water abstraction located c. 765 m east of the Site.	POTENTIAL RECEPTORS	A Secondary (Undifferentiated) Aquifer is assigned in cases where it has not been possible to attribute either category A or B to a rock type. In most cases, this means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type. A Principal Aquifer comprises rock or drift deposits that have high permeability - meaning they usually provide a high level of water storage. They may support strategic water supply and/or river base flow. Based on the susceptibility of the Site to groundwater flooding, a groundwater flood risk assessment is not considered necessary for the Site. The depth to groundwater beneath the Site is unknown. The presence of one or more groundwater abstraction licences within close proximity of the Site indicates a reasonable groundwater resource potential.	MEDIUM	POTENTIAL SEVERITY OF IMPACT
--	--	-----------------------------------	---	----------------------	--

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

 Geohazards (see the environmental data report in Section 3.3 for full details)	The Site lies within an area of historical coal mining activity. There are no brine affected areas within 75 m of the Site. The following are located within 500 m of the Site: Artificial ground / Made Ground is anticipated on-Site, associated with historical development and demolition activities. There are no natural hazards (with a hazard rating of moderate or above) at or within 50 m of the Site.	POTENTIAL RECEPTORS	Although the Site lies within an area of historic coal mining, as the Site is not located within a Coal Authority Development High Risk Area there is no specific requirement to submit any coal mining information with a planning application and the Coal Authority will not be consulted by the local planning authority (LPA). The LPA are likely to include the Coal Authority Standing Advice as an informative note with the decision notice. The Site does not lie within an area of former brine working and is therefore unlikely to be affected by related ground stability issues. BGS recorded Mineral Sites Cheetham Fold Clay Pit c. 250 m north west. Type: Opencast. Commodity: Common Clay and Shale. Status: Ceased Mining Instability Inconclusive Coal Mining recorded on-Site. Source: Ove Arup & Partners. BGS GeoIndex Onshore mapping does not have any artificial deposits recorded at the Site. However, there is a large area of Made Ground (undivided) - artificial deposit located c. 10 m south of the Site.	MEDIUM	POTENTIAL SEVERITY OF IMPACT
--	--	-----------------------------------	--	----------------------	--

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

 Surface water <i>(see the environmental data report in Section 3.3 for full details)</i>	The nearest water feature is a pond, located c. 220 m south east of the Site boundary. The nearest significant water feature (River Medlock) is located c. 240 m south. The Site lies within a Flood Zone 1 (low probability). There are no surface water abstraction licences within 1 km of the Site.	POTENTIAL RECEPTORS	Given the distance from the Site, the sensitivity of local surface waters is judged to be low.	MILD	POTENTIAL SEVERITY OF IMPACT
 Environmental designations <i>(see the environmental data report in Section 3.3 for full details)</i>	The following environmentally sensitive land uses are present within 500 m of the Site: Clayton Vale (Local Nature Reserve) located c. 165 m south of the Site.		Given the distance from the Site, the sensitivity of local environmental designations is judged to be low.	MILD	
 Human receptors	Proposed residents/users of the Site plus neighbouring residences.		Human receptors are proposed to be present on Site.	SEVERE	

2.4 Regulator perspective

GeoSmart consultant	Jessica Bayliff	Manchester City Council
Consultation outcome	The Council decline to answer any queries relating to the Site other than through formal chargeable consultation.	
Planning Record Review	There is one planning application relating to the Site from 1990 (ref: 036182) for the change of use from a launderette to a furniture shop. This application was approved.	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
On-Site sources - Commercial (Launderette & Furniture Shop)								
1	Potential for inorganic and low volatility organic contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	Given the potential presence of Made Ground beneath the Site (reflecting the former commercial land use), any residual contamination associated with this material has the potential to impact on future site users particularly in garden areas.
2		Consumption of home grown produce	HH		MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	
3		Ingress into water supply pipework and subsequent water ingestion	HH		MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	
4		Building materials in direct contact with aggressive ground	PROP	Future Site buildings	MILD	LOW LIKELIHOOD	LOW RISK	Given the potential presence of Made Ground beneath the Site, it would be considered prudent to verify the underlying ground condition prior to foundation design.
5		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Till, Devensian (a Secondary (undifferentiated) Aquifer)	MILD	LOW LIKELIHOOD	LOW RISK	The superficial geology is likely to offer some protection to the underlying groundwater from surface based contaminants.
6		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Collyhurst Sandstone Formation (a Principal Aquifer)	MEDIUM	UNLIKELY	LOW RISK	
7		Dissolution into pore water/shallow groundwater and subsequent lateral migration	CW	Pond (c. 220 m south east) River Medlock (c. 240 m south)	MILD	UNLIKELY	VERY LOW RISK	The risk classification reflects the reasonable distance to the nearest surface water features.
8		Dissolution into aqueous phase and preferential migration via drainage structures	CW		MILD	UNLIKELY	VERY LOW RISK	
9		Dissolution into pore water/shallow groundwater and subsequent lateral migration	ECO	Clayton Vale (Local Nature Reserve) (c. 165 m south)	MILD	UNLIKELY	VERY LOW RISK	The risk classification reflects the reasonable distance to the nearest sensitive land use.

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
10	Potential for volatile organic contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	Given the potential presence of Made Ground beneath the Site (reflecting the former commercial land use), any residual contamination associated with this material has the potential to impact on future site users particularly in garden areas.
11		Consumption of home grown produce	HH		MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	
12		Ingress into water supply pipework and subsequent water ingestion	HH		MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	
13		Migration of vapours to surface; inhalation indoors	HH		MEDIUM	UNLIKELY	LOW RISK	It is plausible that the source mass associated with any volatile contaminants that were originally present on-Site may have been significantly reduced due to the effects of volatilisation and degradation over time.
14		Migration of vapours to surface; inhalation outdoors	HH		MEDIUM	UNLIKELY	LOW RISK	
15		Building materials in direct contact with aggressive ground	PROP	Future Site buildings	MILD	LOW LIKELIHOOD	LOW RISK	Given the potential presence of Made Ground beneath the Site, it would be considered prudent to verify the underlying ground condition prior to foundation design.
16		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Till, Devensian (a Secondary (undifferentiated) Aquifer)	MILD	LOW LIKELIHOOD	LOW RISK	The superficial geology is likely to offer some protection to the underlying groundwater from surface based contaminants.
17		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Collyhurst Sandstone Formation (a Principal Aquifer)	MEDIUM	UNLIKELY	LOW RISK	
18		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Pond (c. 220 m south east) River Medlock (c. 240 m south)	MILD	UNLIKELY	VERY LOW RISK	The risk classification reflects the reasonable distance to the nearest surface water features.
19		Dissolution into aqueous phase and preferential migration via drainage structures	CW		MILD	UNLIKELY	VERY LOW RISK	
20		Dissolution into pore water/shallow groundwater and subsequent lateral migration	ECO	Clayton Vale (Local Nature Reserve) (c. 165 m south)	MILD	UNLIKELY	VERY LOW RISK	The risk classification reflects the reasonable distance to the nearest sensitive land use.

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
21	Potential for asbestos containing materials within the subsurface soils	Liberation of sub surface ACMs and inhalation of asbestos fibres	HH	Future Site occupants	MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	Given the age of the former building structures asbestos-containing material may have been present within the building fabric and may therefore have entered the surrounding subsoils.
22	Potential for dissolved phase contaminants to be present within shallow groundwater	Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Till, Devensian (a Secondary (undifferentiated) Aquifer)	MILD	LOW LIKELIHOOD	LOW RISK	The superficial geology is likely to offer some protection to the underlying groundwater from surface based contaminants.
23		Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Collyhurst Sandstone Formation (a Principal Aquifer)	MEDIUM	UNLIKELY	LOW RISK	
24		Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Pond (c. 220 m south east) River Medlock (c. 240 m south)	MILD	UNLIKELY	VERY LOW RISK	The risk classification reflects the reasonable distance to the nearest surface water features.
25		Lateral and vertical groundwater movement via natural or artificial flow paths	ECO	Clayton Vale (Local Nature Reserve) (c. 165 m south)	MILD	UNLIKELY	VERY LOW RISK	The risk classification reflects the reasonable distance to the nearest sensitive land use.
26	Potential for elevated methane to be present within the sub-surface soils	Lateral and vertical migration into on-Site buildings; potential to cause an explosion	HH	On-Site properties and their occupants	SEVERE	UNLIKELY	MODERATE/LOW RISK	Based on the prevailing conceptual understanding an appreciable on-Site gas source is considered unlikely. Since the Site is located within a coal mining area, there is potential for there to be a gas risk which could impact future Site users, however, according to Coal Authority mapping the Site is within a 'Development Low Risk Area' of the defined coalfield; whilst coal mining has taken place in this area, it was at such depth not to pose a public safety or ground stability risk to new development according to Coal Authority guidance. The risk classification is a reflection of the severity of consequences rather than the likelihood of occurrence.
27		Lateral migration towards off-Site buildings; potential to cause an explosion	HH	Off-Site properties and their occupants	SEVERE	UNLIKELY	MODERATE/LOW RISK	
28	Potential for elevated carbon dioxide to be present within the subsurface soils	Lateral and vertical migration into on-Site buildings; potential to cause asphyxiation	HH	Occupants of on-Site buildings	SEVERE	UNLIKELY	MODERATE/LOW RISK	
29		Lateral migration towards off-Site buildings; potential to cause asphyxiation	HH	Occupants of off-Site buildings	SEVERE	UNLIKELY	MODERATE/LOW RISK	
30	Potential for radon within the subsurface	Lateral migration towards on-Site buildings; potential to cause long term health effects	HH	Occupants of on-Site buildings	MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	The Site lies in an area where 1 to 3% of homes are at or above the UK radon action level (200 Bq/m3).
OVERALL RISK RATING							MODERATE/LOW RISK	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
Off-Site sources - Victoria Rubber Works c. 210 m east (1893 - 1984) - Motor Works c. 115 east (1931 - 1951) - Furniture Works c. 115 m east (1951 - 2005)								
31	Potential for both inorganic and volatile organic contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	MEDIUM	UNLIKELY	LOW RISK	Given the distance from the Site and the likely low permeability of the superficial geology, it is considered unlikely that any contaminants associated with the former off-Site industrial land uses would migrate towards and subsequently impact the Site.
32		Consumption of home grown produce	HH		MEDIUM	UNLIKELY	LOW RISK	
33		Ingress into water supply pipework and subsequent water ingestion	HH		MEDIUM	UNLIKELY	LOW RISK	
34		Migration of vapours to surface; inhalation indoors	HH		MEDIUM	UNLIKELY	LOW RISK	Given the distance from the Site and the likely low permeability of the superficial geology, it is considered unlikely that any contaminants associated with the former off-Site industrial land uses would migrate towards and subsequently impact the Site.
35		Migration of vapours to surface; inhalation outdoors	HH		MEDIUM	UNLIKELY	LOW RISK	It is plausible that the source mass associated with any volatile contaminants that were originally present may have been significantly reduced due to the effects of volatilisation and degradation over time.
Off-Site sources - Clayton Vale Power Station landfill is located c. 30 m south west of the Site. The landfill received inert and industrial waste between 1901 and 1980. - Clayton Vale landfill is located c. 160 m south of the Site. The landfill received inert and industrial waste from 1901. The last input date is unknown. - Clayton Vale Power Station landfill is located c. 165 m south of the Site. The landfill received inert, industrial, commercial, household and special waste and liquid sludge between 1965 and 1968.								
36	Potential for elevated methane to be present within the sub-surface soils	Lateral and vertical migration into on-Site buildings; potential to cause an explosion	HH	On-Site properties and their occupants	SEVERE	LOW LIKELIHOOD	MODERATE RISK	Given there is a landfill recorded in close proximity to the Site, there is the potential for gas generation which could impact the Site. The risk classification is based upon the consequence as opposed to the likelihood of occurrence.
37	Potential for elevated carbon dioxide to be present within the subsurface soils	Lateral and vertical migration into on-Site buildings; potential to cause asphyxiation	HH	Occupants of on-Site buildings		LOW LIKELIHOOD	MODERATE RISK	
	OVERALL RISK RATING						MODERATE RISK	

2.6 Next Steps

✓	Phase 2 intrusive investigation		Given the potential for Made Ground to be present on the Site and also the presence of former landfills within close proximity, there is the potential for contamination to be present at the Site. It is therefore recommended that a proportionate programme of site investigation and monitoring works be undertaken in order to establish the presence or absence of contamination and to enable a quantitative assessment of the associated environmental risks. Further advice: Please contact info@geosmartinfo.co.uk for further information regarding the need for a Phase 2 investigation. For information on reputable site investigation companies, enquiries can be made directly to your local authority or via www.endsdirectory.com
---	--	---	--

2.7 Other recommendations

✓	Radon assessment / mitigation measures		Given that the Site lies in an area where 1 to 3% of homes are at or above the UK radon action level (200 Bq/m3), we recommend that either further Radon Assessment is undertaken or that appropriate Radon Mitigation Measures are included in any future built structures. Further information can be found at http://www.ukradon.org/information/ Additionally local building control may have further knowledge in relation to radon risks within the area.
✓	Consider Coal Mining Risk		As the Site is not located within a Coal Authority Development High Risk Area there is no specific requirement to submit any coal mining information with a planning application and the Coal Authority will not be consulted by the local planning authority (LPA). The LPA are likely to include the Coal Authority Standing Advice as an informative note with the decision notice. Consideration should however be given to further investigation of the coal mining risk.

3. Supporting Information

The following supporting information is contained in this section:

Section	Content
3.1	Referenced materials used in the EnviroSmart reporting
3.2	Site photographs
3.3	Published environmental data records (Landmark Envirocheck report 50 Amos Avenue, Manchester, M40 2RS. REF: 290209735_1_1) including: • Aerial photographs and site map • Environmental permits, incidents and registers • Landfill and other waste sites • Current land use information • Geology • Hydrogeology and hydrology • Flooding • Designated environmentally sensitive sites • Other environmental factors
3.4	Risk assessment methodology
3.5	Historical land use maps

Disclaimer

This report has been prepared by GeoSmart in its professional capacity as soil and water specialists, with reasonable skill, care and diligence within the agreed scope and terms of contract and taking account of the manpower and resources devoted to it by agreement with its client, and is provided by GeoSmart solely for the internal use of its client.

The advice and opinions in this report should be read and relied on only in the context of the report as a whole, taking account of the terms of reference agreed with the client. The findings are based on the information made available to GeoSmart at the date of the report (and will have been assumed to be correct) and on current UK standards, codes, technology and practices as at that time. They do not purport to include any manner of legal advice or opinion. New information or changes in conditions and regulatory requirements may occur in future, which will change the conclusions presented here.

This report is confidential to the client. The client may submit the report to regulatory bodies, where appropriate. Should the client wish to release this report to any other third party for that party's reliance, GeoSmart may, by prior written agreement, agree to such release, provided that it is acknowledged that GeoSmart accepts no responsibility of any nature to any third party to whom this report or any part thereof is made known. GeoSmart accepts no responsibility for any loss or damage incurred as a result, and the third party does not acquire any rights whatsoever, contractual or otherwise, against GeoSmart except as expressly agreed with GeoSmart in writing.

Important consumer protection information

This search has been produced by GeoSmart Information Limited, Suite 9-11, 1st Floor, Old Bank Buildings, Bellstone, Shrewsbury, SY1 1HU.

Tel: 01743 298100

Email: info@geosmartinfo.co.uk

GeoSmart Information Ltd is registered with the Property Codes Compliance Board (PCCB) as a subscriber to the Search Code. The PCCB independently monitors how registered search firms maintain compliance with the Code.

The Search Code

- provides protection for homebuyers, sellers, estate agents, conveyancers and mortgage lenders who rely on the information included in property search reports undertaken by subscribers on residential and commercial property within the United Kingdom
- sets out minimum standards which firms compiling and selling search reports have to meet
- promotes the best practice and quality standards within the industry for the benefit of consumers and property professionals
- enables consumers and property professionals to have confidence in firms which subscribe to the code, their products and services.

By giving you this information, the search firm is confirming that they keep to the principles of the Code. This provides important protection for you.

The Code's core principles

Firms which subscribe to the Search Code will:

- display the Search Code logo prominently on their search reports
- act with integrity and carry out work with due skill, care and diligence
- at all times maintain adequate and appropriate insurance to protect consumers
- conduct business in an honest, fair and professional manner
- handle complaints speedily and fairly
- ensure that products and services comply with industry registration rules and standards and relevant laws
- monitor their compliance with the Code

Complaints

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure. If you remain dissatisfied with the firm's final response, after your complaint has been formally considered, or if the firm has exceeded the response timescales, you may refer your complaint for consideration under The Property Ombudsman scheme (TPOs). The Ombudsman can award up to £5,000 to you if the Ombudsman finds that you have suffered actual financial loss and/or aggravation, distress or inconvenience as a result of your search provider failing to keep to the Code.

Please note that all queries or complaints regarding your search should be directed to your search provider in the first instance, not to TPOs or to the PCCB.

TPOs contact details:

The Property Ombudsman scheme

Milford House

43-55 Milford Street

Salisbury

Wiltshire SP1 2BP

Tel: 01722 333306

Fax: 01722 332296

Email: admin@tpos.co.uk

You can get more information about the PCCB from www.propertycodes.org.uk

Please ask your search provider if you would like a copy of the search code

Complaints procedure

GeoSmart Information Limited is registered with the Property Codes Compliance Board as a subscriber to the Search Code. A key commitment under the Code is that firms will handle any complaints both speedily and fairly. If you want to make a complaint, we will:

- Acknowledge it within 5 working days of receipt.
- Normally deal with it fully and provide a final response, in writing, within 20 working days of receipt.
- Keep you informed by letter, telephone or e-mail, as you prefer, if we need more time.
- Provide a final response, in writing, at the latest within 40 working days of receipt.
- Liaise, at your request, with anyone acting formally on your behalf.

If you are not satisfied with our final response, or if we exceed the response timescales, you may refer the complaint to The Property Ombudsman scheme (TPOs): Tel: 01722 333306, E-mail: admin@tpos.co.uk.

We will co-operate fully with the Ombudsman during an investigation and comply with his final decision. Complaints should be sent to:

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
