Trespa® Meteor® Focus

Trespa® Meteor® Focus creates an intriguing façade going beyond Uni colours.

Trespa® has a strong reputation for design and innovation as one of the leading manufacturers of decorative high pressure laminate panels. The versatile panels can be applied as ventilated façade cladding, fascia's, soffits, balustrades and balcony and sandwich panels.

With the development of the Trespa® Meteor® Focus collection, the Trespa® Technology Centre team is now exploring this boundless creative space where history, culture, imagination and observation intertwine. The result is a unique set of designs: originals Santiago and Brooklyn, plus new designs; Chester, Bilbao and Tribeca. Santiago is an "abstract interpretation of a city scape, in which each building is individually designed and built". The irregular pattern emulates the city scape, perfectly interpreting a skyline. Available in three colourways there are options to suit most creatives. The second design, Brooklyn, focuses on faint traces within the façade panel to reveal a story. Available in six colour options the Brooklyn range evokes interest, revealing part of a story, intriguing onlookers.
