1.0 Introduction

1.1 Background

1.1.1 RoC Consulting has been appointed by Ms Timea Nasca of Far East Consortium Ltd (FEC Ltd), on behalf of our client Northern Gateway (FEC) No.11 Limited, to conduct a Phase 1 Desktop Land Contamination Study and site walkover across Plots NT02, NT03 and NT04 Dantzic Street, Manchester (the site). It is understood that the site is to be redeveloped as a high-rise residential development varying in height up to 30 plus storeys in accordance with Hawkins Brown drawing RDB-HBA-2X-LG-SK-A-SK_0001 Rev P1 Plots NT02 and NT03) and MacCreanor Lavington drawing RDB-MLM-2X-XX-DR-AR-220405-01 (Plot NT04) contained within Appendix A. The site forms part of the wider Northern Gateway Masterplan.

1.1.2 The purpose of this desk-based study is to provide a preliminary assessment of the site relating to current and historic operations to establish baseline geo-environmental and geotechnical conditions. This report presents a factual account and highlights the more pertinent points with interpretation relating to potential sources of soil or groundwater contamination that may be present within site soils.

1.1.3 The information obtained during this assessment has also been used to collate a Preliminary Conceptual Site model for the proposed development to assist with the estimation of risks arising from contaminated land related concerns. Where required, this model will form the basis for future Phase 2 Intrusive Site Investigation works to further refine (and mitigate against) risks posed to future site users.

1.2 Terms of Reference

1.2.1 The desk-based environmental assessment was carried out following receipt of an instruction from Ms Timea Nasca of FEC Ltd.

1.3 Objectives

1.3.1 The objectives of the desk-based study were:

- To characterise the environmental setting of the site, including the geology, hydrogeology and hydrology of the site and surrounding areas from published data
- To identify (where possible) potential sources of ground, groundwater or surface water contamination and/or soil gas (hazardous materials) arising from past and/or current activities at the site and/or neighbouring properties
- To formulate a Preliminary Conceptual Site model and assess the risks posed to identify receptors soil and / or groundwater contamination or ground gas ingress

- As required, inform proposals for any intrusive site investigation works or remedial works required to ensure the sites safe redevelopment
- To undertake a preliminary geotechnical assessment of site conditions to identify potential abnormal items that may arise as a result of the site redevelopment

1.4 Scope of Work

1.4.1 The overall scope of work comprised reference to a Landmark 'Envirocheck' report as well as other published sources, and includes:

- Review of published geological, hydrogeological and hydrological information to establish environmental sensitivities at the site and within the surrounding environment
- Completion of a site walkover survey to establish present day site setting and conditions
- Review of historical map information to identify previous usage of the site and its immediate surroundings and search of a commercial environmental database, to identify potential sources of land contamination and potential environmental impacts
- Preparation of a report, outlining the findings and recommendations, including requirements for any further work considered necessary to better quantify any environmental hazards identified, and taking account of the site's current status

1.5 Limitations of Study Assessment

1.5.1 The comments made in this report are based on the data available at the time of its completion. Any unusual or conflicting evidence discovered during any future site works must be presented to RoC Consulting as soon as possible so that any implications may be considered.

1.5.2 Additional information, changes in legislation or revised practices may necessitate re-interpretation of part or all of this report. Additionally, site redevelopment and/or a change in end use will require reinterpretation of the assessment.

1.5.3 The accuracy of the data supplied by third parties should be considered in the context of any known site conditions for which RoC Consulting cannot be held liable.

1.5.4 It should be noted that subsequent revisions of the proposed redevelopment or site boundary away from the above-mentioned drawing may result in the full or partial re-interpretation of this report and assessment.

1.5.5 The report has been produced by RoC Consulting for the client solely, for the purposes of a review of information for the above-mentioned site. It may not be used by any person for any other purpose other than that specified without the express written permission of RoC Consulting. Any liability arising out of its use by a third party for purposes not wholly connected with the above shall be the responsibility of that party who shall indemnify RoC Consulting against all claims, costs, damages and losses arising out of such use.

2.0 Desk Top Review

2.0.1 The following chapter provides an overview to most salient findings of our desk based geo-environmental assessment. This information has been used to formulate the collation of a Preliminary Conceptual Site Model (as discussed in Section 3.0) to assess the potential impacts and risks associated with geo-environmental and geotechnical concerns across the site.

2.0.2 Supporting information and evidence has been provided within enclosed appendices and it is recommended reference be made to these documents / plans when reviewing this report.

2.1 Sources of Information

2.1.1 Background information on the site was acquired from the following sources:

- Envirocheck at the Ordnance Survey
- British Geological Survey 1" to 1 mile/1:10'000, solid & drift
- Environment Agency Groundwater Vulnerability Map
- Radon Atlas of England
- Observations from site walkover survey completed on the 09/03/2022
- Previous desk study report completed on Plot NT02 by Hydrock (2015) ref: R/151819/G001
- Historic Architectural Plans submitted to Building Control and indexed by Manchester Central Library
- Previous site investigation report on Plot NT04 completed by Allied Exploration and Geotechnics Ltd (2019)
- Previous site investigation report completed on Plot NT02 by LK Group (2020) ref: CL-602-LKC 20 1060-01

2.2 Site Location and Description

2.2.1 The site comprises an area of approximately 2.3 hectares adjacent to the south of Dantzic Street, Manchester centred around National Grid Reference E384690 N399470.

2.2.2 The site has historically been divided into three plots for planning purposes – Plot NT02 in the west, Plot NT03 in the centre and Plot NT04 in the east. Each of these has distinct land uses. In this report 'the site' refers to all three plots. While it is currently proposed to develop these plots together, we have retained these names for clarity when discussing local site features. A plan depicting the boundaries between the different plots is contained within Appendix A (ref: 4328-ROC-XX-XX-SK-ESK102).

Plot NT02

2.2.3 Plot NT02 occupies the western portion of the site and comprises a light industrial building with several smaller buildings, associated access road and areas of hardstanding. The boundaries of Plot NT02 are formed by Dantzic Street to the north with an area occupied by caravans beyond, the adjacent Victoria Riverside development to the west, a road and Network Rail viaduct to the south and Plot NT03 to the east. The eastern and southern portions of the site were formerly occupied by Farlam Waste Management Ltd a skip hire and waste handling company. The light industrial building was operated by Astra Signs Ltd; a sign making company and is now understood to be vacant.

2.2.4 The topography of Plot NT02 is relatively flat with levels varying between 31.20mAOD at the interface with Dantzic Street and 34.80mAOD in the southern portion of the site.

2.2.5 Plot NT02 is accessed by a gate on the northern site boundary onto Dantzic Street.

Plot NT03

2.2.6 Plot NT03 occupies the centre of the site. It is understood that a portion of the south of Plot NT03 is owned by Network Rail. The north of the plot is largely covered with hardstanding while the southern part and Network Rail land are occupied by two large earth mounds which likely overlap somewhat. The northernmost of these two mounds comprises loose topsoil-like material which is managed by the occupiers of the plot, Ryan Topsoil Ltd. South of this is the Network Rail land, which is a further mound largely covered with overgrown vegetation, backing onto the adjacent railway viaduct which forms the southern boundary. It is currently unclear if this slope provides support to viaduct structure or what structures may be behind it.

2.2.7 Plot NT03 is also accessed via a gate onto Dantzic Street.

2.2.8 A small portion of NT03, also covered with hardstanding, is fenced off from the remainder of the plot and accessed separately, also from Dantzic Street. At the time of writing, this was occupied by a concrete batching plant.

2.2.9 Levels on Plot NT03 vary significantly due to the presence of a large stockpile of topsoil which rise to 49.11mAOD at its peak and sloping to 33.00mAOD at its base in the northern portion of the plot. The hardstanding working area, extending from the base of the mound to the northern boundary, varies in elevation from 33.00 to 31.38mAOD.

Plot NT04

2.2.10 Plot NT04 is comprised of semi vegetated disused land. The western boundary is formed by Plot NT03, the southern boundary by the Network Rail Viaduct, Dantzic Street and Dalton Street form the northern boundary along with warehousing, and the River Irk beyond. The eastern boundary is formed by Dalton Street and residential housing. During the site walkover relic walls of a former structure were encountered in the northern portion of Plot NT04, likely part of the historic Dalton Print Works. Parts of the south of the site are covered with hardstanding, with two stockpiles of gravel present at the time of the site walkover.

2.2.11 Plot NT04 falls from south (41.50mAOD) to north (32.00mAOD). Levels in the eastern portion of NT04 generally appears to be higher than the rest with the north-eastern corner of the site generally sitting at circa 39.00 to 40.00mAOD.

2.2.12 Plot NT04 is accessed via a gate onto Dalton Street in the east of the plot. At the time of the site visit this was blocked by concrete blocks.

Adjacent sites

2.2.13 The south is bounded to the north by Dantzic Street and Dalton Street. Adjacent to the west of the site is the construction site for the Victoria Riverside development. Adjacent to the south and east is a large Railway Viaduct, up to 10m above the site in some locations. This incorporates both track and areas of sidings. The viaduct wall is comprised primarily of brick where exposed, with different sections visibly constructed at different times.

2.2.14 Beyond Dantzic Street to the north is an area occupied by caravans and a disused brick commercial building formerly occupied by Theos Timber. Beyond this is the River Irk, a small river which is in a visibly poor condition with large amounts of rubbish present on the riverbank.

2.2.15 Further land uses within the immediate vicinity include a mixture of railway land, scrapyards, construction sites, car parking and residential housing.

2.2.16 A selection of photographs showing the site at the time of inspection are provided within Appendix A ref: 4328-ROC-ZZ-XX-SK-ES-ESK101.

2.3 Site History

2.3.1 The site history has been compiled by reference to historical Ordnance Survey maps obtained from Envirocheck Report presented in Appendix B. Aerial imagery of the site dating from 1939 has also been obtained and is contained in Appendix A ref: 4328-ROC-XX-XX-SK-ES-ESK107-108.

2.3.2 Table 2.1 (below) gives an overview of potentially contaminative land uses onsite.

Table 2.1: On Site History Overview

Land Use	Location	From	To
Residential	Covering much of the northern portion of NT02, the northern and central portion of NT03 and the interface with Dalton Street on NT04. Large amounts of residential housing cleared by 1958 to 1989 records.	1848	1977 to 1990
Watercourse	running roughly north to south through NT02.	1848	1891
Smithy	North-western corner of NT02.	1891	1948 to 1952
Victoria Screw & Bolt Works	Southwestern corner of NT02 Extended in 1908 incorporating the former Victoria Paint Works Large chimney towards the southern portion of the building footprint. Architectural plans not available.	1891	1948 to 1952
Victoria Paint Works	Southern portion of NT02.	1891	1908
Unspecified Works	Central/southern portion of NT03. Modified and labelled as scrap metal works 1968 to 1991. Labelled as works 1984-1989. By 2006 most of the buildings have been demolished with a single small northern building remaining.	1891	2006
Dalton Works (Printing)	Southern portion of NT04 Expanded 1968 to 1991.	1891	2013
Signal Box	Embankment within the southern portion of NT03 adjacent the railway viaduct. No longer depicted on 1968 to 1991 records. However, records dated 1980 to 1986 display a contour line where the embankment was previously located suggesting the embankment remained in situ when the signal box was removed.	1908	1968 to 1991
Collyhurst Foundry	Occupying the area of the former bolt works on Plot NT02.	1948 to 1952	1958 to 1968
Tanks	Northwest corner of Plot NT02.	1948 to 1952	1958 to 1989
Ruins	Former residential houses on Plot NT03 and residential houses adjacent Collyhurst Foundry on Plot NT02.	1948 to 1952	1958 to 1989
Tripe Works	Southern Boundary of NT02.	1951 to 1953	1958 to 1989
Warehouse / Light Industrial Building	Forming the northernmost unit of the light industrial units currently on Plot NT02. Expanded in 1968 to 1991 to join with the rubber works located adjacent the sites western boundary.	1958 to 1989	Present

Land Use	Location	From	To
	Mapping from 2006 indicate the western portion of the works adjacent the site to have been demolished and only the large present-day warehouse and a small northern building remaining (Which is demolished on 2021 records).		
Asphalt Works	Location of the former Collyhurst Foundry chimney on Plot NT02. Cleared with only small building present and labelled as a depot on the 1986 to 1990 records.	1968 to 1991	1989
Farlam Waste Management Ltd	Occupied the eastern portion of Plot NT02.	Unknown	2020
Astra Signs Ltd	Occupied the light industrial building on Plot NT02.	Unknown	Late 2010s to early 2020s

On Site Historical Land Uses

2.3.3 The site has accommodated a number of industrial land uses in the past. The history of each individual plot is summarised below.

Plot NT02

2.3.4 The Victoria Screw and Bolt works was first depicted as being present in the southern portion of Plot NT02 on records from 1891 and was extended to incorporate the former Victoria Paint Works in 1908 covering the entirety of the southern portion of Plot NT02. The Victoria Paint works itself is indicated as being present between 1891 and 1908. Records dated 1948 to 1952 see the building converted to the Collyhurst Foundry up until some point between 1958 to 1968 when much of the building was demolished and an Asphalt Works and Tripe Works were constructed within its general footprint.

2.3.5 Records from 1958 to 1989 show the construction of a light industrial / warehousing building in the eastern portion of Plot NT02 which became a part of the rubber works which had previously only operated adjacent to the western boundary of the site. Architectural plans of the rubber works as held by Manchester Central Library dated 1916 have been viewed as part of this assessment and are presented in Appendix F. Mapping dating from 2006 indicates much of this structure to have been demolished and only the present-day light industrial building and a smaller building along the northern boundary of Plot NT02 (now also demolished). The light industrial building is known to have previously been occupied by Astra Signs Ltd (a sign manufacturer) and is believed to have used solvents and paints although the previous Hydrock report states that the paints used on site were water based and therefore likely had low contaminative potential.

2.3.6 A waste management company known as Farlam Waste Management is known to have operated in the eastern portion of Plot NT02 only having ceased operation within the past decade.

2.3.7 No relevant architectural plans of historical site buildings are known to be held by Manchester Central Library. Plans of the Rubber Works adjacent to the west of the site have been observed and are presented in Appendix F.

Plot NT03

2.3.8 An unspecified works possessing a chimney was present in the central area of NT03 from 1891 to the mid to late 20th century when it became a scrap metal works. The usage then changed, and the plot is currently operated by Ryan Topsoil Ltd and is mostly occupied by a large mound of loose topsoil like material.

2.3.9 A small area of the southern boundary of the plot was previously occupied by a signal box on an embankment adjacent the railway viaduct. It is not clear from historical records if there is a retaining wall which supports the viaduct in this location or if the viaduct is supported by the embankment which is visible on historic plans and aerial photography and still present today.

Plot NT04

2.3.10 Dalton Works (a print works) was present on NT04 from 1891 until it was demolished on records dating from 2013. It occupied the southern area of the site and a small area adjacent Dalton Street sitting at a slightly elevated position to the rest of the site. Relic retaining walls appear to be present in the vicinity of the former works in the present day.

Adjacent Historical Land Uses

2.3.11 The site is located within an area which historically has seen heavy industrial land uses. Table 2.2 (provided below) gives an overview to the locality and proximity of potentially contaminative land uses within close proximity to the site.

Table 2.2: Off Site History Overview

Distance (m)	Direction	Description	From	To
<10	South	Lancashire and Yorkshire railway. Newtown Sidings added in 1891 bringing the railway up against the site's southern boundary. Tracks cleared from Newtown Siding 1977 to 1990.	1848	Present
50	South	Gas Works, initially 3 small gasometers, which appear to have been replaced by 4 larger gasometers by 1891 when it is referred to as the Rochdale Road Gas Works. In 1908 the easternmost gasometer has been removed and the building associated with the gas works is extended eastwards. Some ruins noted on records 1948 – 1952. Mapping from 1968 to 1991 indicates works to have reduced in scale.	1848	1984 to 1989

Distance (m)	Direction	Description	From	To
		Gasometers cleared 1984 to 1989 and replaced by a depot.		
180	Northeast	Dye Works.	1848	1891
10	North	Two gasometers. Cleared 1968 to 1991.	1891	1968 to 1991
65 - 100	Northwest	Dye works, chemical works two reservoirs and print works on opposite bank of the River Irk. In 1908 dyeworks listed as disused and print works labelled as Fireproof Plate Wall Works. Records dated 1922-33 indicate all works to have been cleared to make way for an extension to railway sidings other than the	1891	1922 to 1933
30 - 70	West	Unspecified works and Parker Street Mills. Works identified as a rubber works in 1908. Rubber works expanded to within 5m of the site's western boundary in 1922-33. Expanded onto site on records dating 1968 to 1991. See onsite history (Table 2.1) for rubber works history on site.	1891	1968 to 1991
160 – 220	West	Union Bridge Iron Works, Chemical Works and Red Bank Oil Works. In 1908 Union Bridge Iron Works extended to incorporate the area previously occupied by the Chemical Works and Oil Works. Labelled as unspecified works from 1958 – 1989. Cleared to become a car park on records from 1989.	1891	1989
200	Northeast	Two small gasometers and associated building.	1908	1968 to 1991
100 - 200	West	Chemical Works and button manufactory. 1948 to 1952 the Chemical Works became a metal foundry, and the button manufactory became a glue works. Oil works, timber yards and engineering works were also present. All identified works were labelled as unspecified works from 1958 to 1989 and a depot was also present. Several scrap yards were noted on 1992 records. By the present day most of the work's buildings have been cleared for car parking.	1891	2022
10m	North	Garage. Labelled as a Depot in 1968 to 1991 mapping. The building is believed to have most recently been used as a timber merchants.	1951 to 1988	2022

Distance (m)	Direction	Description	From	To
60 to 100m	South	Two unspecified works. The southernmost of the two works has been demolished on mapping records from 2013.	1977 to 1990	2022

2.3.12 The Lancashire and Yorkshire Railway has been present adjacent the sites southern boundary from 1848 till the present day. In 1891 the Newtown sidings were added bringing the railway right up against the site's southern boundary.

2.3.13 The Rochdale Road Gasworks is visible as early as 1848, 50m to the south of the site comprising four large gasometers and significant associated infrastructure at its peak. Two gasometers associated with the gasworks were present 10m to the north of the site on the opposite side of Dantzic Street from the site. The extent of the gasworks declined during the mid-20th century before being converted to a depot in the late 20th century. The two gasometers to the north of the site were demolished in the mid to late 20th century and have since been occupied by caravans.

2.3.14 A garage / depot was located 10m to the north of the site from the mid-20th century and is believed to have most recently been used as a timber merchants.

2.3.15 Within 200m of the west of the site, a number of historic industrial activities were recorded including a rubber works, oil works, chemical works, print works, foundry, engineering works, glue works, timber yards, scrap yards and a large iron works. The vast majority of this industry is no longer present and has been replaced by alternative land uses such as car parking. It should be noted much of this industry is a considerable distance from the site and superficial ground conditions are relatively impermeable, furthermore a number of these industries were located on the other side of the River Irk which would also serve as a boundary to contaminants migration.

2.4 Geology

2.4.1 Review of BGS geological map records (Sheet 85) indicate the site is underlain by the following:

Drift Geology: Till, Devensian – Diamicton

Solid Geology: The western portion of the site is underlain by the Chester Formation (Sandstone) and the eastern portion of the site is underlain by the Manchester Marls Formation (Mudstone). The Manchester Marls Formation underlies the Chester Formation where this is present on site. The Manchester Marls Formation is underlain by the Collyhurst Sandstone Formation at depth.

2.4.2 Four BGS boreholes are located within close proximity to the site (within Dantzic Street and Collyhurst Road).

Table 2.3: BGS Borehole Encountered Ground Conditions

Strata (Depth to base)	SJ89NW34	SJ89NW35	SJ89NW36	SJ89NW37
Made Ground	0.91mbgl	1.22mbgl	1.07mbgl	0.76mbgl
Marl	Not encountered	Not encountered	1.52mbgl	1.52mbgl
Fine Running Sand	Not encountered	Not encountered	3.66mbgl	4.72mbgl
Chester Formation	4.88mbgl (max depth unproven)	6.10mbgl (max depth unproven)	6.10mbgl (max depth unproven)	5.18mgl (max depth unproven)

2.4.3 A ground investigation was completed by LK Consult under the instructions of the previous developer and in association with the previous planning application for Plot NT02. A further investigation as part of the wider northern gateway involved the formation of two exploratory holes within Plot NT04 The scope of investigation works comprised the following:

- 5x window sampler boreholes drilled to 3.15 to 4.45mbgl (Plot NT02)
- 3x rotary boreholes drilled to a depth of 15-30mbgl (Plot NT02)
- 5x trial pits excavated to 1.30-2.20mbgl (Plot NT02)
- 1x trial pit excavated to 4.50mbgl (Plot NT04)
- 1x cable percussion borehole drilled to a depth of 3.95mbgl (Plot NT04)

2.4.4 Monitoring of groundwater on the site indicated the water table to occur at a depth ranging between 4.32 and 6.60mbgl within the underlying bedrock. No groundwater was encountered within the made ground deposits or Devensian Till.

2.4.5 A summary of the encountered ground conditions is provided in tables 2.4 and 2.5 below.

Table 2.4: Plot NT02 Encountered Ground Conditions

Strata	Description	Depth to Base
Made Ground	Gravelly sandy SILT / Sandy clayey GRAVEL with anthropogenic inclusions including brick, concrete, wood, metal, bitumen, ash clinker, pottery and glass.	0.50mbgl to 2.50mbgl
Devensian Till	Gravelly CLAY with sand bands.	2.60mbgl to 3.50mbgl
Weathered Bedrock	Reddish brown SAND occasionally gravelly.	~7.00mbgl
Solid Bedrock - Chester Formation	Weak reddish brown fine to coarse SANDSTONE (increasingly fine grained and muddy with depth). Depth to base becomes shallower eastwards.	8.06mbgl to 14.30mbgl
Solid bedrock – Manchester Marls Formation	Extremely to very weak thinly laminated red shaley MUDSTONE completely weathered in places & Weak thinly laminated red and grey SILTSTONE.	Not proven (Max depth of terminated borehole is 30m)

Table 2.5: Plot NT04 Encountered Ground Conditions

Strata	Description	Depth to Base
Made Ground	Clayey sandy GRAVEL / sandy gravelly CLAY with anthropogenic inclusions including clinker, brick, coal, macadam, slag and concrete.	2.10mbgl to 2.80mbgl
Devensian Till	Sandy slightly gravelly CLAY / Very sandy slightly gravelly CLAY.	2.40mbgl to 4.50mbgl
Weathered Bedrock (Manchester Marl Formation)	Extremely weak slightly sandy calcareous MUDSTONE interbedded with weak red SANDSTONE.	Unproven

2.4.6 There are 3 faults located within close proximity of the site. A fault is located within the eastern portion of the site running northwest to southeast down throwing to the southwest. An additional fault is located 225m to the southwest running northwest to southeast down throwing to the northeast. A third fault is located 205m to the north, runs north to south and downthrows to the west.

Mining

2.4.7 The Envirocheck report included within Appendix C, indicates that the site is located within an area which may be affected by historic Coal Mining.

2.4.8 However, with reference to the above-mentioned geological map records it is apparent the site falls outside an area where Coal Measures bedrock is present at shallow depths. The site is not located within a development high risk area. In addition, we are not aware of any commercial mineral or below ground mining workings within the Chester Formation or Manchester Marls Formation that underlies the site. As such, further investigation of mining related risks is not recommended at this time.

Radon

2.4.9 According to the environmental database search, the site is located within a lower probability radon area (less than 1% of homes are estimated to be at or above the action level). Radon protection measures are not required for new dwellings.

Ground Stability

2.4.10 Table 2.7 overleaf indicates the potential ground stability hazards on site, as obtained from the Envirocheck report.

Table 2.7: Ground Stability Hazards

Ground Stability Hazard	Risk Rating
Collapsible Ground	Very Low
Compressible Ground	Very Low
Ground Dissolution	No Hazard
Landslide	Very Low
Running Sand	Very Low
Shrinking or Swelling Clay	No Hazard – Very Low

Soil Chemistry

2.4.11 Table 2.8 indicates the background estimated soil chemistry for the site, as obtained from the site sensitivity maps within Appendix D.

Table 2.8: BGS Estimated Soil Chemistry

Determinant	Concentration
Arsenic	15 – 35 mg/kg
Cadmium	<1.8 mg/kg
Chromium	40 – 90 mg/kg
Lead	100 - 200 mg/kg
Nickel	<15 - 30 mg/kg

2.5 Hydrological

2.5.1 The Envirocheck Groundwater Vulnerability Map indicates the superficial deposits are classified as Secondary Undifferentiated with the underlying Chester Formation bedrock designated as a Principal Aquifer and the Manchester Marls designated as a Secondary B Aquifer.

2.5.2 The site is not located within an Environment Agency Source Protection Zone.

2.5.3 The site is not located within close proximity to any sensitive groundwater abstraction points (e.g., for a potable water supply well). The nearest water abstraction point is indicated 533m to the west relating to Joseph Hold Ltd. Water is abstracted from groundwater for use in breweries/wine process water, it is not clear if the permit is still valid.

2.5.4 The nearest surface water feature is indicated 21m to the north in the form of the River Irk. Water quality of this receptor indicates a GQA Grade of “E” (Poor) and a flow rate of less than 2.5 cumecs.

2.5.5 There are no active surface water abstractions at the site or within 500m of the site boundary.

2.5.6 The nearest active discharge consent is indicated 73m to the northwest and held by United Utilities for the release of storm sewage overflow into the River Irk.

2.5.7 A number of historic pollution incidents have been noted in close proximity to the site. The closest incident to the site was a category 3 minor incident occurring in 1998, 78m to the north and related to a Sewage Treatment Works with foam observed in a watercourse. There are a further 6 category 3 minor incidents that have occurred within 500m of the site.

2.5.8 The Envirocheck database indicates that there has been a single prosecution relating to authorised processes within 500m of the site. The prosecution incident was located 214m to the northwest of the site and related to the deposition of 150 cubic metres of demolition waste on land without permission.

2.5.9 A small fraction of the northern portion of the site is located within Flood Zone Two however the rest of the site is located withing Flood Zone 1. The risk of surface water flooding is deemed as very low.

2.6 Hazardous Substances

2.6.1 There are no active Control of Major Accident Hazards Sites (COMAH), Explosive Sites, Notification of Installations Handling Hazardous Substances (NIHHS), Planning Hazardous Substance Consents, Radioactive Substance or Planning Hazardous Substance Enforcements within 500m of site.

2.7 Landfill Sites and Other Waste Facilities

2.7.1 There is a single BGS recorded Landfill Site present 330m to the north of the site. There are three Historic Landfill Sites located within 500m of the site with the closest being located 205m to the north of the site. There are three Registered Waste Transfer Sites located within 500m of the site. The closest of which is located 82m to the west of the site. The licence holder for this site is Placemix Ltd and is operational as far as is known. There are no further waste facilities located within 500m of the site.

2.7.2 There are two Licensed Waste Management Facility located on site. The first is located within the eastern portion of Plot NT02 the license for which expired in 2020 and was operated by Farlam Waste Management Ltd. The second facility is located on Plot NT03 and, the license is listed as transferred and it was operated by Ryan John. Both facilities are categorised as Household, Commercial and Industrial Transfer Stations. There are a further 3 Licensed Waste Management Facilities located within 500m of the site however all licenses are shown as expired. There are a further three waste management facilities within 500m of the site.

2.8 Industrial Land Use & Processes

2.8.1 There are 6 Local Authority Pollution Prevention and Controls (LAPPC) the closest of which relates to Tan Yard Metal Ltd and is air pollution control for the extraction of nonferrous metal from scrap although the license has been revoked. All the remaining LAPPCs relate to air pollution control and have been revoked.

2.8.2 There are no Contaminated Land Register Entries and Notices (CLREN), Integrated Pollution Control (IPC), Integrated Pollution Prevention Control (IPPC) or Local Authority Pollution Prevention and Control Enforcements (LAPPCE) relating to authorised processes at the site or within 250m of the site boundary.

2.8.3 Contemporary trade directory entries indicate *there are active entries for the site.* Active entries for the immediate area indicate activity includes garage services, printers, textile manufacturing, packaging wrapping equipment and supplies, and brewers.

2.8.4 The nearest fuel station entry is indicated 270m to the south comprising the Rochdale Road Service Station, the status is described as obsolete.

2.9 Environmentally Sensitive Areas

2.9.1 The Envirocheck database indicates that the site is located within a Nitrate Vulnerable Zones (NVZ) for surface water (River Irk Moston Brook to River Irwell). The site is not located within a Special Protection Areas (SPAs), Sites of Special Scientific Interest (SSSI) or area of adopted green belt.

2.10 Ecological Setting & Invasive Plant Species

2.10.1 There are no sites of Special Biological Interest (SBI), Special Areas of Conservation (SAC) or nature reserves at the site or within 250m of the site boundary.

2.10.2 No evidence of invasive plant species was noted during the course of the site walkover survey, although, it should be noted the inspection did not comprise a detailed ecological assessment.

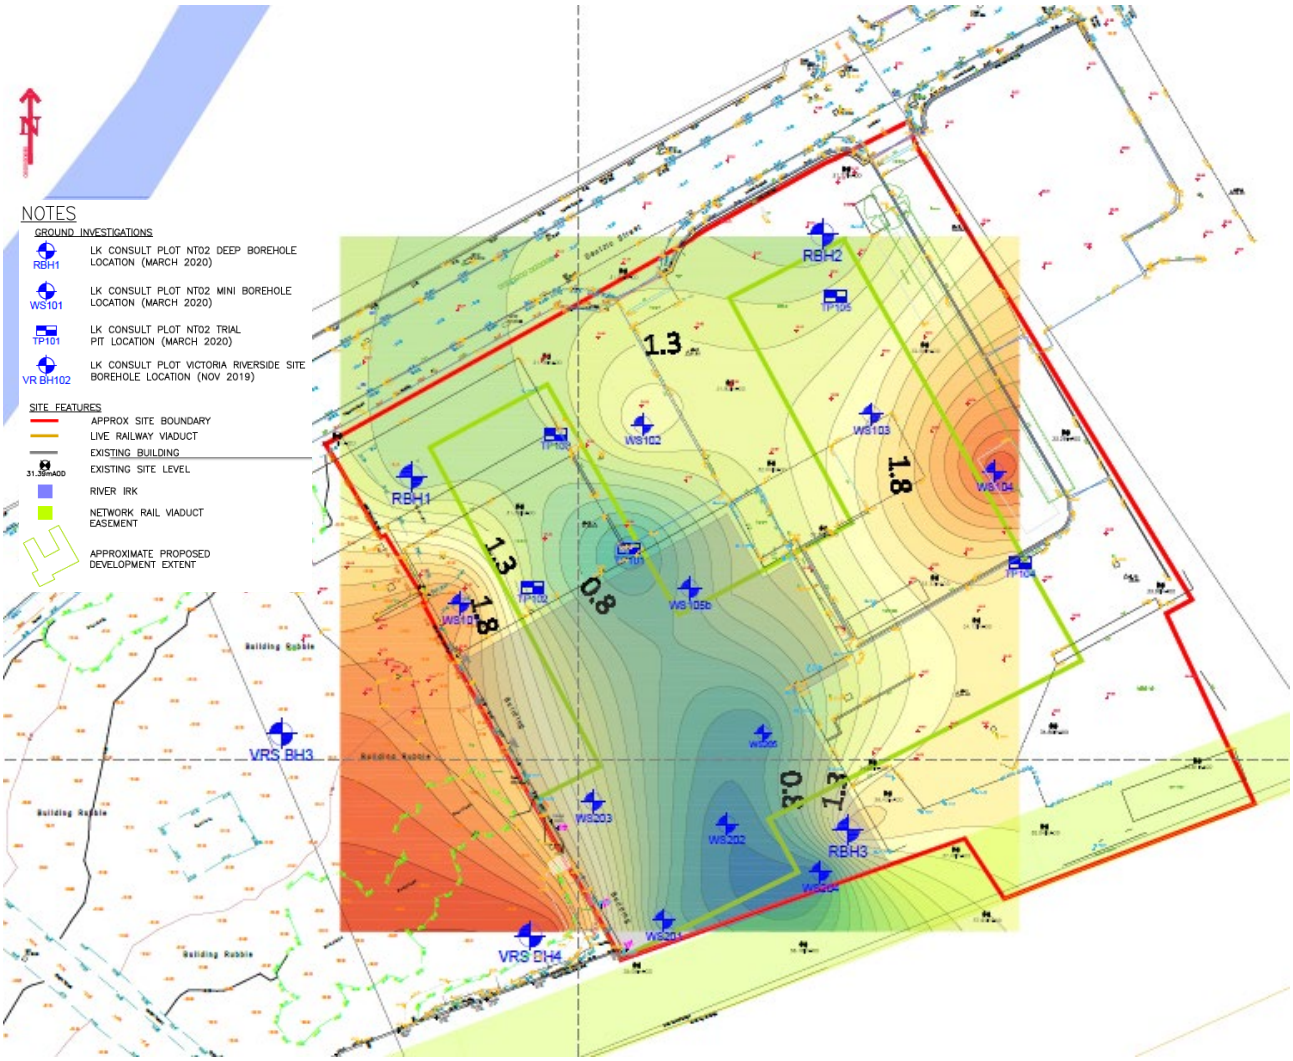

2.11 Unexploded Ordnance

2.11.1 The site is located within central Manchester and historical maps have recorded ruins and bomb strikes in the local area. A UXO Desk Study & Risk Assessment for the Northern Gateway development, including the site, has been produced by Zetica UXO Ltd (ref. P8135-18-R1), which gave the site area a low UXO hazard level. This level of risk does not correspond to a recommendation for pile clearance works. With regards to excavations the only recommendation is for general UXO awareness briefings to be given to site staff. We have contacted the report authors to confirm that these recommendations also apply to the subject site specifically, and this has been confirmed in our correspondence which is presented in Appendix E.

2.12 Previous Onsite Site Investigations

2.12.1 LK Consult undertook a Phase II Site Investigation across Plot NT02 in the western portion of the wider site. The intrusive works undertaken, and ground conditions encountered have been summarised above in section 2.4. A plan of the works undertaken, and encountered thickness of Made Ground, is presented overleaf in Figure 2.1. This section will provide a summary of the findings of the investigation from a Geo-environmental perspective.

Figure 2.1: Plot NT02 Previous SI Exploratory Hole Location Plan and Made Ground Contour Plot

2.12.2 Soil and groundwater samples were taken from exploratory hole locations and the installed monitoring wells. These were tested for a number of potential contaminants associated with historic activity known to have occurred on site and in the local area.

2.12.3 Results from chemical testing of samples indicated the following issues regarding contamination:

- Elevated levels of Heavy Metals (Lead) in soil at WS104, SP1 and SP2 (Likely associated with ash, clinker and coal noted within made ground deposits)
- Trace fragments of asbestos in soil at TP105 and SP1 (Likely associated with the demolition of historic buildings)
- Elevated levels of PAHs - Benzo(a)pyrene and Naphthalene in soil at WS102, WS103, WS105, TP103, TP105 SP1 and WS205 (Likely associated with ash, clinker and coal noted within made ground deposits)
- Elevated levels of TPH – Aliphatic C12-C16, Aromatic C8-C10 and Aromatic C10-C12 in soil at WS205 (beneath the light industrial building and likely associated with the numerous historic industrial activities in this area of the site)
- Elevated levels of VOCs/SVOCs – Benzene and Trichloroethene in made ground and superficial deposits at WS205, WS201, WS202 and WS204. PID readings in the southwest of the site also indicate the presence of volatile contamination with readings between 4.3ppm and 207ppm (Likely associated with the historic industrial activity in this area of the site); and
- Elevated concentrations of Vinyl chloride at RBH101 in water samples obtained from the bedrock aquifer and Trichloroethene in water samples obtained from the bedrock aquifer at RBH103 (attributed by the report either to industrial activity on site but more likely a results of the local areas heavy industrial past and more specifically the contamination associated with nearby historic gas works)

2.12.4 Ground gas monitoring visits were undertaken on a total of seven wells. Slightly elevated levels of carbon dioxide were encountered with an absence of methane, carbon monoxide and hydrogen sulphide gases. Slightly depleted levels of oxygen were also encountered. The site was characterised as a Characteristic Situation 1 with no remedial measures envisaged.

2.12.5 On site soil and groundwater contamination encountered is believed to relate to previous industrial operations as well as the potential movement of gas works era contamination within the underlying principal aquifer beneath the site. A defined area of contamination was suspected in the southern and western portion of the plot beneath the existing building.

2.12.6 The report recommended that an area of contaminated soils, in the southwest of NT02, should be excavated and either treated onsite or disposed of offsite. The use of a soil cover system was recommended in soft landscaping areas. Although exceedances of contaminants in groundwater were recorded, groundwater remediation was not recommended.

2.13 Nearby Previous Offsite Site Investigations

Land Adjacent to the West

2.13.1 Land adjacent to the west of the site is, at the time of writing, being developed with large residential buildings. As part of this development, a number of previous site investigations have been undertaken, the findings of which are summarised below.

2014 Desktop Study Report by Atkinson Peck (ref. NG/C17062)

2.13.2 The report largely corroborates and details the assessment of the plot as detailed in this assessment. The site was historically developed with an extensive rubber works and subsequent used as a carpark. Potential contamination was identified including solvents and other commonly occurring contaminants. Geology was identified as Devensian Till overlying sandstone bedrock.

2019 Phase 2 Environmental Investigation by LK Group (ref. CL-602-LKC 19 1267-02)

2.13.3 As part of this investigation 7 rotary boreholes were undertaken to depths of up to 10.50m, as well as 6 window sample boreholes and 12 trial pits. The investigation encountered Made Ground to depths of between 0.60m and 3.91m, underlain by sandstone, and recommended a piled foundation solution.

2.13.4 Soil sampling was undertaken across the site, focusing primarily on shallow soils. Groundwater sampling was not undertaken. Exceedances were encountered in the form of Lead and PAHs and a soil capping system was recommended in areas of soft landscaping.

Land Adjacent to the South

2.13.5 Records of ground investigations for Land adjacent to the south are not held on public available records. However, records are held of a Remediation Statement and subsequent Phase 1 Desk based assessments which refer to older site investigations.

2.13.6 From these and our own investigations it is clear that the site was developed as a large gas works in the 19th century. In the later 20th century, a depot and call centre building were present on site before the current use as a carpark.

2010 Remediation Statement by Entec UK Ltd for National Grid Property Holdings

2.13.7 The report discusses previous site investigations in the 1960s, 1990s, and early 2000s. These original reports cannot be located. However, it summarises their findings. Generally Made Ground was encountered across the site up to 9.5m in thickness, with visible tarry contamination. Details are limited on specific contaminants proven through testing, though there are references to elevated concentrations phenols, PAHs and general organic contamination.

2018 Phase 1 Geo-Environmental Report by e3p (ref. 12-922-R1)

2.13.8 The largely confirms the site history noted above and identifies a risk of contamination from the gas works including metals, PAHs and VOCs requiring intrusive investigation.

2020 Phase 1 Geo-environmental Report by Ecus

2.13.9 This report was undertaken as part of an Environmental Statement undertaken in 2020. The report discusses previous site investigations, as well as a verification report detailing remediation works undertaken following the 2010 remediation statement. The remediation works undertaken focused primarily on removing sources of contamination (such as structures and nearby soils), primarily owing to the potential risk to groundwater. The works primarily comprised excavation of tar tank, gas holder and ammonia plant structures and any related contaminated soils. Many areas were not remediated owing to their proximity to active National Grid gas infrastructure, including a further tar tank.

2.13.10 This report concluded by identifying risks to human health and groundwater from contamination including Metals, PAHs, TPH and VOCs. A full ground investigation of the site was recommended although there is no evidence that this was ever undertaken.

Land Adjacent to the North

2.13.11 No evidence of previous site investigations could be located for the land to the north of the site (across Dantzic Street).

3.0 Preliminary Conceptual Site Model

3.0.1 The results from the desk-based information review have been used to assess theoretical risks posed by ground contamination and ground stability issues beneath the site. The assessment considers these risks both in terms of the current site arrangement and usage, as well as any potential future development (and associated construction process).

3.0.2 The assessment has been collated with reference to various statutory and non-statutory guidance documents relating to land contamination and ground stability. Specifically, the assessment has been conducted in accordance with the Environment Agency Land Contamination Risk Management (LCRM) guidance relating to the "Tier 1 Preliminary Risk assessment" process (revised April 2021).

3.0.3 In accordance with this method, a Preliminary Conceptual Model has been collated for the site based on the results of the desktop review. This model is based around the Source / Pathway / Receptor methodology as outlined in Fig 3.0.

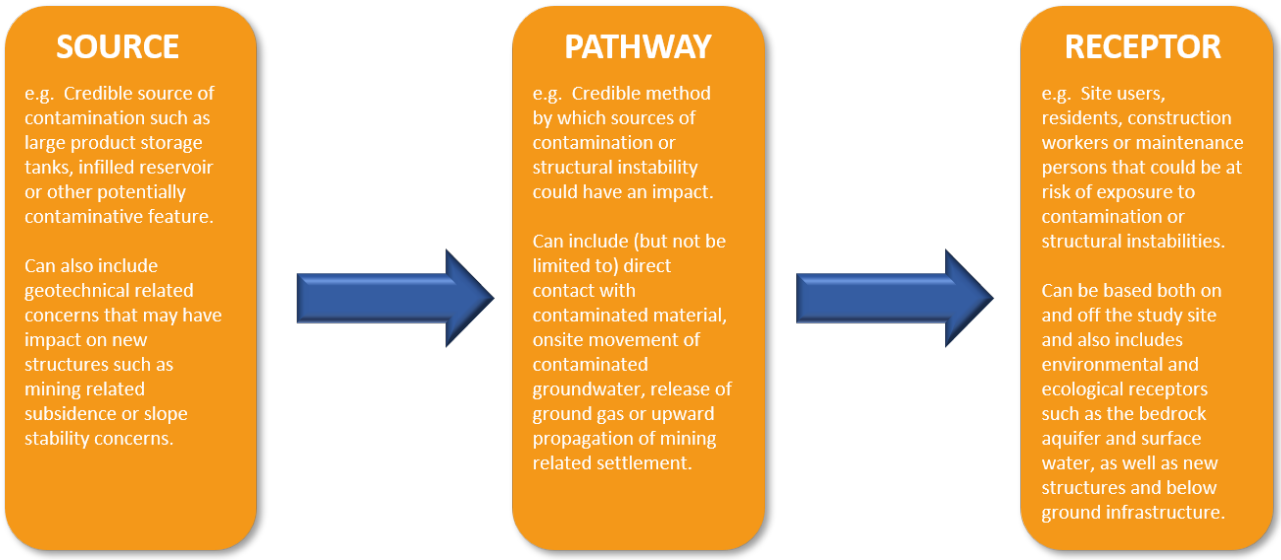

Figure 3.0 Source Pathway Receptor Diagram

3.0.4 Risk assessments is the process of collating known information on a hazard or set hazards in order to establish actual or potential risks to receptors. The receptor may be human health, controlled waters, a sensitive local ecosystem or even construction materials. Receptors can be connected with the hazard under consideration via one or several exposure pathways (e.g., the pathway of direct skin contact and oral exposure).

3.0.5 Risks are generally managed by isolating or removing the hazard, isolating the receptor, or by intercepting the exposure pathway. Without the three essential components of a source (hazard), pathway and receptor, there is deemed to be no risk. In other words, the mere presence of a hazard at a site does not mean that there will necessarily be risks.

3.0.6 Potential sources of contamination have been identified across the site, where applicable, based on observations and information obtained during the desktop review. These sources are defined based on either observation during historical map records or site recognisance (e.g., evidence of above ground fuel storage tanks or previous industrial operation); or by review of published environmental information on operations within or adjacent the site (e.g., historical landfill records, trade industry directory etc).

3.0.7 Where applicable, reference has been made to historical Department for the Environment Industry profiles and other information on industrial operations to better define the range of substances that may be present within soils beneath the site.

3.0.8 The risk assessment has been completed with reference to the guidance outlined within CIRIA 552 "Contaminated land risk assessment. A good practice guide". This risk assessment methodology considers the potential consequence / severity of risks that may be present within soils in comparison with the likelihood of exposure to or and occurrence of said risk. A range of risk classifications are provided within CIRIA 552 further details of which are provided in Table 3.0 below.

Table 3.0: Definition of risk class and consequence

Risk Class	Definition	Example
Minor	Potential for harm, although not significant, which may result in financial loss to resolve. Ground conditions where the use of PPE would readily mitigate risks posed to human health.	Low level contamination hotspots within made ground / demolition fill materials. Stunted or impeded plant growth due to poor soil quality.
Mild	Pollution of non-sensitive water resources or damage to crops, plant growth, below ground utilities or structures.	Perched groundwater contamination overlying low permeability aquifer or aggressive sulphate concentrations in soils.
Medium	Sources of contamination identified on site have the potential to cause both long and short-term health effects on site residents / users. Alternatively (or in conjunction with) sources of contamination may have the potential to impact surface or groundwater quality or impede vegetation growth.	Elevated concentrations of hydrocarbon contamination reported within topsoil tested within residential gardens as a result of inadequate or incomplete previous remediation works. Movement of contaminated groundwater from leaking below ground storage tank into adjacent surface water course.
Severe	Sources of contamination pose a credible and acute risk to human health with potential for "Significant Harm" occurring as defined by the Part IIA of the Environmental Protection Act (1990). Alternatively (or in conjunction with risks posed to human health) sources of contamination may pose an immediate risk to controlled water resources or ecosystems.	Grossly contaminated soils are encountered or disturbed during excavation works, causing an immediate release of toxic soil vapour and leachate / contaminated groundwater flow across adjacent land.

3.0.9 As previously discussed the contaminated land risk assessment model evaluates both, the severity of risks that may be present within soils / groundwaters in the context of threats posed to identified receptors before deriving the actual risk rating based on the probability of occurrence. Table 3.1 below outlines the range likelihood of risk.

Table 3.1: Probability Assessment

Classification	Definition
High likelihood	A credible pollutant linkage has been identified and it is very likely contaminants will impact identified receptors in both the short or long term (or is already actively doing so). The potential for harm to be caused is thus highly likely.
Likely	Pollutant linkages between the sources of contamination and identified receptors are present and it is considered likely they will become active given the right set of circumstances (e.g., contaminants currently buried below ground that are likely to be exposed or disturbed during construction / excavation works. The circumstances are such that an event is not inevitable, however it is possible in the short term and likely over the longer term.
Low likelihood	A theoretical pollutant linkage has been identified that has the potential to exposure receptors to contaminates under the correct circumstances. However, the likelihood of such an event occurring is not a certainty, even in the long term
Unlikely	There is no / minimal likelihood a pollutant linkage would occur, even over the long term.

3.0.10 The risk assessment process is a combination of probability and consequence, recognising that it may be possible to have a significant source of contamination beneath a site (such as a large below ground chemical storage tank) that may only present a relatively moderate to low risk (owing to the fact it may be contained within a secure concrete bund). Table 3.2 indicates how the actual nature of risk is established with Table 3.3 illustrating how the risk is interpreted in the context of contaminated land risk assessment.

Table 3.2: Risk Definition

		Consequence			
		Severe	**Medium**	**Mild**	**Minor**
Probability	High Likelihood	Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk
	Likely	High Risk	Moderate Risk	Moderate / Low Risk	Low Risk
	Low Likelihood	Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate / Low Risk	Low Risk	Very Low Risk	

Table 3.3: Description of risks posed

Risk Definition	Description
Very High	Active pollutant linkages between a significant source of contamination and identified receptors have been establish and there is a high likelihood of severe harm occurring to said receptors unless immediate investigation and remediation action is not taken.
High Risk	Harm is likely to arise to receptors from an identified hazard in the short and long term. Urgent investigation of the contaminant issue will be required, and remedial treatment is likely.
Moderate Risk	The possibility of harm has been identified toward receptors under the right circumstances, although the severity of harm would be relatively mild. Further investigation of identified issues would be prudent and possible need for remedial measures in the long term.
Low Risk	It is possible harm could arise to a designated receptor from identified hazard, but it is likely (if realised) any harm would be (at worst) mild.
Very Low Risk	No significant pollutant linkages have been identified and the possibly of harm occurring to receptors is low.

Potential Sources – Former Land Uses

3.0.11 Based on the current / historical uses of the site, and the surrounding area, the following potential sources of contamination / abnormal items have been identified:

- **NT02:**
  - The **Victoria Paint Works** was located just to the south of NT02, and crossing into the site somewhat, in the late 19th Century and early 20th Century, before being demolished to make way for the expansion of the railway viaduct
  - A **Smithy** was located in the north-western corner of NT02 from 19th Century to the 1950's
  - The **Victoria Screw & Bolt Works** covered much of NT02 from the 19th Century to 1950's. Post-war, this was operated as **Collyhurst Foundry** until demolition in the 1950's
  - Unspecified **tanks** were recorded in the northwest of NT02 in the post-war period until the 1950s. It is likely these are associated with the Collyhurst Foundry
  - From the late 19th Century to the 1960's a **Tripe Works** was located in the south of NT02 around a large chimney. This then becomes an **Asphalt Works** until being replaced by a depot in the 1980s.
  - The current Warehouse buildings in NT02 were constructed in the 1950's following the demolition of the Collyhurst Foundry in the 1950's. Between the 1960's and 1990's this had an extension to the northern boundary of NT02. Aerial photographs show another three-storey structure in the north of NT02 in the early 21st Century. Identified users of NT02 in this time are Astra Signs Ltd. and Farlam Waste Management, a skip hire company.
  - The previous site investigations encountered **TPH, metals and PAHs in soils**, and **chlorinated solvents in groundwater**

- **NT03:**
  - In NT03 there appears to have been small unlabelled works amidst the terraced housing, expanding until much of the plot had been covered by a **Scrap Metal Works** in 1970. This and another building are later labelled simply Works and it is feasible the use changed to another light industrial purpose
  - The scrap metal works appears to have been demolished in the 1990s and to have been operated from this time by the current site users, **Ryan Topsoil**, for earth storage
- **NT04:**
  - The **Dalton Printing Works** (later just Works) was present in the south of NT04, on the current raised plateau, from the 19th century until demolition between 2005 and 2009

Potential Sources – Potential Contaminants

3.0.12 We have considered the likelihood of various commonly occurring contaminants being present on the site. This assessment is based on our experience, understanding of the former site activities and published resources on industrial practices. These include Industry Profiles published by the Department of The Environment in 1995, which contain detailed technical details of historic industrial processes. In many cases, these compounds can serve as indicators for contamination by other compounds which have not been specifically tested for – for example, testing for many metal elements will also identify more complex metal compounds, and rarer PAHs are usually found alongside more commonly occurring ones. We have also considered the feasibility of rarer contaminants outside of these categories being present. It is rare that the full range of processes at a specific land use can be precisely determined from available records – for example, those used at a Chemical Works are theoretically infinite. Consequently, a higher burden of evidence must be required before testing for compounds which not typically assessed in the contaminated land industry.

	NT02	NT03	NT04
Metals	Metal specific works suggest higher than normal risk. Exceedances in previous site investigation.	Metal specific works suggest higher than normal risk.	Typical diffuse risks from former buildings and light industry
PAHs	Typical diffuse risks from former buildings and light industry. Exceedances in previous site investigation.	Typical diffuse risks from former buildings and light industry	Typical diffuse risks from former buildings and light industry
TPH	Typical diffuse risks from former buildings and light industry. Exceedances in previous site investigation in vicinity of historic tanks in northwest of site.	Typical diffuse risks from former buildings and light industry	Typical diffuse risks from former buildings and light industry

Asbestos	Typical diffuse risks from former buildings and light industry	Typical diffuse risks from former buildings and light industry	Typical diffuse risks from former buildings and light industry
Volatile Organic Compounds (VOCs)	Typical diffuse risks from former buildings and light industry	Typical diffuse risks from former buildings and light industry	Typical diffuse risks from former buildings and light industry
Chlorinated Solvents	Identified in groundwater in previous site investigation. See below.	No specific potential sources found. Potential to have spread into groundwater from NT02	No specific potential sources found
PCBs (Polychlorinated biphenyls)	No specific potential sources noted (e.g. substations)	No specific potential sources noted (e.g. substations)	No specific potential sources noted (e.g. substations)
PFAs (Per- and polyfluoroalkyl substances)	No specific potential sources noted (e.g. firefighting foam or non-stick coatings). Screws and bolts are sometimes made from PFAs, however, the onsite bolt works pre-date their development	No specific potential sources noted (e.g. firefighting foam or non-stick coatings)	No specific potential sources noted (e.g. firefighting foam or non-stick coatings)
Others	No further compounds considered likely, which would not be accounted for in the above testing.	No further compounds considered likely, which would not be accounted for in the above testing.	No further compounds considered likely, which would not be accounted for in the above testing.

Potential Sources – Chlorinated Solvents

3.0.13 The previous site investigation of NT02 identified exceedances of Vinyl chloride in groundwater at RBH101 and Trichloroethene in groundwater at RBH103. A number of potential sources for this contamination have been considered.

3.0.14 Chlorinated solvents, such as Trichloroethene (also called Trichloroethylene) and Vinyl Chloride are relatively commonly occurring and remediated contaminants in the UK, particularly in groundwater. They are a category of Volatile Organic Compound containing Chlorine. Typically, Trichloroethene degrades sequentially in the environment to Dichloroethene and Vinyl Chloride, themselves also harmful halocarbons. This is by a type of bacteria called Dehaloccoides in specific conditions: typically, anaerobic with low to medium pH.

3.0.15 Chlorinated solvents were first widely produced in the 1920s. They must usually be produced intentionally rather than as byproducts of other industrial processes. As they can effectively dissolve a large variety of organic compounds, chlorinated solvents have a wide variety of potential applications. Trichloroethene was extensively used as a dry-cleaning fluid as well as in the chemicals industry. It was also employed as an anaesthetic and a painkiller. It was most widely used as a degreasing agent for metal components.

3.0.16 There have been onsite land uses which could potentially have used chlorinated solvents. In particular they might have been used as degreasing agents at **Victoria Screw & Bolt Works / Collyhurst Foundry.** The smithy in NT02 and Scrap Works at NT03 are also potential sources although those works were of a smaller scale. If these compounds were used in significant quantities, it is likely they would have been stored onsite, although below ground storage is considered to be unlikely.

3.0.17 The feasibility of this contamination migrating to the site from an offsite source has also been considered. While other uses of chlorinated solvents are highly specific, degreasers have a wider variety of applications across a number of industrial land uses, and the local area has an extensive history of industrial development, not all of which will be documented. Drawing upon our assessment of the offsite history, as well as the nearby offsite site investigation reports we have assessed, the likelihood of these originating from offsite sources is assessed in the table below. The assessment has focused on the closest and most intensive recorded historical offsite industrial land uses.

Land Use	Distance	Likelihood of chlorinated solvent use	Likelihood of affecting the site
Railway viaduct	Adjacent to south	Low – low intensity industrial land use	Very low, less feasible than onsite hypothesis
Rubber Works / Parker Street Mills	5 – 70m west	Moderate – chlorinated solvents were used to clean rubber works machinery and are listed as an associated contaminant by the relevant DOE profile. The previous site investigation did not test for relevant compounds (VOCs) and did not undertake testing of groundwater. Architectural plans of the rubber works do not indicate the presence of a tank, although this is not unusual. Site development underway and may have resulted in betterment. If further sources of contamination are identified during construction this should be highlighted through validation process.	Moderate – adjacent to site, spread through groundwater would be perpendicular to hydraulic gradient
Gas Works	10m north	Low – chlorinated solvents are not a core part of gas works operation and would be limited to cleaning operations. Their presence is not indicated by the relevant DOE profile.	Low – limited evidence of presence and spread to site would be against hydraulic gradient
Gas Works	50m south	Low – chlorinated solvents are not a core part of gas works operation and would be limited to cleaning operations. Site has been subject to limited remediation. Their presence is not indicated or suggested by previous site investigations or the relevant DOE profile.	Low – feasible pathway but limited evidence of presence
Gas Works / Chemical Works / Print Works	65 -100m northwest	Moderate – chemical works is associated with a broad range of contaminants	Low – distance from site and spread to site would be against hydraulic gradient

Chemical Works / / Button Manufactory / Metal Foundry / Timber Yard / Engineering Wrks / Scrap Works	100 – 200m west	Moderate – chemical works is associated with a broad range of contaminants	Low – distance from site and spread to site would be against hydraulic gradient
Union Bridge Iron Works / Chemical Works / Oil Works	160 – 220m west	Moderate – chemical works is associated with a broad range of contaminants	Low – distance from site and spread to site would be against hydraulic gradient
Dye Works	180m northeast	Moderate – dye works is associated with a broad range of contaminants and chlorinated solvents are listed as an associated contaminant by the relevant DOE profile	Low – distance from site and spread to site would be against hydraulic gradient
Gas Works	200m northeast	Low – chlorinated solvents are not a core part of gas works operation and would be limited to cleaning operations.	Very low – limited evidence of presence, distance from site and spread to site would be against hydraulic gradient
Potentially unrecorded landuses	N/A	Moderate – relatively widely used compound in mid to late 20th Century	Difficult to attribute contamination to this source in the absence of positive evidence

3.0.18 Consequently, the mostly likely source of any chlorinated solvent contamination is considered to be either onsite or from the historic adjacent rubber works. Attribution of chlorinated solvent contamination to the adjacent rubber works would require a comprehensive ground investigation to prove the absence of an onsite source, and detailed mapping of any contamination indicating the largest part of the plume to be beyond the site boundary. The construction process at the adjacent site may also highlight further evidence of contamination.

Potential Pathways and Receptors

3.0.19 The following potential pathways and receptors have been identified for the above potential sources of contamination:

- End users of the site (future site users) could be at risk of exposure to contaminated soils / materials at the site via ingestion, direct contact and inhalation of contaminated dust / vapours / hazardous gas
- Construction persons could also be at risk of exposure to contaminated soils via ingestion, direct contact and inhalation of contaminated dust / vapours / hazardous gas
- Leaching of potential contaminants into the Principal Aquifer beneath the site or nearby River Irk
- Offsite migration of contaminants and ground gas toward surrounding developments

- On site migration of potential contaminants from nearby historic gas works, garage / depot and railway
- Below ground structures such as concrete foundations or water supply pipe work could be at risk of chemical attack, damage and contamination as a result of aggressive ground conditions
- Plant uptake of phytotoxic chemicals (Elevated zinc and copper identified in LK Consult Site Investigation Report)

3.0.20 Table 3.4 (provided overleaf) assess and summarise the pollutant linkages that may exist at the site; the assessment has assumed that the site is to be redeveloped for a residential development without gardens. A series of conceptual site cross sections have also been completed to visually depict the risks to the site along with a plan detailing their location and are contained within Appendix A (ref: 4328-ROC-XX-XX-SK-ES-ESK103-106).

Table 3.4		Preliminary Conceptual Site Model					
Source		Pathway	Receptor	Severity	Probability	Risk definition	Comments
On Site	Elevated Levels of Contaminants Encountered During Past Site Investigation on Plot NT02 (Metals, PAHs, TPH, ACMs, VOCs & Chlorinated Solvents)	Dermal contact and / or ingestion; inhalation of vapours / dusts	Current Site Users	Medium	Unlikely	Very Low	The site is currently vacant, and the majority of accessible areas are covered with buildings and hardstanding. There is a very low risk of a viable contaminant pathway to current human health receptors.
			Construction workers	Medium	Likely	Moderate	Construction persons are considered to be at the greatest risk of exposure to contaminants during the site's redevelopment. Additionally, the presence of as yet, unreported sources of contamination cannot be precluded*
			Future Site Users	Medium	Likely	Moderate	The site is to be developed to comprise a high-rise residential development with associated areas of soft landscaping and it is considered future site users are at risk of exposure to sources of contamination as outlined above particularly within areas of soft landscaping. Volatile contaminants, if present, are less inhibited by site surfacing.
			Ecological [Plant Uptake]	Mild	Likely	Low to Moderate	Elevated levels of phytotoxic metals were encountered during the previous site investigation works. There is a potentially meaningful risk to plant growth in proposed area of soft landscaping.
		Below ground service runs / infrastructure	Below ground infrastructure & construction	Medium	Likely	Moderate	The desk-based assessment has identified credible sources of contamination within the site and it is possible chemically aggressive ground conditions may be present as a result. The precise nature of risks should be confirmed via intrusive site investigation works.
	Historical Contaminative feature(s) (Collyhurst Foundry, Dalton Print Works, Rubber Works, Scrap Metal Yard, Asphalt Works, Tanks, Paint Works Made Ground Including onsite Mounds	Dermal contact and / or ingestion; inhalation of vapours / dusts	Current Site Users	Medium	Unlikely	Very Low	The site is currently vacant and the majority of accessible areas are covered with buildings and hardstanding. There is a very low risk of a viable contaminant pathway to current human health receptors.
			Construction workers	Medium	Likely	Moderate	Construction persons are considered to be at the greatest risk of exposure to contaminants during the site's redevelopment. Additionally the presence of as yet, unreported sources of contamination cannot be precluded*
			Future Site Users	Medium	Likely	Moderate	The site is to be developed to comprise a high-rise residential development with associated areas of soft landscaping and it is considered future site users are at risk of exposure to sources of contamination as outlined above particularly within areas of soft landscaping. Volatile contaminants, if present, are less inhibited by site surfacing.

Table 3.4		Preliminary Conceptual Site Model					
Source		Pathway	Receptor	Severity	Probability	Risk definition	Comments
	(Metals, PAHs, TPH, ACMs, VOCs & Chlorinated Solvents)		Ecological [Plant Uptake]	Mild	Likely	Low to Moderate	Elevated levels of phytotoxic metals were encountered during the previous site investigation works. There is a potentially meaningful risk to plant growth in proposed area of soft landscaping.
		Below ground service runs	Below ground infrastructure & construction	Medium	Likely	Moderate	The desk-based assessment has identified credible sources of contamination within the site and it is possible chemically aggressive ground conditions may be present as a result. The precise nature of risks should be confirmed via intrusive site investigation works.
	Ground Gas Generation Associated with Made Ground Deposits	Migration / Accumulation	Current Site Users	Minor	Unlikely	Very Low	Non-negligible potential sources of ground gas have been identified in the form of Made Ground and previous site investigations have identified elevated concentrations of ground gases, although without meaningful flow. There are potential pathways through potentially permeable Made Ground deposits. The site is currently unoccupied which limits the potential for current site users to be affected.
			Construction workers	Medium	Low likelihood	Moderate to low	Non-negligible potential sources of ground gas have been identified in the form of Made Ground and previous site investigations have identified elevated concentrations of ground gases, although without meaningful flow. There are potential pathways through potentially permeable Made Ground deposits. Construction persons may have greater exposure to ground gas risks when working in confined spaces.
			Future Site Users	Medium	Low likelihood	Moderate to low	Non-negligible potential sources of ground gas have been identified in the form of Made Ground and previous site investigations have identified elevated concentrations of ground gases, although without meaningful flow. There are potential pathways through potentially permeable Made Ground deposits. New occupied building structures will present ne pathways and receptors for ground gas accumulation.
	Leaching of Contaminants from	Leaching of Contaminated	Controlled Waters: Aquifer	Medium	Likely	Moderate	Meaningful potential sources of contamination have been identified and exceedances of volatile compounds (Vinyl Chloride and

Table 3.4		Preliminary Conceptual Site Model					
Source		Pathway	Receptor	Severity	Probability	Risk definition	Comments
	Historic Industry on Site and in the Local Area	Soil & Impact on Controlled Waters					trichloroethene) have been identified in groundwater in the previous site investigation. Potential offsite sources are also present. Bedrock beneath the site is designated as a Principal aquifer and should be considered a sensitive receptor. It is feasible for near surface contamination sources to affect onsite groundwater through seasonal groundwater changes, surface water infiltration, leaching and percolation. The local geology is likely permeable with minimal impermeable soils present above the aquifer. It is also feasible for offsite sources to affect onsite groundwater, or for onsite groundwater to affect the River Irk, which is likely in continuity with local groundwater.
			Controlled Waters: Surface Water	Medium	Unlikely	Low	Meaningful potential sources of contamination have been identified and exceedances of volatile compounds (Vinyl Chloride and trichloroethene) have been identified in groundwater in the previous site investigation. Potential offsite sources are also present. The River Irk is located nearby. While this River is currently of low quality (GQA Grade of "E," Poor), it is a significant watercourse and local planning ambitions are for it to be improved. The River Irk is located downgradient from the site. The identified sources and primarily below ground and the site is and will be covered with large areas of hardstanding, limiting the potential for near surface run off to affect the watercourse. However, there is meaningful potential for groundwater to be affected by contamination and it is likely that local groundwater is in hydraulic continuity with the River Irk.

Add note re: Severe (gas) rating due to risk to human health (asphyxiation), proposed development (explosion).
** It is considered the risks posed to construction personnel, by sources of contamination, can be adequately mitigated against via the use of full PPE and the adoption of good hygiene and site practices. As required, any suspected sources of contamination discovered during the site's development should be brought to the immediate attention of RoC Consulting to enable the implications to be established and appropriate remedial recommendations made. In the event of such a discovery the scope and findings of the current assessment will require re-assessment and revision.*

4.0 Conclusions & Recommendations

4.0.1 The desk-based assessment has identified the following:

- The site is likely underlain by Made Ground deposits, with small thicknesses of superficial deposits and relatively shallow bedrock. Intrusive investigation of ground conditions will be required to inform geotechnical design
- The site has had an industrial history from the late 1800s with past site uses including print works, paint works, the Collyhurst Foundry, rubber works, scrap metal works, asphalt works a nut and bolt works and numerous other forms of industry that have a contaminative potential. The local area has also had a heavy industrial past with nearby land uses including gas works, iron works, garages and depots, chemical works and railways / railway sidings
- A previous programme of site investigation works on Plot NT02 completed by LK Consult identified potential contamination in this location and recommended remedial measures. There is currently evidence to support these recommendations. However, it is recommended that they are reassessed in the context of the entire site following a subsequent site investigation
- Further investigation of potential contaminants via intrusive investigation is required in order to provide a detailed risk assessment of the risks posed by the identified sources of contamination to receptors (particularly human health and controlled waters)
- There is a significant area of the site occupied by a topsoil stockpile (most of Plot NT03) which will require removal to facilitate the development. Located adjacent this stockpile is an embankment which use to accommodate a signal box associated with the adjacent railway. It is currently unknown whether this embankment provides support to the adjacent railway viaduct or if there is a separate structure supporting the viaduct obscured by the embankment. Further investigation as well as consultation with Network Rail is proposed to ascertain how structural support is provided to the viaduct in this area and any potential constraints that may be presented to the proposed development in either eventuality
- Given the extensive past development of the site, it is highly likely that relic foundations and potentially basements will be encountered in future works

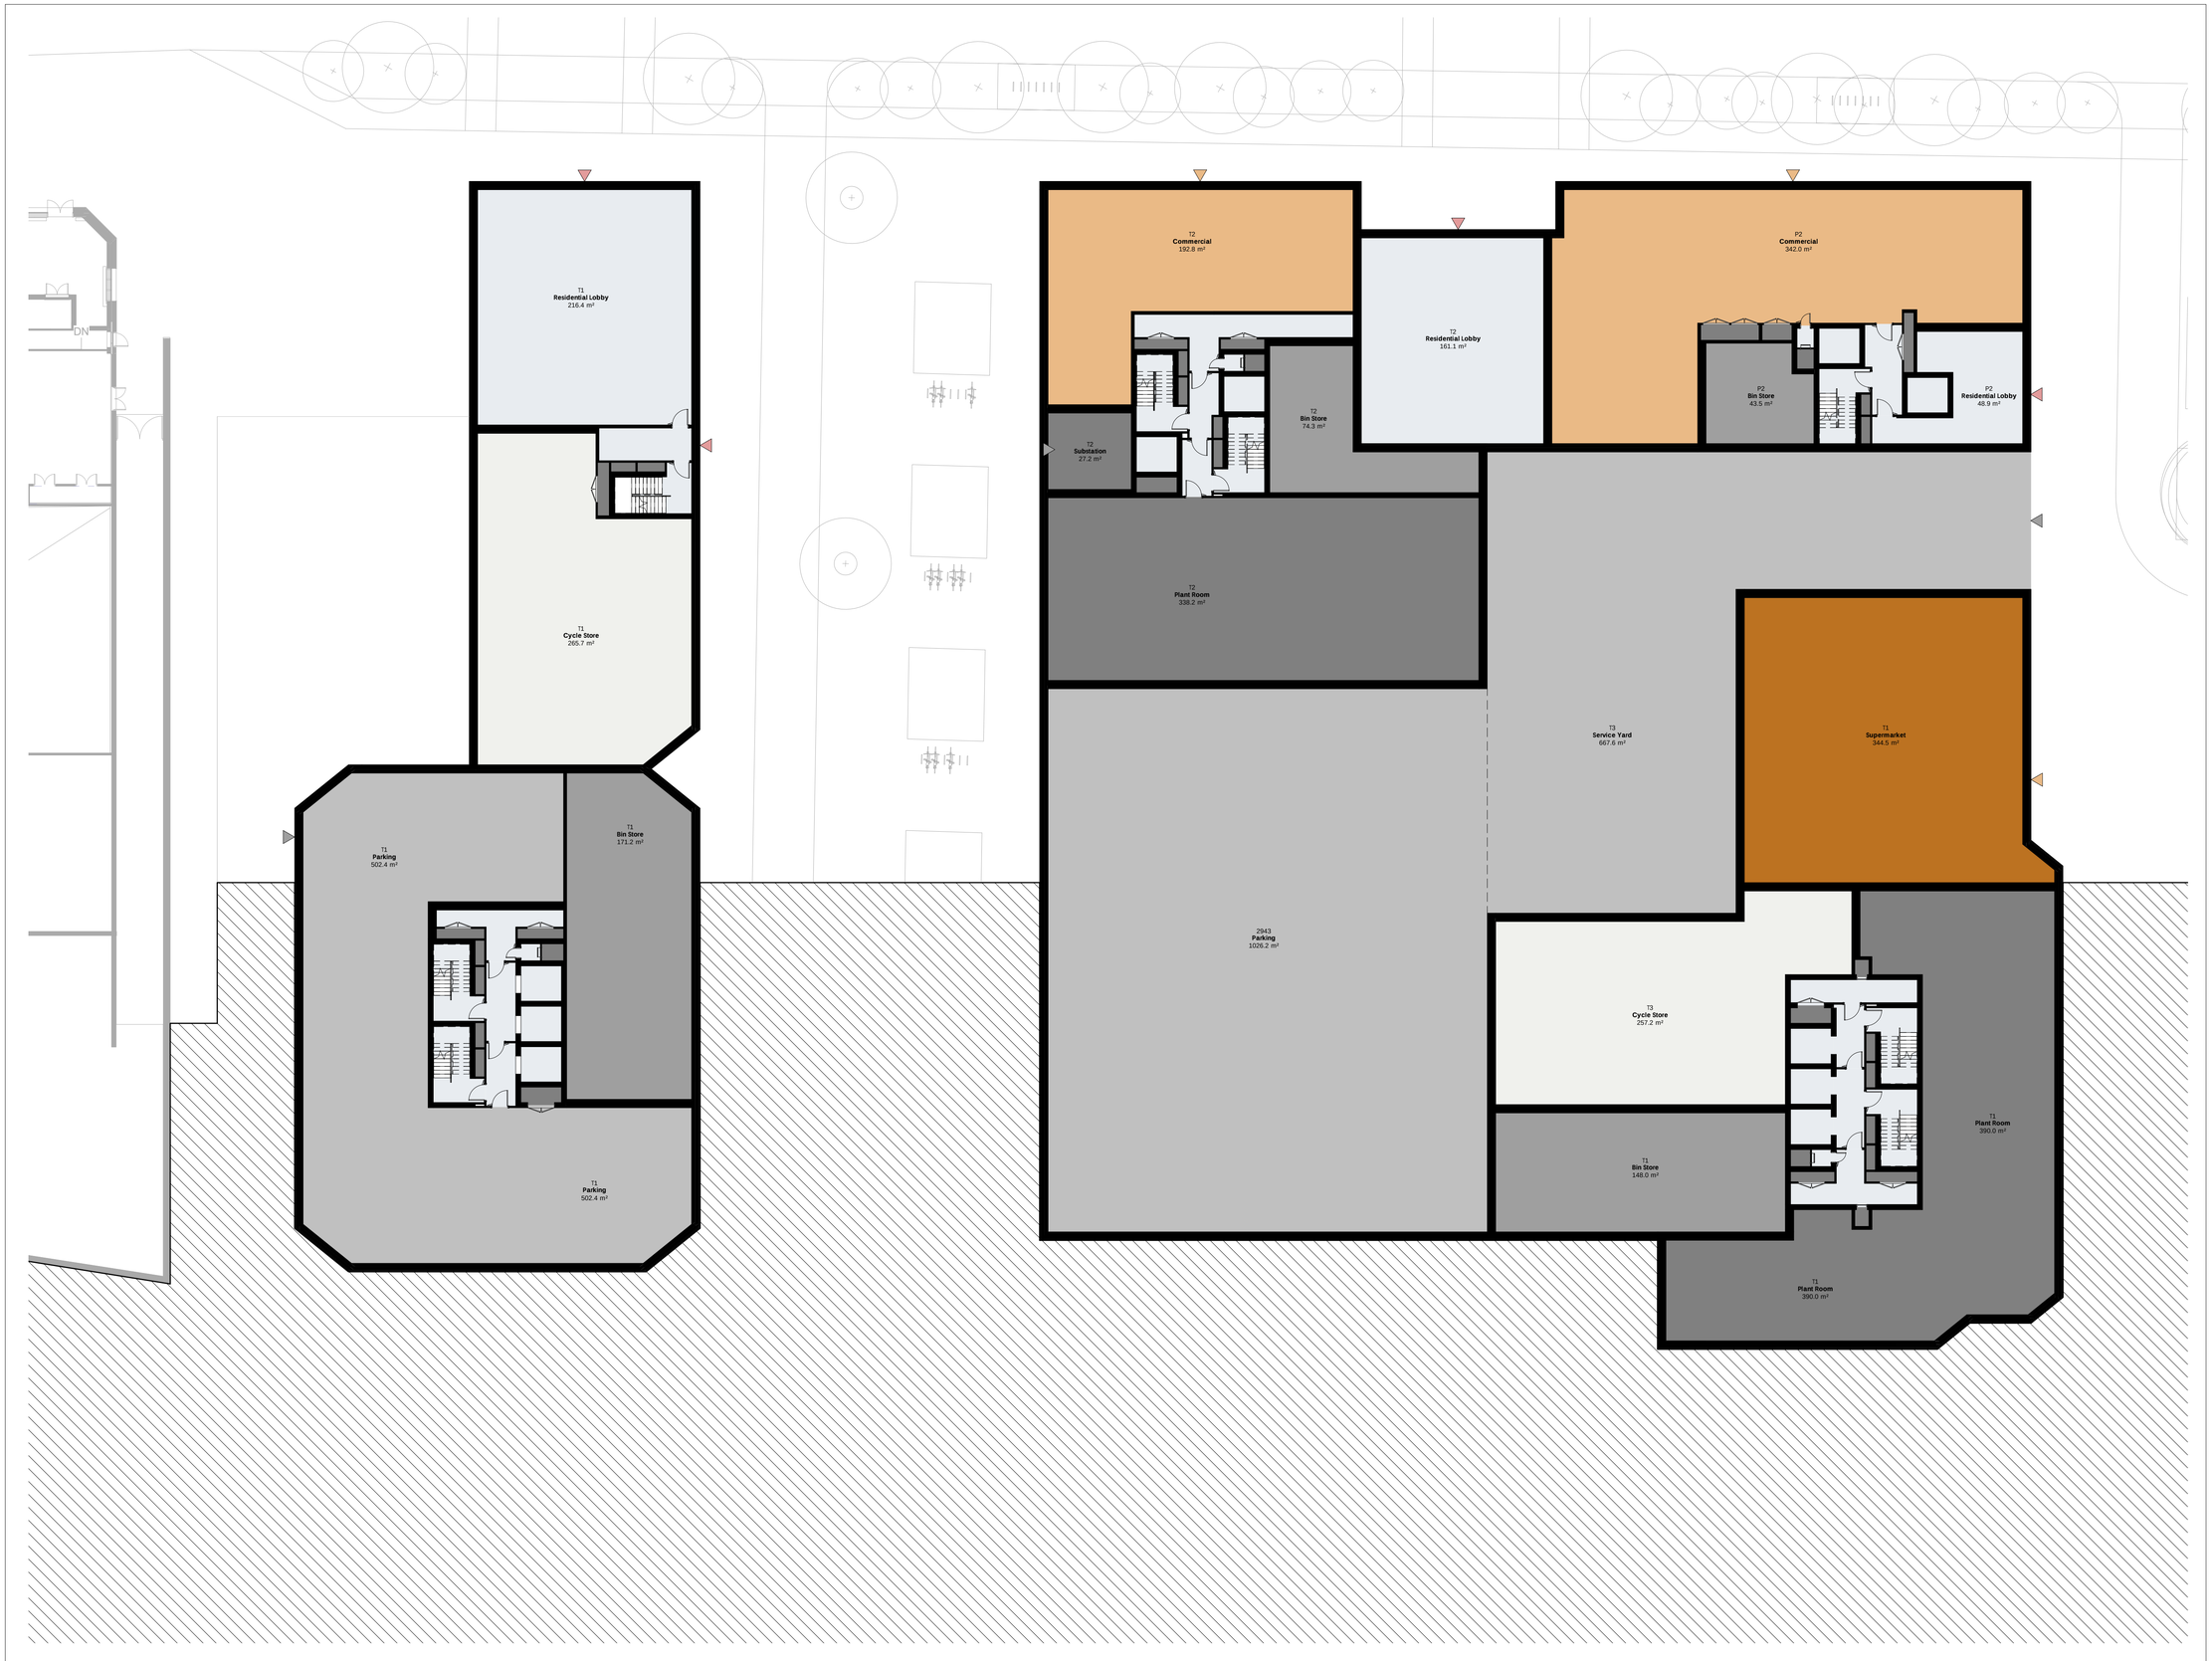

4.0.2 With reference to the above it is noted the site has the potential to impact on identified receptors, both during the construction process and as part of its subsequent operation as a high-rise residential development with areas of soft landscaping.

4.0.3 As such it is recommended that a programme of site investigation works be completed to further investigate the quality and composition of site soils with respect to risks posed by sources of contamination and ground gas ingress. Consideration should also be given to establishing the foundation design parameters and sufficient geotechnical information to support new building design.

5.0 Site Investigation Design

5.0.1 A design of Phase 2 Intrusive Site Investigation works has been completed with reference to the findings of the Phase 1 Desktop Study; the main objectives of these works are to establish site wide ground conditions to support new building foundation and road design, as well as identify and delineate any sources of contamination that may be present on site. We refer you to the separately issued investigation proposal, (ref. LR/RC/4328/FM/TN/P2-200422).

Lancashire And Furness

Published 1848

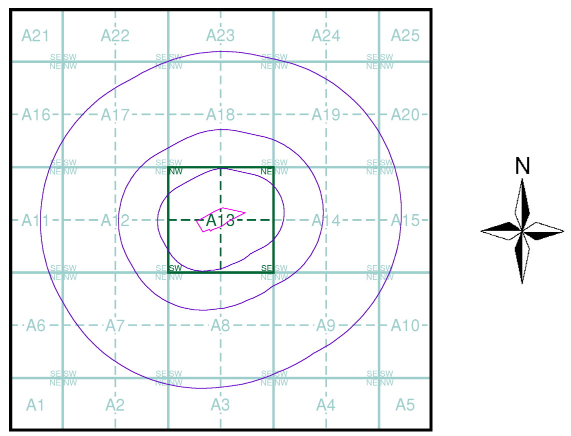

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

RoC CONSULTING

Manchester

Published 1975

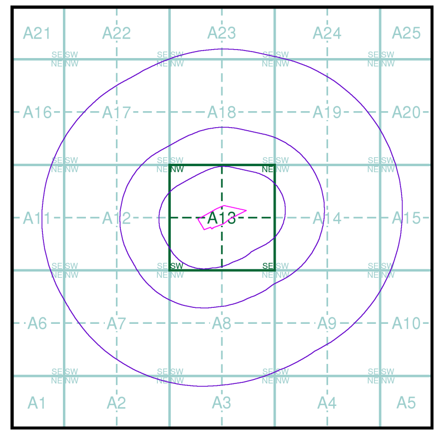

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

Ordnance Survey Plan

Published 1980 - 1986

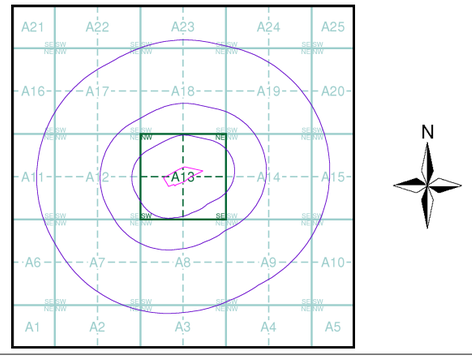

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

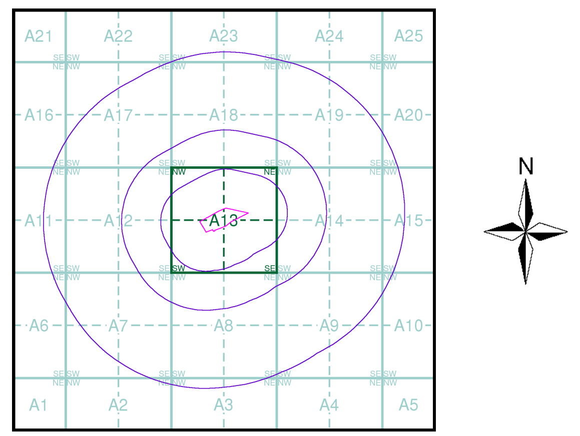

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

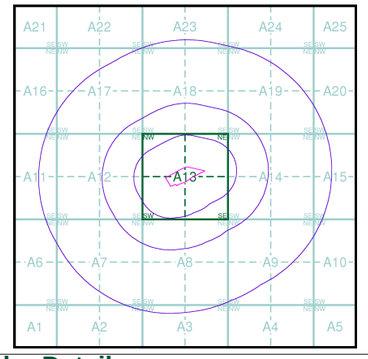

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

ROC CONSULTING

Lancashire And Furness

Published 1850

Source map scale - 1:1,056

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

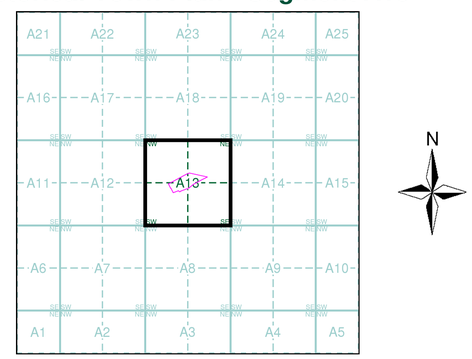

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1891

Source map scale - 1:500

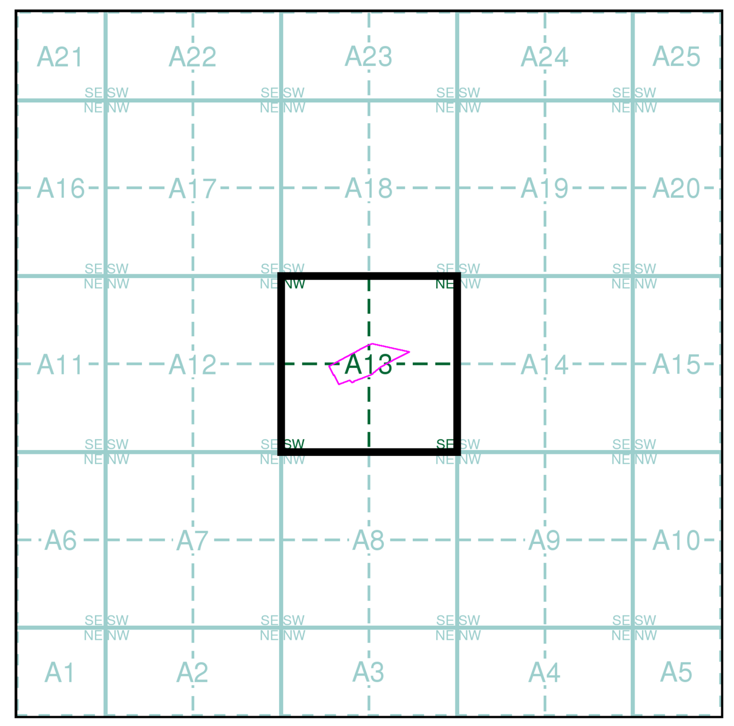

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Ordnance Survey Plan

Published 1953 - 1954

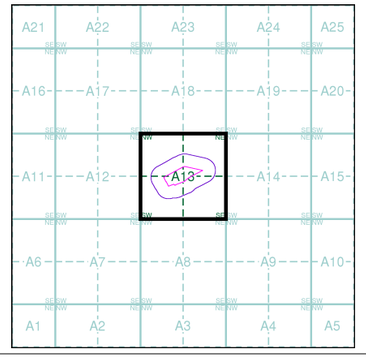

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1973

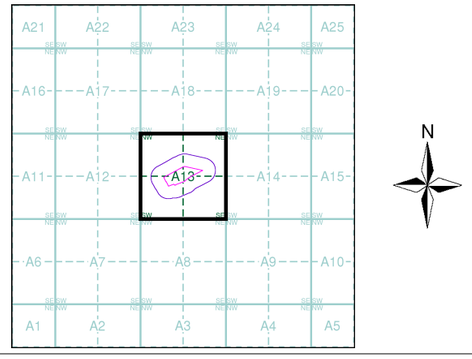

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a `work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1992

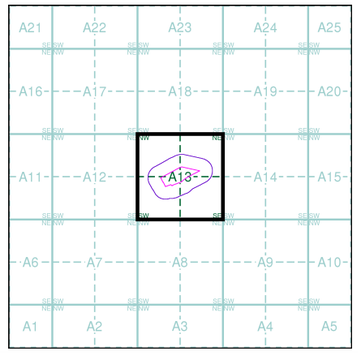

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.
The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

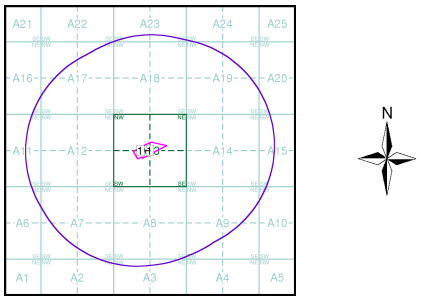

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

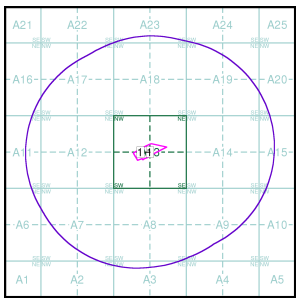

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

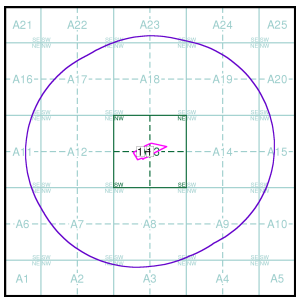

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

APPENDIX E – UNEXPLODED ORDNANCE CORRESPONDENCE

Reece McGuinness

From: Stefan Lang <stefan.lang@zetica.com>
Sent: 29 March 2022 13:28
To: Linden Richardson
Cc: Mike Newman
Subject: RE: 4328: UXO Report P8135-18-R1

Afternoon Linden

Thanks for sending this through. In-line responses below.

To reiterate from our call, the bombing records for Manchester are particularly good and we have used several sources of information to confirm the low UXO hazard level across your site, an assessment we remain confident in.

Kind regards

Stefan

Stefan Lang
UXO Manager
Zetica Limited

Sent: 29 March 2022 13:04
To: Stefan Lang <stefan.lang@zetica.com>
Cc: Mike Newman <mike.newman@rocconsulting.com>
Subject: 4328: UXO Report P8135-18-R1

Afternoon Stefan, good to talk a moment ago.

Just writing to confirm the recommendations of the report as discussed. The location of our site is as marked in dark purple on the attached drawing, in the area you have marked as Low risk.

Can you quickly confirm the following:

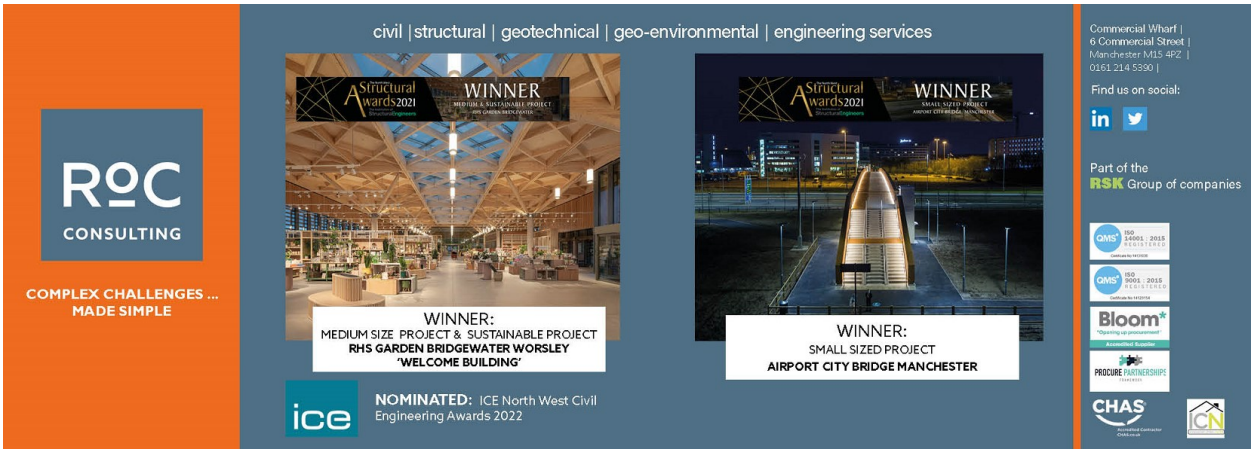

- The low risk classification still applies for our specific plot Correct.
- You don't recommend any further reports for the specific plot We don't.
- You don't recommend supervision or clearance of our SI investigation work We don't.
- You don't recommend pile clearance or other UXO work be undertaken for the construction phase We don't.
- Generally your only recommendation for this plot is for UXO awareness briefings for constructions staff Correct.

Many thanks again for helping on this.

Regards

Linden Richardson
