

Excavation of exploratory trench (4.5m deep) at 102, 104 Waterloo Road, Manchester 24th to 27th July 2023

Pic 1. View
from South
Western
end of
trench

Pic 2. View of north eastern end of trench. This indicates a 10" diameter pipe that may be the end of the culvert at a depth of 900mm. However, despite the heavy rain of the preceeding weekend, there was no flowing water through this whatsoever.

Pic 3. Evidence of former basement bay windows of Victorian terrace that used to occupy the site.

Pic 4. Similar angle to pic 2. Possible culvert just visible appears to clip corner of existing building.

Approx. line of trench/ suspected culvert superimposed on proposed plan.
