

Condition 18 – EV Charging Point

The EV charging point is to be sited just inside the building near to main roller shutter access / egress door opening. There is no suitable external location for the EV charging point given the confines of the site. The associated cabling would obstruct users of the highway on Ridings Street if placed outside.

The proposed location for the EV charging point is clearly shown below on the extract taken from the approved floor / site plan drawing REF. GDA/01B.
