15th May 2023

Dear Councillors,

**PRECONSULTATION – PROPOSED RADIO BASE STATION INSTALLATION AT MAN26959
FOOTWAY AT KIRKMANSHULME LANE, BELLE VUE, GORTON, MANCHESTER, M12 4WB NGR
E:387286 N:395964**

CEP Telecoms Ltd act on behalf of the mobile telecommunications operator CK Hutchison Networks (UK) Ltd. The proposal is to install a radio base station, in order to provide the latest 3G, 4G and new 5G technologies to the Belle Vue area.

The purpose of this letter is to consult with you and seek your views on our proposal before any planning submission is made. We understand that you are not always able to provide site specific comments, however, CK Hutchison Networks (UK) Ltd are committed to consultation with communities on our mobile telecommunications proposals and as such would encourage you to respond.

As part of CK Hutchison Networks (UK) Ltd continued network improvement program, there is a specific requirement for an installation at the footway of Belle Vue to ensure that the latest high quality 3G and 4G service provision is provided in this area of Gorton. The proposed column will also ensure that new 5G coverage can also be provided at this location. This ensures that coverage and capacity requirements are maintained.

Mobile telecoms networks are now ubiquitous throughout the UK. It is an expectation that an individual can connect and use their mobile phone whenever and wherever they are. With the advent of new technology, under the banner of 5G, further advances are proposed and Central Government has seen the telecoms industry, and in particular 5G, to be at the forefront of economic development.

This site will enable 5G coverage to be provided to this area of Belle Vue. The Government recognises that widespread coverage of mobile connectivity is essential for people and businesses. That is why the Government is committed to extending mobile geographical coverage further across the UK, with

CEP Telecoms Ltd, 1a Station Court, Station Road, Guiseley, LS20 8EY
www.ceptelecoms.com

continuous mobile connectivity provided to all major roads and to being a world leader in 5G. This will allow everyone in the country to benefit from the economic advantages of widespread mobile coverage.

As well as improved mobile signal, 5G networks are also crucial to drive productivity and growth across the sectors that local areas are focusing on through their emerging Local Industrial Strategies. Enabling and planning for 5G implementation is central to achieving the Government's objective to deliver prosperity at the local level and enable all places to share in the proceeds of growth.

5G service provision will bring faster, more responsive and reliable connections than ever before. More than any previous generation of mobile networks, it has the potential to improve the way people live, work and travel, and to deliver significant benefits to the economy and industry through the ability to connect more devices to the Internet at the same time, the 'Internet of Things'. This will enable communities to manage traffic flow and control energy usage, monitor patient health remotely, and increase productivity for business and farmers, all through the real-time management of data.

The demand for mobile data in the UK is increasing rapidly, and as households and businesses become increasingly reliant on mobile connectivity, the infrastructure must be in place to ensure supply does not become a constraint on future demand.

The radio base station will also meet the extra demands on the network in this area as more people use internet enabled handheld devices. It is a densification project for the operator's network to fill holes in service provision including coverage and capacity. This will enable the operator's customers to be able to use their handheld devices without calls being dropped or buffering occurring where there is a gap in the operator's network coverage and capacity ability. A site in this location will fill the gap in service provision and provide high quality, reliable, advanced 3G, 4G and 5G to this urban area of Belle Vue.

The preferred CK Hutchison Networks (UK) Ltd option is as follows:

MAN26959 FOOTWAY AT KIRKMANSULME LANE, BELLE VUE, GORTON, MANCHESTER, M12 4WB

The proposal relates to the installation of a 20m phase 9 monopole, supporting 6no. antennas, 2no. equipment cabinets, 1 no. electric meter cabinet, and ancillary development thereto.

The proposed height of 20m is essential in order to ensure the latest 4G and new 5G technologies are provided in the Belle Vue area. These latest technologies operate at higher frequency bands than older technologies such as 2G and 3G. The higher the frequency band the greater the radio signal is naturally weakened. This means that the effects of clutter are even more significant than for the provision of older technologies. As a result, a higher column is normally required to maintain the same coverage footprint. The latest 4G technology and new 5G service provision carry higher capacity and data speeds to the user, this leads to such antennas having to be positioned at a higher height than more standard antennae and in turn a taller antenna height for 5G service provision.

The antennas are proposed to be open and not shielded as this provides the optimal service provision to the surrounding area. If the antennas were to be shrouded, they would not be as efficient at providing

CEP Telecoms Ltd, 1a Station Court, Station Road, Guiseley, LS20 8EY
www.ceptelecoms.com

the latest technologies to this cell area. Thus an additional installation would likely to be required in this cell area which would lead to the proliferation of masts contrary to the NPPF.

The cabinets are designed to appear like other statutory undertakers equipment cabinets. They are small for telecommunications apparatus and are proposed to be coloured grey to assimilate with other commonly found equipment cabinets. The cabinets can be installed under the operators permitted development rights, but have been included on the plans and in the description in order to remain fully transparent.

We have considered alternative site options and discounted as follows:

- **D1 – Rooftop - St Peter's RC High School, Kirkmanshulme Lane, Belle Vue, Gorton, Manchester, Greater Manchester, England, M12 4WB, NGR: E: 387315, N: 395914** – A rooftop option was discounted from a planning perspective as the rooftop is at a low elevation and it is highly expected that a stub tower would be required to raise the height of the operators rooftop equipment. A stub tower at this location would become a visually prominent feature. The proposal is more robust from a planning perspective as it seeks to deploy a phase 9 monopole, a much more discrete design which would be less visually intrusive.
- **D2 – Greenfield - National Speedway Stadium, Penketh Avenue, Belle Vue, Gorton, Manchester, Greater Manchester, England, M18 7DG, NGR: E: 387656, N: 396064** – a greenfield base station at this location was discounted as the area is not flat. An installation at this location would have harmed structural integrity. The proposal is more vigorous as it is sited on the pavement which is more structurally sound.
- **D3 - National Speedway Stadium, Penketh Avenue, Belle Vue, Gorton, Manchester, Greater Manchester, England, M18 7DG, NGR: E: 387510, N: 396012** - A rooftop option was discounted from a planning perspective as the rooftop is at a low elevation and it is highly expected that a stub tower would be required to raise the height of the operators rooftop equipment. A stub tower at this location would become a visually prominent feature. The proposal is more robust from a planning perspective as it seeks to deploy a phase 9 monopole, a much more discrete design which would be less visually intrusive.
- **D4 - St Peter's RC High School, Kirkmanshulme Lane, Belle Vue, Gorton, Manchester, Greater Manchester, England, M12 4WB, NGR: E: 387362, 395879** – A streetworks option was discounted at this location as there were underground services identified at the front of the pavement. Considerations were given to moving the equipment to the rear of the pavement, however this was discounted as there are 2 gates leading out to the pavement which the equipment is expected to create pinch points against.
- **D5 - Aria Technology, 2, Belle Vue Avenue, Belle Vue, Longsight, Manchester, Greater Manchester, England, M12 4AS, NGR: E: 386952, N: 396001** – A streetworks option was explored in a highly commercial area, however it was discounted as it is sited outside of the target area. An installation at this location would not provide the target area with the desired level of coverage and would likely require an additional mast in another location to provide the target area with the desired level of coverage.
- **D6 – Rooftop - St Peter's RC High School, Kirkmanshulme Lane, Belle Vue, Gorton, Manchester, Greater Manchester, England, M12 4WB, NGR: E: 387249, N: 395918** – A

CEP Telecoms Ltd, 1a Station Court, Station Road, Guiseley, LS20 8EY
www.ceptelecoms.com

rooftop installation at this location was discounted from a build perspective as the rooftop is pitched. This would not be able to support the operator's rooftop equipment.

The proposal for this CK Hutchison Networks (UK) Ltd site has been designed within International Commission on Non-Ionising Radiation Protection (ICNIRP) public exposure guidelines. A certificate of ICNIRP compliance will be included within the planning submission.

Finally, we would be interested in any local stakeholders or groups that you consider would like to know more about our proposals and look forward to receiving your comments on the preferred option identified above. For your information pre-consultation letters and a set of plans have been sent to all of the Longsight councillors and the MP Afzal Khan

We look forward to receiving your response within 14 days of the date of this letter.

Yours sincerely
