Survey & Design – Site Survey

Si-Tec Drawing No GDA-01A – Proposed Single Storey Showroom & Storage

1. Introduction

The Arley Consulting Company Limited (TACCL) has been commissioned by Bob Schofield of Si-Tec Architectural on behalf of Armstrong Office Furnishings Limited to prepare a Preliminary Risk Assessment for land at 804 to 806 Oldham Road, Manchester.

The site is located in a predominantly industrial area some 3.5 km to the north-east of Manchester city centre. It comprises a vacant plot formerly occupied by a residential property/public house.

Si-Tec is preparing a planning application for the development of a single-storey commercial property (showroom and storage facility) at the site.

This preliminary risk assessment comprises a site walkover and the assessment of the environmental setting and historical development of the site, based on available records, in order to produce a preliminary conceptual site model to identify all potential pollutant linkages with respect to the approved redevelopment and the environmental setting, in accordance with current UK policy and guidance.

The conclusions and recommendations presented in this report are the result of our professional interpretation of the information obtained. TACCL reserves the right to amend the conclusions and recommendations if further information becomes available.

2. Site Description

The site is located on the corner of Oldham Road and Ridings Street, Newton Heath, Manchester, some 3.5 km to the north-east of Manchester city centre. It is situated in a predominantly industrial area.

The approximate National Grid Reference for the site is 386574, 400134.

The site boundaries and adjacent land use is described as follows:

North Oldham Road with commercial/industrial development beyond, including Bestway immediately to the north and a Shell petrol filling station to the north-west.

East An area of landscaping associated with the existing commercial/industrial property to the south.

South An existing commercial/industrial property (Johnson Controls – Product Demonstration & Learning Centre). Johnsons Controls is a fire alarm supplier.

West Ridings Street and an existing commercial property (Fine castings Limited). There is an engineer's yard and offices to the south-west (Burdens Civils).

The site is roughly rectangular in shape and occupies approximately 0.04 Ha. It is an area of vacant/derelict land, situated between an existing large industrial building and Oldham Road.

The site location illustrated on Drawings and Figures presented at Appendix J.

A site walkover/inspection was undertaken on 19 October 2020. A series of photographs are presented in Appendix I.

An existing topographic survey is also presented in Appendix J from which it can be seen that the ground level at the site is between 67.0 and 67.5 m AOD.

From the inspection and survey records for the site, it can be seen that the site is relatively flat and is heavily overgrown with shrubs and small trees. There is evidence of demolition rubble (eg bricks) at the surface with some litter and fly-tipped material.

The site boundaries are marked by palisade fencing on the eastern and southern sides, a large advertising hoarding on the eastern part of the northern boundary and elsewhere Herras fencing, damaged in places.

The survey (dated June 2017) also indicates a delapidated wall on part of the western boundary. This was not present during the inspection.

A series of manhole covers are present in the footpaths to the north and west of the site, but no services are shown on the site itself. A small brick building is located in the landscaped grounds to the north-east of the site, this is labelled as a '*gas governor*' on the survey drawing.

No potential sources of contamination or evidence of contamination was observed at the site, with the exception of the demolition rubble.

3. Site History

Copies of historic Ordnance Survey (OS) maps for the period 1848 to 2020 have been obtained from Landmark (Appendix A).

From the earliest edition maps it can be seen that the general area was sparsely developed around Oldham Road and Grimshaw Lane. Two railway lines were present 375 m to the north and 240m to the south-west, as well as the Rochdale Canal, some 300 m to the south-east. A brewery was located 170 m to the north of the site (later Newton Heath Brewery).

By the later 1800's the area had become heavily developed, the site itself appears to be part of area of residential properties which extended to the north-east (south of Oldham Road, south, south-west and west (on either side of Oldham Road). A tramway is shown on Oldham Road.

The site appears to be occupied by two properties a larger building occupying the end of a terrace of narrow buildings.

Anecdotal evidence suggests the site was actually occupied by a public house although this is not marked on the OS maps.

Numerous industrial premises are marked as follows:

Monsall (Railway) Sidings, 40 m N
Britannia Works, 90 m to the NNE
Wellington Mills (Cotton), 140 m NE
Gas Plant Works, 150 m SSE
Iron Works, 160 m NE
Victoria Works, 190 m W
Railway Foundry, 240 m NE
Cabinet Works, 260 SW
Iron Foundry, 270 m SW
Coal Yard, 270 m S
Dye Works, 275 m ESE & 320 m SE
Tannery, 300 m SW
Brickworks, 620 m E

Subsequent OS maps show an expansion of the residential development to the south, towards the Gas Plant Works.

The area remains largely the same until the 1950's. The 1955 edition map shows a garage developed on the northern side of Oldham Road to the north-north-east of the site.

By 1971 most of the residential properties around the site have been cleared although the site is still occupied, by two connected buildings. Also at this time, the railway sidings have scaled back and many of the heavy industry previously labelled are now simply marked as 'Works' or 'Factory'.

Further clearance of residential properties to the south-west is shown on the 1984 edition map and the area appears generally the same until 1993. The 1993 edition map shows a 'Works' building immediately to the south east of the site, the site itself appears to still be occupied by a residential property.

By 1999 the maps indicate the presence of numerous small and medium sized works, warehouses and depots.

The building on the site itself appears to be demolished and cleared some time between 2006 and 2020.

From Google Earth images (Appendix B) it can be seen that in 2000 the site was occupied by an L-shaped building with landscaped area to the east and an industrial unit to the south-east.

Part of the building is removed between 2005 and 2009 and the entire building is demolished and removed some time between 2009 and 2013. Since that time the site has become naturally revegetated with grass, and shrubs and trees.

4. Geology

The geological setting has been established from the British Geological Society (BGS) records including map extracts supplied by Landmark (Appendix C) and the BGS interactive map.

From these records it can be seen that the site is underlain by glacial Boulder Clay which in turn sits on undifferentiated Pennine Middle Coal Measures Formation (mudstone, siltstone and sandstone). The Newton Heath sandstone is shown outcropping to the north-east of the site.

No specific coal seams are shown on the available geological maps.

An area of undivided made ground are shown to the north and north-west (the former railway sidings). Other areas of made ground are also shown around the site.

The BGS records indicate that there are a series of confidential investigation boreholes immediately to the north of Oldham Road. The closest accessible borehole records are some 240 m to the north-north-west (Wilsons Brewery 2 – SD80SE81) and 250 m to the South-south-east (Manchester Corp Grimshaw Lane – SJ89NE).

The logs for these boreholes are provided at Appendix D and are summarised as follows. It should be noted both boreholes are quite old, the brewery borehole is dated 1884.

Borehole Ref SD80SE51

Clay with stones to	13.71 m
Gravel to	14.02 m
Clay with stones to	24.38 m
Black Shale to	29.26 m

Borehole Ref SJ89NE51

Made Ground to	1.22 m
Boulder Clay to	5.94 m

TACCL has been provided with a ground investigation report for the site. In August 2017 Mini Soil Surveys (MSS) carried out an investigation at the site to *'determine the foundation requirement'*.

MSS states that the proposed development comprises *'the construction of a three storey building on an area of vacant land which ... was the site of a former public house'*. MSS also reports that *'the cellar was filled with debris from the demolition works'*.

Four boreholes were drilled at the site to depths of between 4.3 and 5.0 m. The boreholes encountered made ground overlying glacial clay. The made ground is reported to be between 0.9 and 1.7 m thick, comprising *'sand, topsoil, ash, clinker, brick, gravel, roof slate fragments and soft organic clay'*.

MSS reports that *'the underlying natural clay was initially firm and rapidly became stiff and very stiff with increasing depth'*. A band of clayey sand was encountered in Borehole No 4 between the made ground and the underlying clay.

Copies of the borehole records and a location plan are presented in Appendix E. It is possible that the holes were located around the former building and therefore did not encounter the infilled cellar or any buried foundations, which might still be present.

According to Landmark the ground at the site is estimated to have the following soil chemistry based on BGS records:

Arsenic	15 – 25 mg/kg
cadmium	<1.8 mg/kg
Chromium	90 – 120 mg/kg
Lead	<100 mg/kg
Nickel	15 – 30 mg/kg

5. Mining & Ground Stability

According to the records supplied by Landmark in the EnviroCheck Report (Appendix F) there are no mineral sites eg quarries within 500 m of the site.

TACCL has been provided with a Coal Mining Report for the site (Ref 51002283766001, dated 1 May 2020) (Appendix G).

The Coal Authority reports that the site *'is in the surface area that could be affected by underground mining in 3 seams of coal at 140 m to 570 m depth, and last worked in 1964'. 'Any movement in the ground due to coal mining activity associated with these workings should have stopped by now'.*

TCA also notes that:

- the site *'is not within a surface area that could be affected by present underground mining'.*
- *'there are no recorded coal mine entries known to the Coal Authority with, or within 20 metres of the boundary of the property'.*
- *'the Coal Authority is not aware of any damage due to geological faults or other lines of weakness'.*
- *'the property is not within the boundary of an opencast site from which coal has been removed by opencast methods'.*
- *'the Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994'.*
- *'the Coal Authority has no record of a mine gas emission requiring action'.*

Additional information has been obtained from the Coal Authority website, as follows:

- The site is in a defined *'coal mining reporting area'.*

- The site is not in a '*development high risk area*', although an area is defined to the south-east of the site.
- There are no mine entries within influencing distance of the development site.
- There are no fissures or break lines within influencing distance of the development site.
- There are no '*coal seam*' subcrops beneath the site. Some seams are identified to the south-west of the site, but not in close proximity.
- There is no record of '*past surface mining*' in the vicinity of the site.
- There are no '*past shallow coal mine workings*' at the site. The closest identified shallow workings are to the south-west.
- There are no '*probable shallow coal mine workings*' beneath the site or within influencing distance.

Copies of the Coal Authority images are presented in Appendix H.

The Envirocheck Report also contains information on ground stability, as summarised below:

Collapsible Ground Stability Hazards:	Very Low
Compressible Ground Stability Hazards:	No Hazard
Ground Dissolution Stability Hazards:	No Hazard
Landslide Ground Stability Hazards:	Very Low
Running Sand Ground Stability Hazards:	Very Low
Shrinking or Swelling Clay Ground Stability Hazards:	Very Low

It can be seen from above that risks associated with subsidence are very low to no hazard and these issues are not considered further.

6. Hydrogeology

The Envirocheck Report contains information on the environmental setting of the site and the groundwater information here has been sourced from the EA Groundwater Vulnerability Map.

The glacial clay that underlies the site is classified by the EA as a *'Secondary Undifferentiated Aquifer'*. This classification is given where it has not been possible to attribute the aquifer as *'Secondary A'* or *'B'*.

It should be noted however that in TACCL's experience Boulder Clay will have a very low natural permeability and will actually be unproductive strata. This clay will act as a barrier to the migration of contamination from off-site sources.

The Coal Measures strata are classified as a *'Secondary A Aquifer'*.

Secondary A Aquifers are described as *'permeable layers capable of supporting water supplies at local rather than strategic scale, and in some cases forming an important source of base flow to rivers'*.

The site is not within a currently defined source protection zone.

There are two groundwater abstractions within 1 km of the site, as follows:

Hanson Quarry Products abstracts groundwater from boreholes located 332 m to the south of the site. The water is used for *'construction general use'*.

Watney Mann (North) abstracts groundwater from two boreholes located 735 m to the north-east of the site. The water is used for *'cooling and manufacturing'* uses.

According to Landmark there is *'potential for groundwater flooding to occur at the surface'* of the site, although the site is at the projected boundary with an area where there is *'limited potential'*.

7. Hydrology

There are no surface water features in the vicinity of the site. Landmark reports that the closest surface water feature (Rochdale Canal) is located some 294 m to the south-east.

Moston Brook is located some 870 m to the north-west.

There are no current surface water abstractions within 1 km of the site.

According to Landmark, the site is not located in an area that may be affected by flooding from rivers or sea without defences.

United Utilities has a discharge consent for the discharge of public sewage: storm sewage overflow to a freshwater stream/river (Shooters Brook) located 466 m south of the site.

There are no recorded pollution incidents to controlled waters within 500 m of the site.

8. Landfill Sites & Contaminated Land

Information provided in the Envirocheck Report indicates there are no historic, local authority recorded or registered landfill sites within 500 m of the development site.

There are three current licensed waste management facility within 250 m.

James Moore Ltd operates a large waste transfer station at Oldham Road, 165 m to the south-west.

European Metal Recycling operates a mixed metal recycling site at Irlam Street, some 170 m to the south-west of the site.

BA Hibbert (previously TJ McIvor) operates a very small waste transfer station at Old Leaches yard, 225 m to the west of the site

Recon Packaging operates a material recycling treatment facility at Navigation Trading Estate some 271 m to the east of the site.

Northbank Demolition operates an inert and excavation waste treatment site on land adjacent to 498 Oldham Road, some 347 m to the west of the site.

In addition, Landmark identifies areas of potentially infilled land. Four specific areas are identified within 250 m of the site, as follows:

Unknown filled ground (pond, marsh, river, stream, dock etc)

27 m E (1848)	Possible former stream now beneath the industrial premises immediately to the south-east of the site.
---------------	---

67 m S (1848)	Possible former pond. Redeveloped for residential use circa 1893 and currently part of a car park.
---------------	--

176 m SE (1848)	Possible former stream now covered by an industrial unit.
-----------------	---

235 m NE (1954) Possible former pond now covered by Fletcher Street.

Given the age of these features and the fact that each has been built over either with residential or industrial premises or a road the risk from ground gas associated with these former ponds and streams if they were infilled is considered to be very low.

Other sites are identified beyond 250 m, but these are considered to be too far away to have had any impact on the development site.

Landmark provides details of potentially contaminative land uses in the vicinity of the site. According to these records there are:

- no integrated pollution prevention and control sites within 250 m of the development site,
- a fuel station (Shell Service Station) located 56 m to the west of the site
- two local authority pollution prevention and control sites within 250 m of the site, as follows: Tcs Monsall (petrol filling station) 56 m to the west and Sapphire Garage (respraying road vehicles) 152 m to the north-east.
- no COMAH (control of major accident hazards) sites within 500 m
- no NIHHS (notification of installations handling hazardous substances) sites within 300 m
- numerous contemporary trade directory entries for sites within 250 m of the site. These include Fine castings (Fireplaces and Mantelpieces) some 21 m to the south-west, Maxi Haulage and car wash 56 m to the west and unspecified works 45 and 53 m to the south-east.

There is one substantiated pollution incident which occurred on 14 May 2004, some 146 m to the south of the site. This incident is reported to relate to organic chemicals – other organic waste and the reported impacts are as follows:

Water Impact:	No Impact
Air Impact:	Minor Impact
Land Impact:	Significant Impact

It is highly unlikely that this event will have affected the ground conditions at the site.

9. Radon

The Building Research Establishment (BRE) has issued guidance *‘for reducing the concentration of radon in new dwellings, hence reducing the risk to occupants of exposure to radon’*.

Using the maps contained in the BRE guidance document it can be seen that the site is not located in an area that may be affected by radon.

According to Landmark *‘the property is in a lower probability radon area (less than 1% of homes are estimated to be at or above the action level)’* and consequently *‘no radon protection measures are required in the construction of new dwellings or extensions’*.

10. Sensitive Land Uses

The site is not affected by any of the ecological systems identified as a statutory receptor in the DETR Circular 01/2006.

11. Proposed Development

It is proposed to construct an industrial unit at the site, for use as a showroom with internal storage.

The proposed site layout is shown on SITEC Drawing No GDA/01A presented at Appendix J.

From the drawing it can be seen that the building will contain a reception area and welfare facilities, a showroom in the front (northern section) with a large storage area to the rear (south). The total reported area of the building is 192.4 m².

12. Preliminary Conceptual Model

The Environment Act 1995 makes provision for a risk-based framework for the identification, assessment and management of potentially contaminated land through the assessment of risk.

The process of risk assessment is an evaluation of the probability of harm, and comprises the identification of sources of contamination, receptors that may be affected by the contamination and pathways by which the receptors may be harmed.

In this section of the report TACCL provides a qualitative assessment of risks based on potential contamination, plausible pathways and all significant receptors.

The risk assessment is based upon the proposed development. Should the nature of development change or the activities undertaken on the site alter in the future the environmental assessment should be reviewed and altered accordingly.

Potential Contaminative Sources

The site is reported to have been a public house/residential property constructed around 1893. The surrounding houses were cleared by 1971.

At that time there was a lot of heavy industry in the general area, including railway sidings, iron works, foundry to the north, a gas work and coal yard to the south.

Following clearance of the surrounding residential properties the area has been redeveloped for a mix of commercial and industrial uses. Immediately to the south of the site is occupied by an existing commercial/industrial property (Johnson Controls – Product Demonstration & Learning Centre). Johnsons Controls is a fire alarm supplier.

The building was demolished sometime between 2009 and 2013 and has become overgrown. It is reported that the pub cellar was backfilled with demolition rubble.

Boreholes drilled around the development site prove between 0.9 and 1.7 m of made ground, comprising '*sand, topsoil, ash, clinker, brick, gravel, roof slate fragments and soft organic clay*' which overlies glacial clay.

It is likely that the made ground contains elevated levels of contamination but the potential for the levels to exceed published assessment criteria for commercial and industrial land use is considered to be low.

There were numerous off-site sources of potential contamination in the general area. It is considered highly likely that the general ground conditions in the area are similar to those at the development site and highly unlikely that surrounding ground conditions will represent a potential hazard to the proposed development.

- Hazardous Gas

There are no landfill sites within 250 m of the site.

Landmark has identified areas of potentially 'infilled ground' within 250 m although most of these have been redeveloped and are presently occupied by other commercial/industrial developments.

The natural glacial clay strata would severely limit the migration of hazardous gases from any potential off-site source should they actually exist.

Boreholes drilled at the site encountered some topsoil, ash, clinker, and soft organic clay which represent a potential source of hazard gases.

The site is underlain, at depth, by coal bearing strata, although these are present beneath a significant thickness of glacial clay which would act as a barrier to mine gas migration.

Risks from hazardous gas are considered to be Low to Moderate.

TACCL is advised by the developer's architect that gas mitigation measures will be installed to protect the property and its occupants. These measures include a gas resistant membrane will afford the required protection and as a result residual risks associated with gas will be Very Low.

- **Conclusions**

Based on the available information, reviewed as part of this assessment, the potential for significant contamination to be present at the site is considered to be Low to Moderate.

Potential Contaminative Pathways

The following potential contamination pathways may exist based on the potential contaminants of concern, the environmental setting and the proposed residential development:

1. Ingestion of contaminated soil
2. Inhalation of contaminative dust/vapours
3. Ingestion of homegrown vegetable/soil attached to vegetables
4. Physical contact
5. Asphyxiation or explosion resulting from build-up of hazardous gases.

Potential Receptors

The potential receptors listed below are relevant considering the proposed development of the site.

Receptors that may be affected by potential contamination are:

1. Future Site Users
2. Buildings and Structures
3. Controlled Waters
4. Adjacent Properties
5. Construction Workers

No controlled waters have been identified in proximity to the site therefore this receptor may be discounted for the development site under consideration.

Risk Assessment

The assessment of risk is based on the concept of the source – pathway – receptor linkage.

Risks posed to each of the identified potential receptors are discussed separately below in accordance with CIRIA Guidance Document: Contaminated Land Risk Assessment – A Guide to Good Practice.

An environmental risk rating of Negligible, Very Low, Low, Moderate or High has been assigned to each identified receptor.

Future Site Users

The site has been used for residential/public house use since late 1800's. The buildings were demolished and cleared between 2009 and 2013.

The potential risk to future site users is considered to be Very Low.

Buildings and Structures

Potential risk to buildings and structures due to contaminated ground or hazardous gas is considered to be Very Low.

Controlled Waters

There are no controlled waters in the vicinity of the site.

Therefore, there can be no potential risk of contamination associated with the site.

Adjacent Properties

The potential risk to the existing neighbouring property and people is considered to be Negligible.

Construction Workers

It is reported that there was a basement or cellar at the property and that this has been filled with demolition rubble. Furthermore, some of the geological records suggest there may be a layer of made ground in the general area.

It is considered unlikely that any made ground contains significant contamination although this should not be ruled out as a possibility.

In the event that contaminated made ground is present at shallow depth beneath the site construction workers exposure to potential contaminants of concern would be severely limited (during the short lifetime of the development works).

Notwithstanding the above construction workers should adopt standard health & safety precautions including appropriate personal protective equipment (PPE).

The potential risk to the construction workers is considered to be Very Low.

13. Conclusions & Recommendations

TACCL was commissioned by Bob Schofield of Si-Tec Architectural on behalf of Armstrong Office Furnishings Limited to prepare a Preliminary Risk Assessment for land at 804 to 806 Oldham Road, Manchester.

The report is required to support a planning application for the construction of a new commercial property.

TACCL has assessed the degree of risk posed by the site surrounding land and conclude that the potential risks are Very Low as long as precautionary gas mitigation measures are built into the foundations of the building.

Gas mitigation measures should meet CIRIA Characteristic Situation 3.

TACCL therefore considers that no specific Phase 2 ground investigation is required.

However, the developer should inspect any excavations for foundation and services to confirm that the anticipated conditions exist, ie rubble filled cellars overlying glacial Boulder clay.

In the event that potentially contaminated made ground, other than that expected from cellars backfilled with demolition rubble and as identified in the MSS boreholes, is identified during construction works the developer should take further specialist advice which may include soil sampling, analysis and review of results against appropriate assessment criteria.

LANDMARK INFORMATION GROUP[®]

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Manchester
Published 1975
Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

VectorMap Local

Published 2020

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Lancashire And Furness

Published 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Map Name(s) and Date(s)

104_03 1893 1:2,500	104_04 1893 1:2,500
104_07 1893 1:2,500	104_08 1893 1:2,500

Supply of Unpublished Survey Information

Published 1975

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Geology 1:10,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:10,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around a site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page.

Please Note: Not all of the layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

- Artificial ground includes:
- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
 - Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
 - Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
 - Landscaped ground - areas where the surface has been reshaped.
 - Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes founded strata, where the ground has collapsed due to subsidence.

Superficial Geology

BGS 1:10,000 Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults and thin beds mapped as lines such as coal seams and mineral veins. These are not restricted by age and could relate to features of any of the 1:10,000 geology datasets.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:10,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Coal Mining Report

The Coal
Authority

CON29M

coal mining report

804-806 OLDHAM ROAD, NEWTON HEATH, MANCHESTER, LANCASHIRE
M40 2AB

Known or potential coal mining risks

Past underground coal mining	Page 3
Future underground coal mining	Page 3
Withdrawal of support	Page 5

Further action

No further reports from the Coal Authority are required. Further information on any next steps can be found in our Professional opinion.

For more information on our reports please visit
www.groundstability.com

Professional opinion

According to the official mining information records held by the Coal Authority at the time of this search, evidence of, or the potential for, coal mining related features have been identified. It is unlikely that these features will impact on the stability of the enquiry boundary.

Detailed findings

Information provided by the Coal Authority in this report is compiled in response to the Law Society's CON29M Coal Mining enquiries. The said enquiries are protected by copyright owned by the Law Society of 113 Chancery Lane, London WC2A 1PL.

The Coal Authority owns the copyright in this report and the information used to produce this report is protected by our database rights. All rights are reserved and unauthorised use is prohibited. If we provide a report for you, this does not mean that copyright and any other rights will pass to you. However, you can use the report for your own purposes.

1 Past underground coal mining

The property is in a surface area that could be affected by underground mining in 3 seams of coal at 140m to 570m depth, and last worked in 1964.

Any movement in the ground due to coal mining activity associated with these workings should have stopped by now.

2 Present underground coal mining

The property is not within a surface area that could be affected by present underground mining.

3 Future underground coal mining

The property is not in an area where the Coal Authority has received an application for, and is currently considering whether to grant a licence to remove or work coal by underground methods.

The property is not in an area where a licence has been granted to remove or otherwise work coal using underground methods.

The property is not in an area likely to be affected from any planned future underground coal mining.

However, reserves of coal exist in the local area which could be worked at some time in the future.

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

4 Mine entries

There are no recorded coal mine entries known to the Coal Authority within, or within 20 metres, of the boundary of the property.

5 Coal mining geology

The Coal Authority is not aware of any damage due to geological faults or other lines of weakness that have been affected by coal mining.

6 Past opencast coal mining

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

7 Present opencast coal mining

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

8 Future opencast coal mining

There are no licence requests outstanding to remove coal by opencast methods within 800 metres of the boundary.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

9 Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

10 Mine gas

The Coal Authority has no record of a mine gas emission requiring action.

11 Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Coal Authority, under its Emergency Surface Hazard Call Out procedures.

12 Withdrawal of support

The property is in an area where a notice to withdraw support was given in 1963.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

13 Working facilities order

The property is not in an area where an order has been made, under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

14 Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Statutory cover

Coal mining subsidence

In the unlikely event of any coal mining related subsidence damage, the Coal Authority or the mine operator has a duty to take remedial action in respect of subsidence caused by the withdrawal of support from land or property in connection with lawful coal mining operations.

When the works are the responsibility of the Coal Authority, our dedicated public safety and subsidence team will manage the claim. The house or land owner ("the owner") is covered for these works under the terms of the Coal Mining Subsidence Act 1991 (as amended by the Coal Industry Act 1994). Please note, this Act does not apply where coal was worked or gotten by virtue of the grant of a gale in the Forest of Dean, or any other part of the Hundred of St. Briavels in the county of Gloucester.

If you believe your land or property is suffering from coal mining subsidence damage and you need more information on what to do next, please use the following link to our website which sets out what your rights are and what you need to consider before making a claim.

www.gov.uk/government/publications/coal-mining-subsidence-damage-notice-form

Coal mining hazards

Our public safety and subsidence team provide a 24 hour a day, 7 days a week hazard reporting service, to help protect the public from hazards caused by past coal workings, such as a mine shaft or shallow working collapse. To report any hazards please call **01623 646 333**. Further information can be found on our website: www.gov.uk/coalauthority.

Glossary

Key terms

adit - horizontal or sloped entrance to a mine

coal mining subsidence - ground movement caused by the removal of coal by underground mining

Coal Mining Subsidence Act 1991 - the Act setting out the duties of the Coal Authority to repair damage caused by coal mining subsidence

coal mining subsidence damage - damage to land, buildings or structures caused by the removal of coal by underground mining

coal seams - bed of coal of varying thickness

future opencast coal mining - a licence granted, or licence application received, by the Coal Authority to excavate coal from the surface

future underground coal mining - a licence granted, or licence application received, by the Coal Authority to excavate coal underground. Although it is unlikely, remaining coal reserves could create a possibility for future mining, which would be licensed by the Coal Authority

mine entries - collective name for shafts and adits

payments to owners of former copyhold land - historically, copyhold land gave rights to coal to the copyholder. Legislation was set up to allow others to work this coal, but they had to issue a notice and pay compensation if a copyholder came forward

shaft - vertical entry into a mine

site investigation - investigations of coal mining risks carried out with the Coal Authority's permission

stop notice - a delay to repairs because further coal mining subsidence damage may occur and it would be unwise to carry out permanent repairs

subsidence claim - a formal notice of subsidence damage to the Coal Authority since it was established on 31 October 1994

withdrawal of support - a historic notice informing landowners that the coal beneath their property was going to be worked

working facilities orders - a court order which gave permission, restricted or prevented coal mine workings
