SUMMARY

1 SUMMARY

Quality Engineering Design Ltd will apply and liaise with BT Openreach Property Development Department for new sites to bring in all required incoming Telecommunications, Fibre and all associated ducting into the property for both the internal and external infrastructure.

Virgin Media can also be applied for if required by the client.

This will provide the following:

- The infrastructure that delivers standard telephony services
- A cable television network
- A dedicated 'multi-services' broadband network
- Mobile telephony, wireless and satellite to offer flexibility

BT Openreach will be served by Fibre to the Premises (FTTP).

The information needed before registering includes:

- Dates - your site start and required service dates
- Location – site address and ordnance survey grid references
- What is being built – number of plots and their type (house or flat), and if it's part of a larger development or you have several phases, let us know so that we can build from the start, the capacity we need for your site
- Contact details – which company is building the new properties, on site contacts and who to contact if we have a question
- Plans - It's important to give us simple plans without unnecessary detail – we don't need the architectural view of the site such as landscaping details. PDFs with removable layers are preferable.
