

Event Management Strategy: Circle Square public realm

Date: 25/01/2023

In response to: We have consulted with our Highways Events and Coordination Team and the only request they have is that should there be any events that have a large capacity and where queues may form on the public footway then control plans will need to be provided.

As set out in the Event Management Strategy it will only ever be the intention for events hosted at Circle Square to take place within Symphony Park. The aim is for event activity to be located within the centre of the site therefore any associated queuing systems will sit within this area as a way to minimise the impact on the surrounding public highways.

The revised strategy doesn't include any large scale ticketed events that would require the whole estate to be cordoned off which would then introduce the need for queueing systems to be placed on the perimeter of the site. The intention is to always have event activity that is free flowing, accessible and inclusive to all without sectioning off the whole of the estate. If an event is ticketed it will be confined to Symphony Park and a queueing system will be put in place within this area.

The below site plan indicates where potential ticketed event activity and associated queuing system will take place within Symphony Park.
