Re: Crossley Street, Gorton Interim Soil Validation Letter Report –Validation of Plots 3-13 & 18-23

Dear Graham,

Introduction:

Met Engineers have been contracted by Meares Group Plc to carry out the soil Validation works at the above site. The scope of works is based on the Phase 2 Site Investigation report (ref. 069912-CUR-00-XX-RP-GE-001) by Curtins Consulting Limited dated 17th December 2018, and the subsequent Phase 3 Remediation Statement (ref. P20-00073-Met-RP-GE-001) by Met Engineers dated 3rd March 2020 to satisfy Manchester City Council Planning Reference: 122797/FO/2019 as amended by 129169/NMC/2021.

The initial intrusive investigation recorded elevated levels of lead, PAH and TPH. Asbestos fibres (<0.001%) were also identified in 1№ of the soil samples tested.

3№ gas monitoring visits were initially undertaken by Curtins Consulting Limited and this confirmed Characteristic Situation (CS) 1 conditions with no gas protection measures proposed. A supplementary gas risk assessment was carried out by Curtins Consulting Limited (ref: 069912-CUR-00-XX-CO-GE-00002-V01_Fee Proposal) in a letter dated 22nd April 2020 which confirmed the gas classification of CS1.

It is understood that the EHO previously raised queries regarding TPH concentrations in TP08 and TP10. In email correspondence provided to Met Engineers Ltd on 29th October 2021, dated between 27th March to 7th April 2020, between Curtins Consulting Limited and Mears Group Plc it was confirmed that the removal of 600mm surface material would effectively remove the contaminated material recorded in TP08 and TP10. It was also confirmed that levels recorded within TP10 do not exceed the relevant guideline values.

The client has retained copies of all email correspondence related to the project which can be provided as an addition to this letter report upon request.

Summary of Proposed Remediation:

Based on the findings of the Phase II Site Investigation report, it was proposed to install 600mm of clean capping material as detailed within the Met Phase III Remediation Statement dated 3rd March 2020. Based on the site investigation logs, it was considered likely that the site strip would remove all Made Ground material from the central area of the site where <0.001% asbestos fibres were previously identified in 1№ sample. It was initially proposed to carry out additional sampling around this location following the removal of all Made Ground to confirm no asbestos fibres remained in this area. During the first validation visit carried out by Met Engineers Ltd on 27th October 2021, it was confirmed that nominal amounts of Made Ground remained at the surface in this area, therefore the supplementary

sampling was not carried out. Instead, it was confirmed a high-visibility membrane should be installed as a marker layer around the previous WS03 where Made Ground remains. It was also recommended this membrane should be installed in the area around TP08 still to be completed due to the potential for TPH to remain in the surface soils immediately beneath the proposed 600mm capping layer. Validation of these areas will be carried out as part of a supplementary letter report.

Exported Material:

Based on reduced level dig photographs it is determined that sufficient material has been removed from the site within plots 3-13 and 18-23 to facilitate a capping of 600mm of topsoil. Photographs of the site strip in these areas are provided in Appendix I.

To date, approximately 5,100 tonnes of material have been removed from site as part of the site strip and enabling works; approximately 4,900 tonnes of this material is recorded as spoil, 80 tonnes as stone, 40 tonnes as soil and stone, 40 tonnes as sand and 40 tonnes as contaminated soil. The exported material tickets are provided within Appendix II.

Imported Material:

It was proposed to import topsoil material supplied by Cheshire Soils and Aggregates Limited from a site in Halewood, Liverpool, L26 3UA. It is understood from Cheshire Soils and Aggregates Ltd that Halewood is a greenfield site. Confirmation is provided in the email contained within Appendix III. Based on the requirements Yorkshire and Lincolnshire Pollution Advisory Group (YALPAG) Document – Verification Requirements for Cover Systems it is recommended that for a greenfield/manufactured source 1№ sample per 250m³, or 3№ samples be taken per source, whichever is greater. As such, prior to the material being imported to the site, Met Engineers attended Halewood on 20th September 2021 and collected 11№ samples of the topsoil material. Photographs of this topsoil stockpile are included in Appendix III.

These samples were submitted for laboratory testing for Heavy Metals (CLEA 9), Poly Aromatic Hydrocarbons (PAH -USEPA 16), Asbestos, and Soil Organic Matter. The results were screened against Land Quality Management S4UL's for all contaminants except Lead, for which there is no S4UL available. Results for Lead have been screened against DEFRA C4SL's. A conservative soil organic matter content of 1% has been assumed and the guideline values are based on a 'Residential with Homegrown Produce' land use. No exceedances were identified within the topsoil, and the material is therefore considered suitable for use at the Crossley Street, Gorton development.

The screened laboratory results can be found in Appendix IV, with laboratory certificates included in Appendix V.

Met Engineers have been supplied topsoil transfer tickets that show that a total of 1,240m^3 of this soil has been imported to date. This assumes a conversion of 1 tonne of soil per m^3 to provide a conservative frequency of testing for imported material. The transfer tickets are provided in Appendix VI of this report.

Summary of 1st Validation Visit – 27.10.21:

It is proposed to carry out the validation works at the above site over a number of visits. This letter report provides the results of the first visit, confirming the depth of topsoil placed in the garden areas of plots 3-11 & 18-23. The proposed validation works for the whole site are shown on the plan provided in Appendix VII. This plan also shows the locations of the hand dug pits carried out to date.

Met®
CONSULTANCY GROUP

Southgate House, Pontefract Road, Stourton, Leeds, LS10 1SW
Tel: + (0)113 200 8900 E: admin@metconsultancygroup.com
W: www.metconsultancygroup.com

Met Engineers attended site on 27th October 2021 and carried out a total of 8№ hand dug pits in the garden areas; 5№ hand dug pits within the front and rear garden areas of plots 3-10 and 3№ hand dug pits within the rear gardens of plots 18-23. Met Engineers were unable to validate plot 11 during this visit due to a stockpile of topsoil in covering the area of plots 11-15 (photographs provided in Appendix IX). Therefore, Meares Group Plc undertook 1№ hand dug pit within the rear garden area of this plot on 3rd November 2011, when this topsoil stockpile was removed.

The hands dug pits concluded that a minimum of 600mm topsoil has been placed in the garden areas of plots 3-13 & 18-23, with the exception of HDP07 and HDP08 which were undertaken in the front garden areas of plots 3 and 8. A total of 350mm and 400mm of topsoil has been places in these areas respectively so as not to undermine the concrete foundations. The photographs of the hand dug pits are provided in Appendix VIII, and photographs of the completed garden areas are provided in Appendix X.

I trust this is acceptable, however if you have any queries, please do not hesitate to contact me.

Yours sincerely,

Yasemin Kolsuz
Assistant Engineer
For and on behalf of Met Consultancy Group

The following documents are appended to this letter:

- Appendix I - Reduced Level Dig Photographs
- Appendix II - Exported Material Tickets (9th March 2020 – 23rd April 2020)
- Appendix III - Photographs of Halewood Topsoil Stockpile and Greenfield Source Confirmation
- Appendix IV - Screened Topsoil Laboratory Testing Results
- Appendix V - Laboratory Certificates
- Appendix VI - Imported Material Tickets (6th October 2021 – 21st October 2021)
- Appendix VII - Validation Plan
- Appendix VIII - Hand Dug Pit Photographs
- Appendix IX - Photographs of Topsoil Stockpile in Area of Plots 11-15
- Appendix IX - Photographs of Completed Garden Areas

Appendix III – Photographs of Halewood Topsoil Stockpile and Greenfield Source Confirmation

From: dave@cheshiresoils.co.uk [mailto:dave@cheshiresoils.co.uk]
Sent: 17 September 2021 15:25
To: brian@bakcivilengineering.co.uk
Subject: Halewood topsoil

Hi Brian,

Further to our conversation I can confirm:

Halewood is a "greenfield" site.

Have a good weekend

Kind Regards

David Bodily

REPORT NOTES

General
This report shall not be reproduced, except in full, without written approval from Envirolab.
The results reported herein relate only to the material supplied to the laboratory.
The residue of any samples contained within this report, and any received with the same delivery, will be disposed of six weeks after initial scheduling. For samples tested for Asbestos we will retain a portion of the dried sample for a minimum of six months after the initial Asbestos testing is completed.
Analytical results reflect the quality of the sample at the time of analysis only.
Opinions and interpretations expressed are outside the scope of our accreditation.
If results are in italic font they are associated with an AQC failure, these are not accredited and are unreliable.
A deviating samples report is appended and will indicate if samples or tests have been found to be deviating. Any test results affected may not be an accurate record of the concentration at the time of sampling and, as a result, may be invalid.
The Client Sample No, Client Sample ID, Depth to Top, Depth to Bottom and Date Sampled were all provided by the client.

Soil chemical analysis:
All results are reported as dry weight (<40°C).
For samples with Matrix Codes 1 - 6 natural stones, brick and concrete fragments >10mm and any extraneous material (visible glass, metal or twigs) are removed and excluded from the sample prior to analysis and reported results corrected to a whole sample basis. This is reported as '% stones >10mm'.
For samples with Matrix Code 7 the whole sample is dried and crushed prior to analysis and this supersedes any “A” subscripts
All analysis is performed on the sample as received for soil samples which are positive for asbestos or the client has informed asbestos may be present and/or if they are from outside the European Union and this supersedes any "D" subscripts.

TPH analysis of water by method A-T-007:
Free and visible oils are excluded from the sample used for analysis so that the reported result represents the dissolved phase only.

Electrical Conductivity of water by Method A-T-037:
Results greater than 12900µS/cm @ 25°C / 11550µS/cm @ 20°C fall outside the calibration range and as such are unaccredited.

Asbestos:
Asbestos in soil analysis is performed on a dried aliquot of the submitted sample and cannot guarantee to identify asbestos if only present in small numbers as discrete fibres/fragments in the original sample.
Stones etc. are not removed from the sample prior to analysis.
Quantification of asbestos is a 3 stage process including visual identification, hand picking and weighing and fibre counting by sedimentation/phase contrast optical microscopy if required. If asbestos is identified as being present but is not in a form that is suitable for analysis by hand picking and weighing (normally if the asbestos is present as free fibres) quantification by sedimentation is performed. Where ACMs are found a percentage asbestos is assigned to each with reference to 'HSG264, Asbestos: The survey guide' and the calculated asbestos content is expressed as a percentage of the dried soil sample aliquot used.

Predominant Matrix Codes:
1 = SAND, 2 = LOAM, 3 = CLAY, 4 = LOAM/SAND, 5 = SAND/CLAY, 6 = CLAY/LOAM, 7 = OTHER, 8 = Asbestos bulk ID sample, 9 = INCINERATOR ASH.
Samples with Matrix Code 7 & 8 are not predominantly a SAND/LOAM/CLAY mix and are not covered by our BSEN 17025 or MCERTS accreditations, with the exception of bulk asbestos which are BSEN 17025 accredited.
Secondary Matrix Codes:
A = contains stones, B = contains construction rubble, C = contains visible hydrocarbons, D = contains glass/metal, E = contains roots/twigs.

Key:
IS indicates Insufficient Sample for analysis.
US indicates Unsuitable Sample for analysis.
NDP indicates No Determination Possible.
NAD indicates No Asbestos Detected.
N/A indicates Not Applicable.
Superscript # indicates method accredited to ISO 17025.
Superscript "M" indicates method accredited to MCERTS.
Subscript "A" indicates analysis performed on the sample as received.
Subscript "D" indicates analysis performed on the dried sample, crushed to pass a 2mm sieve

Please contact us if you need any further information.

Envirolab Deviating Samples Report

Units 7&8 Sandpits Business Park, Mottram Road, Hyde, SK14 3AR
Tel. 0161 368 4921 email. ask@envlab.co.uk

Client: MET Engineers Ltd, Southgate House, Pontefract Road, Leeds, LS10 1SW

Project No: 21/10259

Date Received: 22/09/2021 (am)

Project: Halewood Topsoil

Cool Box Temperatures (°C): 15.6

Clients Project No: P20-00073

NO DEVIATIONS IDENTIFIED with respect to sampling dates or containers received.

Note: If, at any point before reaching the laboratory, the temperature of the samples has breached those set in published standards, e.g. BS-EN 5667-3 (for water samples 5 ± 3°C), ISO 18400-105:2017, then the concentration of any affected analytes may differ from that at the time of sampling.

Appendix VII – Validation Plan

This drawing and the copyright in it are the property of Met Engineers Limited. It must not be parted from or copied in whole or in part or used as the basis for any other drawing or reproduced three dimensionally without the consent in writing from Met Engineers Limited and it must be returned to them on request.

1. Do not scale dimensions from this drawing in either paper or electronic format.
2. To be read in conjunction with all relevant Engineer's, Architect's and Other drawings and specifications.
3. All building products to be used in strict accordance with the manufacturer's recommendations.
4. Any discrepancies are to be reported to the Engineer immediately.
5. Main Contractor to provide a detailed method statement for all works prior to commencement on site.

Completed hand dug validation pit confirming the depth of topsoil placed meets the requirements for capping

Proposed hand dug validation pit (16No. remaining)

Sufficient Made Ground to be removed to leave soft landscaped areas 600mm below final levels. Levels to be made up with clean and certified* imported or re-used subsoil and imported topsoil.

* All material used within the top 600mm should be tested in accordance with YALPAG Verification requirements for cover systems and Section 4.2 of the Remediation Statement.

Should natural clays be encountered at <600mm during the site strip, these should be tested in accordance with the above guidance to confirm suitability for use within the capping layer
